

SPED KINGS OF THE SOUTHWEST WILL VIE AT HASKELL JULY 3-4

Seven Events Will Be Run Daily Under Auspices of Fair Association

West Texas will pay tribute to gasoline, Sunday afternoon, July 3 and Monday, July 4, on Haskell's 5-8 mile speed track at Fair Park, the fastest track in Texas.

The races are sponsored as a competition and any driver can pass the safety test can be his car.

ANY INCREASE OF \$5 PER MONTH FOR W.P.A. WORKERS?

Half Million Laborers in Thirteen States Will Be Benefitted

The Works Progress Administration ordered pay increase averaging about \$5 a month for all W.P.A. workers in 13 States mainly in the South.

The WPA estimated that 500,000 of the lowest wage brackets could benefit.

130 Carloads of Grain Marketed From 1938 Crop

With an estimated 90 per cent of Haskell county's grain crop harvested, 130 cars had been shipped from this city over the Wichita Valley railway at noon Monday, station officials reported.

Tray Mule Killed When Struck By Car On Highway Sunday

An automobile driven by Rev. A. English, pastor of the Barton Methodist Church, was damaged considerably but occupants of the car were unhurt when the machine collided with a mule which had strayed onto Highway a few miles north of Haskell Monday night.

RAIN PREVENTS ADDRESS OF SEN. NELSON SATURDAY

Lubbock Candidate for Lieut. Governor Makes Canvas Business Section

Although rain kept him from making a public address, Senator G. H. Nelson of Lubbock County placed his candidacy for Lieutenant Governor before voters here Saturday.

In giving his views on the vital questions of state government, Senator Nelson assailed the legislative deeds of his opponent, Coke Stevenson of Junction.

"I want Stevenson to square up his claim that he is for the schools with his bill in which Stevenson attempted to lower the royalty on sulphur discovered on school lands from one-eighth to one-hundredth," Nelson said.

Citing his outstanding attendance record in the Senate, Nelson speared that of Stevenson in the House.

"Exclusive of his terms as Speaker, Stevenson has missed 47 per cent of the roll calls," Nelson thumbed the House Journal.

Nelson labeled himself as "a friend to the independent merchant" and cited his record as evidence.

"When I went to the Senate, I cast the deciding vote which placed the tax on the chain stores," Nelson said.

Questioned concerning payment of the old age pension, Nelson said he had always voted to finance the social security program which includes aid to the needy, aged, teachers' retirement, and assistance to the blind and neglected and dependent children.

He reaffirmed his opposition to the open saloon and sale of liquor by the drink and legalized gambling. Nelson was author of the Senate bill which wiped racetrack gambling from the state.

Nelson has been touring the state for four months. Last week he returned to his adopted West Texas where the people have honored him with the offices of county attorney, district attorney and State Senator without opposition for a second term.

Methodist Picnic Party Postponed Until July 13th

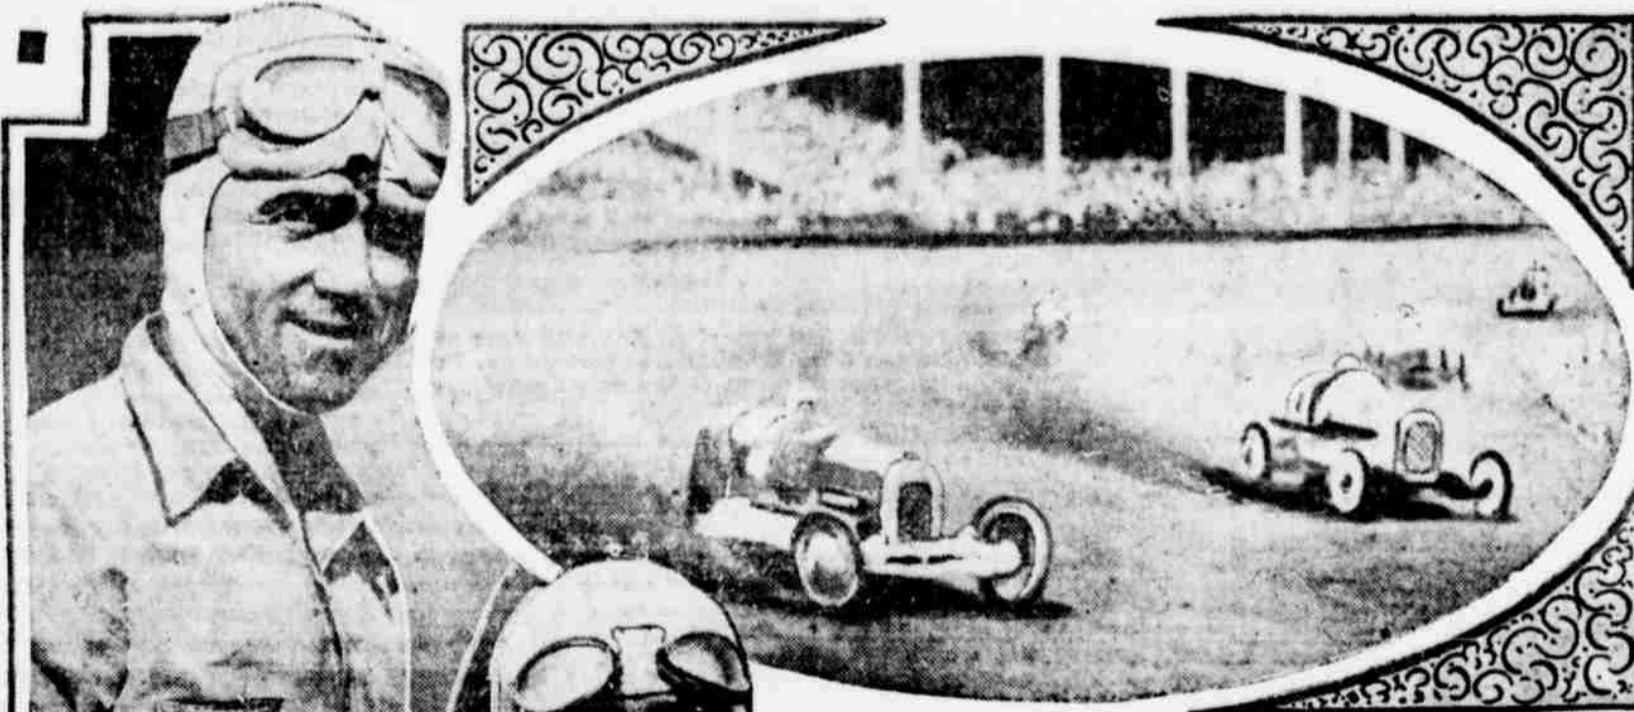

The lawn picnic party and ice cream supper which was announced for the Haskell Methodist church lawn for Wednesday evening of this week has been postponed for two weeks on account of the unfavorable weather.

Mother of Former Haskell Resident Dies In Oklahoma

Haskell friends will regret to learn of the death last Friday in Pauls Valley, Okla., of Mrs. Willis Southern, mother of Leo Southern, former Haskell resident.

Yield from this year's crop was disappointingly low, due to damage from a severe late freeze, but the quality of grain has been uniformly high, buyers report.

Speed Demons of Southwest Will Perform During Two Days Meet

Above at left are shown Posey Reeves, Oklahoma City, and Carl Mayfield, Kansas City, Mo., race stars, each a leading pilot from his respective section. With the entries of many drivers hailing from different sections of the country, the Haskell summer automobile races Sunday July 3 and Monday July 4th promise to be of "big league" magnitude.

JNO. LEE SMITH TO SPEAK IN ABILENE ON WEDNESDAY

Local Supporters Planning To Have Delegation In Attendance

John Lee Smith of Throckmorton, candidate for Lieutenant Governor, will outline his candidacy to West Texas friends and supporters at a rally and speaking to be held in Abilene Wednesday night on the lawn of the Federal building in that city.

Methodist Picnic Party Postponed Until July 13th

"The Store That Holds Prices Down And Quality Up"

1939 World's Fair of West from Air

New aerial photograph showing a corner of Treasure Island in San Francisco Bay and some of the palaces and towers nearing completion for the 1939 Golden Gate International Exposition. In foreground are the ferry slips; in background, a view of the East Bay end of the San Francisco-Oakland Bay Bridge. The tallest building seen here is the 400-foot Tower of the Sun.

Encouragement for those who make a poor showing in their first campaign for public office is seen in the case of Commissioner J. R. White, of Walker county, Alabama. The first time he was a candidate he received only 143 votes in the entire county; next time he polled 1,070, and in his last race he was triumphantly elected with a vote of 3,421. But sometimes the political wheel spins the other way.

The study of botany seems to have been neglected by the senior class of the Moravian college for some at Bethlehem, Pa. Some carelessly entwined the flowers of the traditional "daisy chain" with poison ivy, and those who have come into contact with the irritating Toxicodendron will sympathize with the fair graduates.

A prodigious memory for figures is that of Adam Haberman, a railroad man of Lincoln, Neb., who mentally noted the numbers of each car in a freight train composed of 39 cars, and is said to have been able to write them down correctly in their proper order from front to rear of the train. Most of us have difficulty in remembering our car license number.

AAA Program Has Benefitted Both Corn Belt and Southern Farmers

Some farmers in the North Central Region States (comprising the Corn Belt) have expressed concern that the cotton South may increase the competition for Northern corn and dairy farmers by shifting heavily from cotton to corn and dairy production, but such is not the case, according to Claude R. Wickard, director North Central Division, AAA.

Terms of the Farm Act have resulted in benefitting both the cotton and the corn belt, Mr. Wickard explains as follows:

"What southern farmers actually did in this regard since 1933 should furnish a good indication of what they may do in 1938. The statements in this letter are based on Bureau of Agricultural Economics figures and on census figures for the 12 Southern States, South Carolina, Georgia, Florida, Tennessee, Alabama, Mississippi, Arkansas, Louisiana, Texas and Oklahoma.

A study of the records calls attention to these important facts:

"1. The number of bushels of corn produced in these 12 States has been less than the 1928-'32 average in three out of the five years of the AAA program, with a net decrease for the entire five-year period.

"2. Although the number of bushels of corn production has been smaller, there has been some increase over the previous five years in corn acreage. The 1928-'32 annual average of corn acreage in these States was 28,307,900 acres. The 1933-'37 average was 30,247,000 acres. The smallest corn acreage in these States since the War was 26,334,000 acres in 1923; the largest, 35,209,000 acres in 1921. Last year, corn acreage in these States was 28,703,000 acres. The March 'Intentions to Plant' report of the Bureau of Agricultural Economics indicates that corn acreage in 1938 in these States will be 29,340,000 acres.

"3. The 1923-'32 average annual yield of corn in these States was 15.3 bushels per acre, compared with an average yield of 25.7 bushels per acre for all farms in the United States, and an average yield of 28.3 bushels per acre in Iowa.

"4. Corn acreage in these States is about 2 1/2 times the corn acreage in Iowa, yet Iowa produces as many bushels of corn as all 12 of the States.

"5. Grain sorghum acreage and production have increased in Texas and Oklahoma, but this increase has not quite offset the decrease in corn acreage made since 1933 by farmers in these States.

"6. When there are surpluses of livestock and livestock feeds, they are produced outside of the South, yet the South is doing its share in preventing such surpluses. The 320 pounds of cottonseed produced from the average cotton has a feed value equal to 5.7 bushels of corn. When the Southern farmer reduces his cotton crop one acre, he reduces production of livestock feed supplies the equivalent of 5.7 bushels of corn. With an average corn yield in the South of 15.3 bushels per acre, the average cotton grower would have to plant more than an acre of corn for each three acres taken out of cotton in order to continue producing the same livestock feed equivalent.

"7. Not only does cottonseed in the form of cake or meal contribute to livestock feed supplies, but cottonseed oil, extracted from the seed, competes directly with butter and lard in the form of substitutes for these products. By reducing this competition, the Southern cotton program has been a factor in the improved prices for butter and lard.

"8. The average number of dairy cows in the 12 States listed is just slightly over two per farm, compared with an average of nearly four for all farms in the United States, an average

BILLIONS OF PRIMING DOLLARS READY TO MAKE INDUSTRY CHUG

WASHINGTON — The New Deal is jingling billions of dollars in its pockets, preparing for one of the biggest Saturday nights of spending in history.

What effect the huge outpouring will have on the slump is anybody's guess. But of the forthcoming spending, and of the tremendous sums involved, nobody can doubt.

Congress has gone home, but the billions remain. What is unique in the new program is the concentrated nature of the attack. The New Deal has gone through one spending era already and has a precedent. Believe it or not, officials insist one of the hardest things on earth is to spend a billion dollars. Projects have to be approved long in advance, and some of the huge sums are not really spending—they are lending; and the terms have to be gone over carefully and the risks calculated. In the present instance, much of this spade work has been accomplished.

And so the money is jangling today in the officials' pockets and it's going to be one of the biggest national "week ends" on record.

Here are the five big spenders and what they have to spend: Harry L. Hopkins, WPA Administrator—\$1,425,000,000 to aid the unemployed in the next eight months.

Howard A. Gray, Acting PWA Administrator—with \$862,000,000 for public works projects.

Henry A. Wallace, Secretary of Agriculture, who has some \$862,000,000 for farmers.

000 for urban housing projects and slum clearance.

Brig. Gen. John J. Kingman, Acting Chief of Engineers, whose department has \$225,000,000 for rivers, harbors, and flood control work.

These are the New Deal's spending quintuplets. Each of them is ready to start sluicing out dollars at once, but it would be distorting the situation to imply that these totals would be spent immediately. For example, the relief money will be husbanded to go through the winter, when distress may be acute. The farm allotments will not reach their climax for months.

For the moment, the biggest job of spending will be PWA's allocation of works projects. It is expected that between \$500,000,000 and \$600,000,000 of such projects, already submitted by localities, will receive approval here this week.

In the nature of things the effect of such expenditures is tremendous. There is both the immediate effect and the second, third, and fourth effect. Building a bridge sets men to work at the site of the bridge, and it sets men to work preparing the steel for the bridge. The labor stretches out like the cast of characters in the "House-That-Jack-Built". In this case it is the Government's "Jack." The money is implemented and assisted by promises of states, cities, towns, and co-operate groups to put up so much additional for each batch of rolling dollars that the Government sets free. Furthermore, when the workers get the money they spend it again for potatoes,

rent, and Susie's piano less. Whether the released flood dollars can turn the trick transforming the trade slump to a prosperity wave is another question.

Mr. Hopkins, biggest spender of all, said here that besides initial \$1,500,000,000 for relief enterprises, cities, counties, states would put up a \$400,000 in so-called "sponsor's fund." Of the combined total he figured \$1,325,000,000 would go direct to workers in the form of wages. Costs of materials would take over \$300,000,000, and machinery, rent, and transportation might take \$200,000,000. He figured out how his money would be spent and how the money would be re-spent by the men who got it.

Mr. Gray, the Acting PWA spender, has a more immediate job of getting the money out and his week-end comment was an assurance that this will be done. PWA operates on a long-term basis. The agency all keyed up to carry out the order of President Roosevelt to a program under way at the earliest possible moment. Congress pointed out, limited the number of applications to the number of 103 days and required that construction start in six months. This was because "the nation wants action." WPA is all set to make allocations, Mr. Gray added, but the final responsibility rests on the individual localities. Treasury can put up the money he indicated, but the communities will have to come and take it away.

The other spenders all said the same thing.

After convicting a man Pontiac, Mich., of stealing apples the jurors ate several pies introduced as evidence.

TUESDAYS 52 Years of Uninterrupted Service—Oldest Business Institution In Haskell County FRIDAYS

Watch The Pennies

By T. C. RICHARDSON, Sect. Breeder-Feeder Association

Says the adage, "is a penny earned." Thinking of that thrifty principle in terms of the farm, making the crop is not completed until it is saved. It is saved only when it has been either safety stored for future use, or consumed by livestock and transformed into a saleable product. Tons of meat and milk, eggs and wool are produced on some farms merely by "saving" grass, weeds and crop residues which go to waste on neighboring farms for lack of the animals or fowls to utilize them when available.

At this season of the year the Southwest is often threatened with drought, corn begins to "burn up" and its failure is indicated. Since introduction of the trench silo quite possible to avoid a total by cutting the corn and storing it in the trench before it dries. That is not merely a penny saved and earned, but dollars on dollars, for the ensilage will keep indefinitely and can be turned into cash through livestock when you are ready. If rainy weather interferes with curing hay it not be lost. Put it in a trench which can be dug in a few days or at most a few days. You can't lose it then; it cannot burn up, blow away or deteriorate from weather.

There is nothing mysterious or complicated about ensiling a crop. A few simple rules must be observed. Green crops with a reasonable sugar content need nothing but close packing to exclude the air, either cut or ensiled in the whole stalk. Other crops, such as alfalfa and other non-saccha-

rine forage crops, require some cheap molasses to start fermentation. The size and shape of the trench, how to fill it and treat each crop and how to insure its keeping can be learned from your county agent or your neighbor who has had silo experience.

A few cross fence, either temporary or permanent, are indispensable to the full utilization of what grows on the farm. Grass either in field or pasture, and crop residues have no market value on the ground, and usually will not pay for the harvesting unless the livestock do the work. It is poor business to lose this potential cash return, whether for lack of livestock to use it or for lack of fencing so they can use it.

An Arkansas authority says an acre of good grass has made up to 400 pounds of beef, and the steer did the work. Few acres will make so much, but every day's good grazing represents a pound of beef, or butterfat; to "save" it means the animal must be on the ground when the grazing is ready. Like some factories, the value of by-products saved on the farm often means the only profit in the manufacture of the main product.

A Pennsylvania Dutchman lives well and gets rich by saving what we in the Southwest too often waste—the straw, grass and manure. None of them can be sold in the market place as such, but what a difference they make when saved and used on the farm where they are! The difference between success and failure, profit and loss.

A penny saved is still a penny earned, no matter what form it takes.

SKULL OF PREHISTORIC 'BEAR DOG' UNEARTHED NEAR CANYON RECENTLY

CANYON—One of the most ferocious of carnivorous animals which inhabited this section more than a million years ago was the "bear dog," an animal as large as the Alaskan brown bear.

The Great Dane and St. Bernard are large, but they are puny creatures compared with the Amphicyon Gidleyi, or bear dog. One of the finest specimens of these dogs was found by a WPA party recently in Donley county, where Wayne Christian is supervising excavations. It consists of a complete skull with the lower jaws

and all the teeth excepting a few. According to Prof. C. Stewart of the West Texas State College, it is the best specimen of the kind in existence.

This valuable skull will be placed in an exhibit case in the museum of the Panhandle-Plains Historical Society, where the collections obtained through the WPA paleontological excavations sponsored by the College during the last four years are housed.

By W. T. CARLEY

O. Henry Home Is State Shrine

The modest four-room cottage that housed William Sidney Porter (O. Henry) when the young man was then unknown to fame and employed in the general land office, has been converted into a museum by admirers of the world's greatest short story writer, and is already a state shrine.

The city of Austin keeps a capable curator in charge and this interesting museum now draws visitors from all parts of the world.

The payrolls of the land office during the '90s, when Porter was employed as a mechanical draftsman, is kept in easy access for the many interested visitors to this department by the present land commissioner, William H. McDonald.

Four Students of University Scale Heights

In the spring of '97 four young Texans finished working their way through the state university, received their law degrees and went their separate ways. Less than 30 years later these

four bosom friends were serving simultaneously as senior senator from Texas, junior senator from Texas, governor of Texas, and attorney-general of Texas.

The four in the order named, were: Morris Sheppard, Tom Connally, Pat M. Neff and Walter A. Keeling.

Princely Land Grants Handed The Railroads

Some commentators now bemoan the fact that three million acres of land were given in exchange for our state capitol, and due to the fact that these lands are now valued roughly at a hundred million dollars, we thus have the costliest capitol building in the world.

But records show that thirteen times as much land was given to Texas railroads to hasten railway construction. That prior to 1892 exactly 38,826,880 acres of the public domain had been so awarded.

Thus, a billion-dollar land bounty was handed to our railroads by the people of Texas, on a proverbial silver platter.

Texas Tech Archaeology Trip To Mexico Starts July 19

Conditions in Mexico make the field trip in archaeology from Texas Technological College entirely safe, according to advices received by Dr. W. C. Holden who will conduct the trip. Assurances have come from the Laredo chamber of commerce, the U. S. consul at Monterey, and Ambassador Josephus Daniels.

The group will leave July 19 and return August 23. Most of the time will be spent in Mexico City but visits will be made to Cuernavaca, Toluca, Teotihuacan, and Xochimilco. The course carries six hours college credit and there is still room for additional students, Dr. Holden says.

One-half of the people speaking the English language live in the United States.

Mrs. Ida Dunlap has returned from Temple where she attended the funeral of her father. While gone she visited relatives in San Antonio, Belton and Salado.

Farm Refrigerators: Cool Device Almost A Necessity; Homemade, Mechanical Types

(BY TERRY LANDSEER, in The Semi-Weekly Farm News) Cold retards the growth of bacteria and is a great aid in keeping food from spoiling. Milk especially should be kept cool, or it will begin to sour within a few hours and may not be safe for invalids or babies whose stomachs are easily upset.

have trouble keeping vegetables that are cooked in the morning from beginning to spoil before supper time, if we do not have some sort of refrigerator. Freshly cooked food may taste a little better, but cooking supper in the summer is one of the most disagreeable things a tired housewife can do. She suffers from the kitchen heat and so do all the members of the family.

in some special freezing device. For example, we have been using ice cream freezers with ice and salt many years and usually get the cream frozen. Mechanical Refrigerators The mechanical refrigerators when once installed, cost very little for operation. The main cost is the price of the refrigerator itself, and most of us consider that to be plenty high when we first hear the price named. But when we remember that these boxes last for many years, this cost does not seem prohibitive and we think of it as an investment. Many automatic mechanical refrigerators have been in use more than ten years and they seem to be as good as ever.

thing in the cost of a mechanical refrigerator and it is only fair to prorate this over a period of years. Buy your refrigerator on a divided payment plan and count the operating cost only as part of your daily living expenses. The pleasure and saving on food by good refrigeration will well repay the investment. How often will you ask for ice cream if you don't have to turn the freezer? Is ice water on a hot day any temptation? You can have plenty if you have a good refrigerator and have it at little daily cost, from two to ten cents per day, according to the machine you purchase.

Tuesday Only, June 28 GUEST NITE "The Gaiety Girls" With Patricia Ellis ... Jack Hulbert

Wed.-Thurs., June 29-30 Romance That makes you glad you're alive! A Girl Who'll show you why you're alive! A Picture You'll remember as long as you're alive!

ALICE FAYE In "YOU'RE A SWEETHEART" With George Murphy - Ken Murray - Charles Winninger - Andy Devine Plus: BABY SHOW Pictures of our local young blazing on the screen.

There are at least a dozen first-class refrigerators of various sizes on the market. If it is impossible to purchase a refrigerator, a home-made cooling device can easily be rigged up which may be depended upon to keep foods cooled from twenty to fifty degrees below summer weather. Heat is required for the evaporation of water and so as water evaporates something near it must give up part of its heat. One can make use of this fact to cool food by causing the heat to be drawn from the food as water evaporates. An inexpensive device provided by making a frame of wood or metal which has shelves for holding the dishes and which is covered on all sides by an absorbent cloth to lead the water down from a vessel on top is about all there is to such a refrigerator.

How Evaporation Helps Water led down the cloth has a large area exposed to the air and evaporates rapidly. As the air on the inside of this refrigerating device gives up its heat to the evaporating water, the heat from the food on the shelves is also reduced. It is claimed that some of these refrigerators are so efficient that, under favorable circumstances, the temperature within can be reduced to 45 degrees Fahrenheit by the evaporation of the water alone, even in summer weather. The one I used years ago kept milk and cooked vegetables fresh for twenty-four hours.

There are all grades of refrigerators with all degrees of efficiency from the above described homemade device to the best insulated mechanical refrigerator which makes its own ice and can be set to freeze everything inside the box. Refrigerators using commercial ice for cooling are on the market in great numbers. Their usefulness and efficiency depends almost entirely on their construction, insulation, and the amount of ice kept in the ice chamber. The best ones are capable of keeping food temperatures down to near freezing if the box is kept closed practically all of the time. So far as I know, ice refrigerators are made with automatic freezing devices. If you want to freeze anything with ice, you have to crush the ice, add salt and use it

The freezing device in mechanical refrigerators works on the principle that gases expand as they absorb heat, and contract upon being cooled. A gas is confined and caused to circulate in such a manner as to draw heat from the food. This goes on until stopped by a thermostat which operates to indicate when the box is cold enough. Circulation of the gas is started again when the thermostat sets it in motion. Automatic refrigerators which operate from a small gas flame are very convenient for use in farm homes which are served by pipe lines or which use compressed gas delivered in drums.

Kerosene Refrigerators There are several companies making first-class automatic refrigerators which burn kerosene or gasoline and may be set up anywhere in the country and not depend on either gas or electric service. These refrigerators work and work efficiently. They employ the same freezing principle as the gas-operated and the electric. The only essential difference is that they are fitted with special burners because of the fuel used. The odor of the fuel cannot reach the food chamber and the fuel tank will hold enough fuel to operate the machine for a number of days. Such refrigerators cost so little for operation that it is hardly worth counting and they require very little attention. The price of the box is the big

factor in the cost of a mechanical refrigerator and it is only fair to prorate this over a period of years. Buy your refrigerator on a divided payment plan and count the operating cost only as part of your daily living expenses. The pleasure and saving on food by good refrigeration will well repay the investment. How often will you ask for ice cream if you don't have to turn the freezer? Is ice water on a hot day any temptation? You can have plenty if you have a good refrigerator and have it at little daily cost, from two to ten cents per day, according to the machine you purchase.

Wants

- CLOSE OUT—Bargain on new Radios: \$49.50 values \$29.50; \$59.95 Radios for \$39.95. Reeves-Burton Motor Co.
FOR SALE—Texas Special Pedigreed Cotton Seed at a special price. Duncan Gin Co.
FOR SALE—We have four good used radios at real bargain prices. Reeves-Burton.
FOR SALE—Good cash business, owner going away. Part term. Helpy-Self Laundry, 711 E. Walker, Breckenridge, Texas.
FOR SALE—24 laying hens and 100 Buff Minorca Chicks three weeks old. D. L. Cobb, north of Roberts church.
FOR SALE—We have some extra good bargains in used tires. Reeves-Burton.
FOR SALE—One new 110 volt power plant complete, good for farm home, or lighting school and church building. Will sell at big saving to purchaser. Reeves-Burton.
FOR SALE—First year Georgia Hibred Cotton Seed, \$1.00 per bushel. Have second year Georgia Hibred seed for 70c per bushel. These seed were ginned in 20-bale lots and are as pure as possibly could be maintained. G. F. Mullino, Haskell.
FOR SALE—New Crosley Electric Refrigerator. Big Discount. Bert Welsh.
HARPER PLANTING SEED — Good staple, good turnout. Pure clean from first year pedigree seed. Last season actual turnout 1810 lbs. bolls, 555 lbs. lint. \$1.00 per bushel or trade 1 bu. for 2 bu. common seed. V. C. Derr, 3 miles southeast of Welton.
WANTED—Mens and Boys Used Shirts. Spot Lemmon.
WE WANT your Generator and Battery business. We have recently installed an Ignition Plant and can give you the best of service. New Generators exchanged for old ones. J. F. Kennedy Service Station.
FOR SALE—or TRADE—section fine Castro County land, suitable for wheat and stock farm. Will trade for Knox, Haskell, Jones or Taylor county land. W. A. Nelson, 2142 S. 7th Street, Abilene, Texas.
CANT SLEEP!—It's not always your conscience that keeps you awake nights. Maybe you need that old hard mattress remade as good as new. Try it once. One Day Service. We call for and deliver. Bogg & Johnson. Phone 44.
JUST WRECKED — Several late cars. Used parts cheap for cash. Davis Garage, next door to Smitty's Auto Supply.
FOR RENT—Two room furnished apartment. Newly decorated. See Mrs. J. S. Boone.
WILL TRADE—Large 2-wheel trailer for a smaller one. W. A. Lyles.
FOR SALE—Nice gentle paint saddle pony. Cox Henshaw, at Bert Welsh Station.
FOR SALE—Good Jersey yearlings. See T. A. Pinkerton, Haskell, Texas.
FOR SALE—Gas range, pretty fair condition. See R. W. Bischofhauser, Tonkawa Hotel Shop.
FOR SERVICE—Good young boar. Sows picked up and delivered. See Gene Dunlap, Haskell, Texas.
WEST TEXAS HALF AND HALF Cottonseed for sale. Culled and Sacked in 3 bushel bags, 90c per bushel. F. O. B. seed house. The variety for late planting. S. N. Reed, O'Brien, Texas.
FOR SALE—Berries for sale at J. W. B. Johnson's, 7 1-2 miles southeast of Anson at 20c per gallon and purchaser pick them. Will pick every day except Sunday beginning May 18.
SORE TROAT — TONSILITIS! Mop your throat with Anesthesia-Mop. A wonderful new sore throat remedy and if not completely cured, in 24 hours your mouth 40 degrees cheerfully returns to normal.
Stores.

With 32 Candidates

There was no single candidate who wasn't made to feel thoroughly among friends at Sagerton Friday night during the second political rally and speaking. Sagerton people are like that. They are neighborly and friendly to every visitor.

And despite the fact that farmers in the Sagerton country were at the peak of their "busy" season in winding up the grain harvest and other farm work, the large audience greeting the speakers indicated that the folks in that section are still interested in county government affairs. At least 500 persons attended the rally, with some estimates of the crowd placed at 750 persons.

Among the early arrivals for the Sagerton engagement were some of the "newcomers" in politics—obviously shy on their first visit to the southwest section of the county, but they soon were made to feel at home.

Several candidates apparently dreading the speaking ordeal frequently glanced toward gathering clouds that gave promise of rain or showers—probably hopeful that Jupiter Pluvius would curtail the speaking engagement. However, the full schedule was observed, with every county and district candidate speaking. Some nervously, however. But in the opinion of a listener, each speaker acquitted himself (or herself) in a creditable manner.

used by researchers to describe the process. Molecules apparently get tired of being pushed and squeezed over one another, and eventually the atomic structure breaks up. To find out just how much punishment metals can stand before becoming unfit for service, is the object of such research.

Bend a piece of metal long enough and far enough and it breaks. Nearly everyone has experienced this in bending a nail or a piece of wire until it snapped. Perhaps the heat involved at the breaking point was noticeable too? This was caused by the friction of the molecules sliding over one another like a deck of cards being shuffled.

Among the early arrivals for the Sagerton engagement were some of the "newcomers" in politics—obviously shy on their first visit to the southwest section of the county, but they soon were made to feel at home.

and finally a scream as the flywheel spins 12,000 revolutions per minute, carrying the pieces as fast as a highpowered rifle bullet. One man opens a water valve and a shriek smothered the water spurts from the nozzles inside the housing and metal.

As the crescendo reaches its peak, the engineer opens a valve in the housing and removes the pieces. Three minutes before they were shiny and smooth. Now each piece has a jagged notch cut nearly a quarter the way through the steel, cut by ordinary drinking water falling under no greater pressure than that in the kitchen faucet.

Always the engineer is searching for metals that will do more than is expected of them. They find that treating steel with heat adds to its tensile or stretching strength, but it does not always add proportionately to its ability to withstand fatigue.

\$25.00 REWARD

Will be paid by the manufacturer for any Corn, GREAT CHRISTOPHER CORN Remedy cannot remove. Also removes Warts and Callouses. 35c at Oates Drug Store.

Announcement

I want to announce to my friends: On July 1, 1937 I bought the shop formerly owned by Mr. A. W. Carlisle. I will appreciate your welding, blacksmithing and auto repair. Owner and Operator ... Lee Roy Hulsey

AFTER THE TROUBLE

After the fire has destroyed your property; after the accident has injured you; after your death—what about your insurance? Is it paid promptly, or is there a long session of haggling and wrangling with the adjustors? Good policies, carefully prepared, eliminate the annoyance of adjustment. See that your policies are right, and that they afford you the protection you should have.
