FEED REQUIRED FOR CHICKENS

FROM TIME TO TIME WE RECEIVE INQUIRIES ASKING HOW MUCH FEED IS REQUIRED FOR PRODUCING CHICKENS, SAYS THE IOWA HOMESTEAD. THESE PEOPLE APPRECIATE THAT THE FEED COST IS ONE OF THE IMPORTANT CONSIDERATIONS IN RAISING POULTRY. TOO OFTEN PEOPLE BELIEVE THAT IT IS THE WHOLE COST, FOR SOME DO NOT MAKE ALLOWANCE FOR OTHER COSTS, SUCH AS MORTALITY, DEPRECIATION ON BUILDINGS, LABOR, ETC.

The Connecticut experiment station determined the amount of feed which was required to grow White Leghorns and Rhode Island Red chicks till they were 24 weeks of age. At that age Leghorns had consumed 22.15 pounds per bird and the Red 26.77 pounds. The Leghorns weighed 3.23 pounds and the Red 4.3 pounds per bird.

The Indiana station reports that it took approximately 30 pounds of feed to raise White Rock pullets to 28 weeks of age. From these two reports it would seem likely that average amounts of feed needed to reach maturity would be approximately 25 pounds for Leghorns and from 30 to 35 pounds for the heavy breeds.

Some figures are also available on the amount of feed that will be consumed by hens in a year. The smaller breeds require less than the larger breeds and hens that do not lay heavily will consume less than those that are heavy layers. Heavy laying Leghorns will consume approximately 75 pounds of feed yearly per hen, while the heavier breeds will need about 85 pounds.

Skim Milk Recognized Feed for All Poultry

Skim milk is a recognized feed for poultry from the baby chick on up to the laying pullet, and as a supplement to either home-grown feeds or the commercial product, it is recommended by successful poultrymen and specialists the world over.

Those engaged in the poultry business must necessarily have high production. Unless they have an abundance and a variety of feeds and know how properly to mix them, the commercial feed must be used. This is also the case with every farmer who seeks high production.

Preventing Egg Losses Is Not Difficult Task

The season is near at hand for converting feed crops into eggs. No one wants to put labor into the production of feeds and then lose their value. It is estimated that about 17 per cent of the eggs shipped to wholesale markets have no commercial value because of their being dirty, broken, or having chick development, or being shrunken, rotten or moldy.

No Difficulty Is Met in Picking Out Layers

No difficulty should be met in picking out the best-laying or the poorest-laying hens in the farm flock. With some birds, however, the distinguishing marks are not so distinct and may sometimes be rather contradictory.

Affects Egg Size

It is possible in forcing feeding when the hen lays day after day for a week or two that the egg will gradually lose in size, depending on the hen and the kind of food eaten.

Always in Same Place

"I can't think where I've seen your face before."
"It's been in the same place ever since I've had it."

BIG MONTHS IN EGG PRODUCTION

Fall and winter months may be termed the profit months in poultry culture for the reason that the big difference in production between heavy laying flocks and flocks which are not profitable comes during that season of the year. Almost any healthy hen will lay well toward spring.

It is an established fact that a flock must average approximately 100 eggs per hen per year in order to return the owner a profit. The difference between the monthly flock averages of good flocks and poor flocks comes mainly during the fall and winter months. In other words, the owners of profitable flocks have utilized methods which increase production at a time of year when fresh eggs are scarce and therefore higher in price.

Early hatches of early maturing birds could be set down as one of the most important points in getting heavier fall and winter production. Pullets that start laying during the latter part of October are from hatches that came before May 1, usually before April 1. They are birds that have been well fed and are fully developed. Good birds of this character will produce greatly over 100 eggs per year if they are properly fed and housed.

Proper feeding and housing are the second factors that must receive attention in order to get a good yield of fall and winter eggs. Hens will lay in the spring on a straight grain ration. At that time they are answering nature's demands and will lay if conditions are at all suitable. However, after the normal laying season is over, it is correspondingly hard to secure heavy production. This can only be done by using a ration that supplies plenty of animal protein, minerals, and succulent feed in addition to grain, which is needed as the basis of all rations.

Parasites and diseases are the third source of trouble. Nothing will upset a good laying flock quicker than a lot of troublesome mites that make the birds want to leave their regular houses and roost in the trees.

Preparing for Winter Around Poultry House

A thorough cleaning of the poultry house should take place at this time of year in preparation for winter. The clean-up should consist of removing nests, roosts, hoppers, drinking stands and all other equipment from the house. Each should get a thorough scrubbing with water and some good disinfectant. The house itself should be swept, ceilings, walls and floor. The floor should be well scraped clean of all hard, dried litter and droppings.

The final clean-up step should be a thorough spraying of the inside of the house with some good disinfectant. Whitewash helps to brighten a dark house and a freshly whitewashed house has a tendency to encourage its owner to keep it looking clean for some time to come.

The Missouri College of Agriculture has recently completed some experiments in which they find that in feeding hens, soy-bean meal may be used in place of meat scrap, thereby reducing the cost of feed. They also found it paid to feed mineral.

EAST SIDE SINGERS MEET HELD LAST SUNDAY

The East Side Singing convention met at the Post Baptist church last Sunday afternoon. The attendance was small because of the threatening condition of the weather, but a good singing was enjoyed by all who attended. New officers were elected for the new year. H. G. Hammer, president and H. H. McDonald, vice president. I. V.

Marrs, president for the past year, resigned in favor of Mr. Hammer. The next meeting of the convention will be at Howard the first Sunday in May in an all day session.

The first Sunday in April would be the regular date but it was decided to not have the convention on that date because of the District Convention which meets with New Hope Church in Jones County 4 miles south of Stamford in a three days session beginning Friday night and holding forth until Sunday afternoon. There is a great number of Haskell County Singers who wished to attend this convention is why the date of the convention of the East Side was changed to one month later to meet at Howard in an all day session with dinner on the ground.

Honored With Birthday Party

Miss Mary Sue Hester gave a birthday party in honor of Misses Lucille Akins and Mollie Hester last Wednesday afternoon at the beautiful home of her parents. Lucille's 12th birthday was the 22nd of February, and Mollie's 3rd birthday was the 29th, although she was 12 years old. Many beautiful gifts were presented to each of them.

Ferns and crepe paper were used in carrying out a color scheme of pink and white and green in the reception and dining rooms. The dainty colors were also featured in the refreshment plate served to the guests.

Many outdoor and indoor games were played during the afternoon. Miss Mary Frances Sutherland won a prize in the "Tree" game contest.

A dainty refreshment plate was served to the following: Misses Mary Frances Collier, Lois Fouts, Lylye Newsum, Lella Mae Chapman, Mary Frances Sutherland, Ollie Hester, Dixie Orr, Ruby Lee Polk, Maurine Norton and the honorees.

Thanks!

The members of the T. E. L. Class of the Baptist Sunday School wish to thank all who contributed so generously toward making our market day the past Saturday, a success. In fact, the venture proved such a success, we have decided to have a market on each first Saturday every month and we trust our friends will take notice. This is a splendid class of workers, numbering about fifty active members, with a good list of others who come irregularly. Thirty-two members were in the class the past Sunday morning.

What to do with convicted criminals and jailbirds is one American problem, and one solution is brought forward by a courageous scientist, Dr. A. P. S., professor of chemistry in the University of Buffalo. "Let us," he says hopefully, "take our healthy convicts as subjects for dicing experiments." They would not only become of some use, remarks the "Tapeka Capital", but would get a relief from jail food.

EVANGELIST G. A. DUNN, JR.

REVIVAL MEETING AT CHURCH OF CHRIST

A big revival meeting will begin at the Church of Christ on Sunday March 18th. Evangelist G. A. Dunn, Jr., will do the preaching during this meeting. Brother Dunn is one of the most noted ministers of the Gospel in the South. He is a young man whom you will be delighted to hear, a man with a wonderful delivery of speech and a pleasing personality. He is bringing a message to the people of Haskell about the old, old story of the Cross. Marion Davis, a real singer, will conduct the song services during the meeting. Brother Davis comes from Franklin, Tenn., a place where people take a natural delight in singing. Some of our greatest singers were born and reared in Tennessee. I will make a better man or woman of you to come and take part in the uplifting, soul-reviving songs that will be sung and bear the Truth spoken in love. Wherever these men go, people who cannot possibly get seats stand up night after night to hear them. The Church of Christ invites everybody to come, you will be welcome.

Poultry Facts

A young guinea is like a young grouse or quail and will hide when scared. They do not make any noise at all when they hide from a supposed enemy and are very hard to find.

Some poultrymen place a large box of coal or wood ashes in each section of their laying houses. The hens dust in the ashes and undoubtedly remove many body lice by the process.

Feeding whole, dry oats as a large part of or all whole grain ration is poor business. Even though the oats are plump and bright, the hulls make them poor feed except in limited quantities.

The period when pullets start laying is a critical one. Pullets which are due to begin to lay at freezing weather usually wait until spring. This means an entire loss for several months.

While the hen isn't exactly a grazing animal, she does tuck a lot of grass under her belt during a summer day. And when she can't get it, she must have sprouted oats, cabbage, mangels, or such. If she's going to gladden you with eggs.

If we expect winter eggs we must produce our pullets from hens that are bred to lay during the winter.

Avoid All Drafts

There should be no drafts in the poultry house in fall and winter. The sides of the house should be as nearly air-tight as it is possible to make them. This applies also to the roof. This is one reason why ahngle roofs are not satisfactory. The air sifts through and considerable heat is allowed to escape. Drafts are responsible for the birds contracting colds. Cracks should be completely closed so that comfort will be afforded to the laying flock.
