How would you CHART YOUR COURSE

Pictured here are the records of four "life lines" of our ness-four things which largely control the destiny of any bu whether it be a farm, a factory or a store. They are Wages, I rials Costs, Prices, and Profits. Suppose these were pic what is going on in your own affairs. How would you chart future course from these facts?

What about wages?

Wages have risen steadily for five years. Before the strike which began on January 21 in ten of our plants and which has choked off nearly all farm machinery produc tion, earnings of employes of these plants averaged \$1.151/2 an hour, not including any overtime. The Union demanded a 34 cents per hour increase and a Government board has now recommended a general increase of 18 cents an our, which would make average average would be \$53.40.

What about materials?

No one seems to know how high materials costs will go. The Gov-ernment has increased steel prices as much as \$12.00 a ton, with an average increase for all grades of Steel is the most important other materials are also increasing

What about prices?

in our prices since they were frozen by the Government in early 1942. Since then a few small increases have been allowed where particu lar machines were substantially

What about profits?

Risk is part of the American profit course, ask either our customers the Government to guarantee that we can be certain of profits each year. The chart tells the story of our profits during the war. Although Harvester produced more goods than ever before, i had no desire to get rich out of war, so our rate of profit has steadily gone down. What our 1946 profit will be is extremely uncertain.

and declining profits, we are asked to pay higher materials costs and make the biggest wage increase in the history of the Company. Can we do this? Wages and materials consume

all but a few cents of every dollar we take in. If our prices continue frozen, and cost of wages and

MOTHER'S LITTLE HELPER

Yes, little sister swings an inspired broom! She's Mother's Little Helper-and what a help she is! Mother has a Big Helper, too-a really efficient helper-always at her finger-tips-ready to cook and wash and clean-ready to make life easier

for all the family. This tireless helper, of course, is electric service. It does a lot of jobs at low wages. It never asks

for time off. Maybe Mother and the rest of you take this faithful servant for granted. When you flick a switch you expect the power to be there-instantly-always. And the fact that it is didn't just happen. It comes from the friendly efficiency of the folks in this company.
