Why should we be concerned about disease in animals? What relationship does animal disease hold to humans? Often people wonder what veterinary medicine has to do with public health. The answer is, it has much to do with it.

The fact is that animals, birds. chickens, and man plus the go-be-tween vectors such as mosquitoes, ticks, flies and lice are capable of sharing hundreds of diseases common to one another. Recently World Health Organization officials listed 110 animal diseases transmssible to
