CROOKED HOLE DRILLERS CUT OFF — Texas Railroad Commission has severed pipeline connections and set zero allowables for all wells on leases in the East Texas Field on which deviation or inclination surveys have shown a crooked hole oil well.

Chairman William J. Murra of the Commission says that the order covers 62 leases.

Attorney General Will Wilson advises that when a deviated well is found on a lease, the whole lease is to be questioned until proven otherwise.

Before the wells involved can be restored to production. operators must have inclination surveys made on each one, and must have production tests to determine each well's actual ability to produce. Wilson said production tests were required because of the possibility that a single deviated well might be drawing the allowables for eight or ten wells on a lease that are actually dead.

Officials also revealed that the deviation survey is being ex-tended to a single well in the Webster Field in Harris County.
