Hoarding Food

The habit of burying food is one that several wild animals possess. It is evidently a trait handed down from the time when England was in a grip of continual ice. At that time the hunter ate all he could, then buried the rest, returning to it when hungry. Nowadays the weasel will kill far more than it can eat, and it still buries the surplus, but, unlike its ancestors, it does not return to the store, as there is plenty of fresh food to be obtained.

THE STORY OF THE "SATURDAY NIGHT KID"

Clara Bow and Jean Arthur, sisters, are sunny girls in Gladys' department store. James Hall, a clerk there, is Clara's best "boy friend."

At an inspiration meeting at the store, Gladys (Hyman Meyer) announces that Hall is to be promoted to floorwalker.

Clara and Jimmy have planned for their marriage, but his promotion has given him a coveted idea of himself and when Jean makes a "play" for his attentions he begins to forget Clara.

That night as she and Clara are dressing for the pageant, Sellen arrives to say that he was too late at the track to place the money on her horse and had placed it on another one—a loser.

Then Clara runs in with the money and both she and Jean are cleared. She turns in righteous wrath upon her hypocritical sister and then turns for comfort to the welcoming arms of the now-awakened Jimmie.

Bath Every Six Months Sufficient for Monks

Rules for bathing in the Benedictine monastery of the Fourteenth century have been ascertained at Leinster, Ireland, in the ruins of St. Augustine's, Clonsilla and St. Peter's, Waterhouse. Monks were allowed to take baths twice a year—before Christmas and before Easter. Previous to the Fourteenth century, four baths were allowed annually, but this number was cut in half because bathing was considered a luxury except when necessary for the sick. Only four monks could bathe in one day, so it took more than two weeks to accommodate the 60 monks in the monastery. No baths were allowed on Sunday. The monks had servants to wash them. At Westminster these servants received extra food and beer on bath days. The baths were taken sitting in a tub, instead of standing, as was probably the regular custom at the time. Monks were not allowed to stay in the baths to "soak" after they had been washed. At first, bathing was conducted in complete silence, but "the good custom has been entirely abandoned in these modern times" of the Fourteenth century.

Idea of Broadcasting Fire Alarm Not Modern

Methods of transmitting news of fire are very old and until about the middle of the Nineteenth century watch towers with alarm bells were maintained in American cities. After the development of the electric telegraph, reliable apparatus was installed. As early as 1845 Dr. W. F. Channing of Boston published an article in the Advertiser outlining a fire-alarm telegraph system. In 1850 Charles Robinson used Morse alphabet for signaling fire alarms from police stations and engine houses in New York city to watchmen at tower bells, who sounded the signal of the appropriate district. A telegraph signal plan was put into operation in Boston April 29, 1862. New York installed a fire-alarm telegraph system in 1869 and by 1877 it had reached 75 cities. Although various systems are in use, that devised by Channing and Farmer and improved by Claxton has been the one most generally employed in America. The keyless door was patented by Towler in 1875 and the automatic keyless door by N. H. Soren in 1895.

It was a continuous duel between Ellen Terry and Herbert Tree as to who should get the better of the other. They would think out elaborate jokes. But one day the joke went too far. Ellen Terry took a hatpin and stuck it into Tree's enormous belly at the beginning of a long scene. Falstaff slowly began to deflate, and when the scene ended he came off with his clothes hanging in festoons around him. Ellen Terry was nowhere to be seen. She had locked herself in her dressing room.

How Ford Methods Cut Cost of Distribution

Lower profits in selling save you at least \$50 to \$75 in addition to the many savings in manufacturing

TWENTY-SEVEN years ago the Ford Motor Company was formed to provide reliable, economical transportation for all the people. That original purpose has never changed. The constant effort in every activity is to find ways to give you greater and greater value without extra cost—frequently at lowered cost. This applies to distribution and similar important factors, as well as manufacture.

For the Ford Motor Company believes that its full duty is not only to make a good automobile at the lowest possible price, but to see that there is no waste, extravagance, or undue profit in any transaction from the time the car leaves the factory until it is delivered to your home. It is obvious that hard-won savings in production will be of little value if they are sacrificed later through excessive selling costs.

EVERY purchaser of a motor car has the right to know how much of the money he pays is for the car itself and how much is taken up by dealer charges. If these charges are too high, one of two things must happen. Either the price of the car must be raised or the quality lowered. There is no other way. The money must come from somewhere.

In the case of the Ford, the low charges for distribution, selling, financing and accessories mean a direct saving of at least \$50 to \$75 to every purchaser in addition to the still greater savings made possible by economies in manufacturing. Ford charges are not marked up or increased to cover a high trade-in allowance on a used car.

The profit margin on the Ford car has always

been fair to both the dealer and the public. Within the past three months, it has been possible to effect still further economies. Today, the discount or commission of the Ford dealer is the lowest of any automobile dealer. The difference, ranging from 25% to nearly 50%, comes right off the price you pay for the car.

THE business of the Ford dealer is good because he makes a small profit on a large number of sales instead of a large profit on fewer sales. He knows, too, that the extra dollar-for-dollar value of the car makes it easier to sell and more certain to give satisfactory service after purchase.

Consider also that the Ford car is delivered to the purchaser equipped with a Triplex shatter-proof glass windshield, an extra steel-spoke wheel, and bright, enduring Rustless Steel for many exterior metal parts, in addition to four Houdaille double-acting hydraulic shock absorbers and fully enclosed four-wheel brakes.

If for any reason you wish to buy certain small accessories, you will find that these, too, are sold at the usual Ford low prices. Replacement parts are also available at low prices through Ford dealers in every section of the country.

THESE are important points to remember in considering the purchase of a motor car. They show why it is possible to put so much extra quality into the new

Ford and still maintain the low price. They are also the reasons why more than 35% of all cars sold today are Model A Fords.

### Picked Cotton Versus Snap Cotton

Below is given actual figures on gathering a bale of cotton in Haskell County.

Cost Per Bale of Picked Cotton	Cost Per Bale of Snap Cotton
\$1.25 per 100 to pick 1350 lbs. \$16.88	Average \$1.12 1/2 per 100 to pull 1900 lbs. \$21.38
25c per 100 to gin 1350 lbs. 3.37	30c per 100 to gin 1900 lbs. 7.60
Baggin and Ties 2.00	Baggin and Ties 2.00
500 lb. bale average total cost \$22.25	500 lb. bale average total cost \$30.98
Gins figure the seed from Snap Cotton 40% or 760 lbs. seed out of 1900 lbs. bolls and Picked Cotton 42 1/2% out of 1350 lbs. picked cotton or 574 lbs., a difference of 186 lbs. at \$35.00 per ton, same being \$5.28 more of seed taking the gins own figures out of snap cotton, so deduct this \$3.28 from \$30.98	
Loss	\$ 3.28
Total expense of snap	\$27.70
Total expense of picked	\$22.25
Loss	\$ 5.45

Can You Afford to Pull Cotton at a Loss of One Cent and Half Per Pound, besides the bollie machinery ruins your staple beats it up and makes it of less value in selling, but even if you received the same price it is \$5.45 less profitable to pull cotton except in late season when cotton cannot be picked.

Growers lost this season by this method, taking 24,378 bales of the entire county and multiply by \$5.45, you get \$132,860.10 if it was all pulled instead of picked.

Plant a better staple cotton, then pick your crop, and see that it is properly ginned. If a half and half bale is ginned ahead of you, have the roll run out and not mixed with your better cotton.

Leave the bolls on your land to fertilize the soil. Don't rob your land of this vegetable matter.
