Your thrifty way to cook ... only pennies per meal

ELECTRICITY

You cook for pennies when you cook electrically. Most electric surface

cooking, at low settings, uses heat

thriftily. The electric oven, insulated on all four sides and top and bottom, keeps heat inside where it belongs. And, once the oven reaches the temperature you select, it uses electricity less than half of the cooking time. It costs an average of only about 3c a meal to cook with clean electricity. See your electric range dealer soon. Thrifty electric cooking is another of the many ways in which your dependable, low-cost electric service helps you live better . . . electrically.
