SAFETY RULES GIVEN ON FLYING KITES

Texas Electric Co. today appealed to parents to caution their children about flying kites near electric wires.

"The windy season brings kite flying time and this traditional sport is one that is lots of fun for children if it is done safely," Collin R. Reese, Texas Electric Service Co. manager, pointed out. "Many youngsters do not realize the dangers in this innocent pastime if certain safety rules are not observed, the most important of which is to never fly kites where there is the possibility of them getting tangled in electric power lines."

Never again!

No more "clothesline accidents" when you have an **Electric Clothes Dryer**

LIVE BETTER ELECTRICALLY — dry clothes for an average of about 5¢ a load in an Electric Clothes Dryer.

Clothes hung outdoors to dry may be soiled by playful pets, broken clotheslines, airborne dirt and other hazards... but your wash always dries clean in an Electric Clothes Dryer. Your clothes are safe from sun-fading and wind-whipping, too, when dried indoors with clean, gentle electric heat. They come out sunshine-sweet and so fluffy-smooth that many pieces need no ironing. And, of course, you're spared the back-breaking work of lifting, stooping and stretching to hang up heavy clothes.

SAFETY RULES GIVEN ON FLYING KITES

Texas Electric Co. today appealed to parents to caution their children about flying kites near electric wires.

"The windy season brings kite flying time and this traditional sport is one that is lots of fun for children if it is done safely," Collin R. Reese, Texas Electric Service Co. manager, pointed out. "Many youngsters do not realize the dangers in this innocent pastime if certain safety rules are not observed, the most important of which is to never fly kites where there is the possibility of them getting tangled in electric power lines."

Other dangerous practices in connection with kite flying include metal, flying kites in the rain when even a cotton kite string can become dangerous conductor of electricity and trying to retrieve a kite in case it does get caught in electric wires, Mr. Reese stated.

"Local youngsters who fly kites have been careful and cooperative in the past and we have had no serious mishaps in several years, each year, over the nation, there are many cases of injuries to kite flyers," Mr. Reese said. "If kites are made right and flown right, kite flying is an enjoyable, wholesome sport."

Washington — Rep. George Mahon reports that the recently announced drop in support loans for feed grains has been a shock to the members of Congress from grain producing areas.

The House Committee on Agriculture is making a study of the situation in preparation for a Committee hearing which will be held on March 13th. The support loan level announced for milo for the 1959 crop is 31 cents per hundred below the level for last year. The national average support for milo last year was \$1.83 per hundred. The announced national average support for this year is \$1.52 per hundred.

On Feb. 18th the Secretary of Agriculture announced support loan levels for corn, milo, and other feed grains. In view of the language of the law, it was anticipated that the support price for milo in 1959 would be approximately the same as corn, inasmuch as both have approximately the same feed value. This is not the case and an explanation is being demanded and ways are being sought to remedy the situation.

Mahon said, "Since the drastic drop in support levels for milo was announced, I have appealed to the Secretary of Agriculture and others in the Department to reconsider the action taken. I have received complaints in regard to the situation from Frank Moore of Plainview, President of the Grain Sorghum Producers Association, and many others. If the drastic cut in supports remains in effect, grain sorghum producers will sustain losses totaling many millions of dollars. A more effective program for all feed grains is needed but action is made most difficult by reason of the well known attitude of the Secretary of Agriculture."

 deep into the woods for mammoth loads

This big Series 60 Chevy bulls its way as far as 8 miles into the Louisiana woods, fights over ruts and jagged stumps... then grinds back out with towering loads of logs! The Sabine Lumber Company attests to the truck's ability to take it: "Chevrolet makes the best truck for our type of operation."

Out where a truck is known for the beating it can take, Chevy's making friends fast. Truckers like the

way these toughies hold up: the way they wade right in, take their lumps, yet stay in shape.

Today, it's *grit* that Chevy's showing the trucking industry. Real toughness that pays off in job-after-job dependability... in ability to get work done at least expense. You can match Chevy muscle against any tough light-, medium- or heavy-duty job and know you've got it beat!

Your Chevrolet dealer's ready right now to meet your special work requirements. Stop by and see him soon.

No job's too tough for a Chevrolet truck!
