MEXICO GIVES LAND GRANT TO JAPANESE

POSSIBILITY OF INTERNATIONAL CONTROVERSY DENIED BY MEXICAN SECRETARY.

GRANTED TO CORPORATIONS

Concessions Declared Authorized by Mexican Constitution as to Area and Location.

Mexico City.—That Japanese corporations have been granted concessions to exploit agricultural lands in Lower California was the statement made by General Amado Aguirre, undersecretary of development and agriculture. The affirmation was made, however, that the concessions were fully authorized by the provisions of the Mexican constitution regarding the area and position of the territory in relation to the ocean shore and the frontier line.

There was nothing in the concessions, it was asserted by the undersecretary, that might possibly lead to difficulty as far as the Monroe doctrine was concerned. Reports that there is possibility of international controversy over the granting of the concessions to the Japanese were said to be absurd by General Amado Aguirre in an interview in which he said the action was legal. At that time he would not admit the concessions had been granted. The Japanese legation here denied it had any official knowledge of the action.

HOUSTON GETS FEDERAL RESERVE BANK BRANCH

BRANCH AUTHORIZED ON CONDITION ALL BANKS IN DISTRICT CO-OPERATE.

Washington.—The federal reserve board has granted the application of the bankers of Houston for authority to establish in that city a branch of the federal reserve bank.

The present bank at Dallas has already indicated its approval of the application. A committee of Houston bankers presented the application to the reserve board and urged favorable action upon the application.

The board authorized the establishment of the branch on the condition that the state banks in the Houston district not already members of the reserve system co-operate with the branch bank and come into the federal reserve system. The Houston committee left for home confident that a sufficient number of the state banks would co-operate to make the organization of the branch a certainty.

Resulting Sickness Invades Louisiana.

Hilton Orleans, La.—With announcement of three cases of sleeping sickness or lethargic encephalitis in New Orleans and eleven in the state, Dr. George Dowling, president of the state board, declared that at the meeting of the state board an ordinance would be promulgated requiring physicians to report cases. Cases outside of New Orleans are Shreveport one, Richland Parish two, Arnaudville one, Livingston one, Keatonville one, Colfax one and Thibodaux one.

Fifteen Men Hurt in Explosion.

Washington.—Fifteen men, including a number of enlisted men of the army, were injured by an explosion at the ordnance proving grounds at Aberdeen, Md. Reports to the war department said the original explosion was started by a fire of undetermined origin in a shed in which 240 millimeter bombs were being loaded and the concussion was transmitted to other sheds, with resulting losses estimated at \$50,000.

Will Discuss Danzig With Germans.

Amsterdam.—In response to Germany's note on the subject of Danzig, Marshall Foch has offered to give personally at Spa to a German plenipotentiary fully empowered to decide within twenty-four hours full particulars and required guarantees concerning the landing of General Haller's troops. The German government, according to Berlin advices, has decided to send Mathias Erzberger as plenipotentiary to meet Marshall Foch.

\$5,000 Secured in Hold-Up.

Marian, Ark.—Prisco train No. 801, en route from St. Louis to Memphis, was held up between this city and Bridge Junction recently by three masked men, who escaped with about \$5,000 in cash.

American Railroad Troops to Russia.

Archangel.—The first detachment of American railroad troops, assigned for work on the Murman railway, have arrived on the Murman coast. Other detachments are expected to follow soon.

New Loan on Easy Payments.

Washington.—Terms of payment in the new Victory Liberty loan just announced are the most liberal ever offered by the government. Deferred payments may be extended over a period of six months, from May 10 to Nov. 11. Secretary Glass announced that 19 per cent of subscriptions would be due with application May 10, 19 per cent on July 15, and four subsequent installments of 29 per cent each on Aug. 12, Sept. 9, Oct. 7 and Nov. 11, 1919.

Breaks Arm

Earl Agan, who has been here for a few months with his uncle M. E. Wakefield, in cranking a cranky Ford, last week (there is no other kind) he got his right arm broken. He is carrying it around in a sling, and will continue to do so for some weeks.

RECENT OIL OPERATIONS IN CALLAHAN COUNTY

The following is a brief resume of recent oil operations in Callahan County, as reported from Baird:

A show of oil was struck today in the Dawkins-Cordwint No. 1 at 610 feet. Rig timbers and drilling machinery arrived here today for the Reidel Company of Denver, which expects to begin drilling at once on their block at Rowden. Simon & Co. of Tulsa are hauling out a rig for their well on the Dyer ranch, eight miles north of here. Crowley and associates of Beaumont have location one mile east of Clyde for a deep test.

Urdan & Reese Edwards No. 1, three miles southwest of Clyde, is a location. The Galena/Signal Company has made a location on its block near Oplin and expects to begin operations as soon as machinery arrives.

Roxana-Hart No. 1 is drilling at 345 feet. Their Hart No. 2 is a location. Alamo Petroleum-Hart No. 1 is drilling at 2,210 feet.

Hendersen-Childs No. 1 is drilling in the black lime with a show of oil.

Pierce Oil Corporation has already received one rig here and has two more en route. This company has several large tracts in this country.

E. H. R. Green is building a rig seven miles southeast of Baird.

Bitzinger-Albin No. 1 is drilling at 1,740 feet.

Sapulpa Petroleum Company, Seale No. 1 has rig up.

McBride Odom No. 1 waiting on drillers.

Dawkins and associates have machinery on track at Cross Plains for their well at West Caddo Peak. Three more rigs have arrived at Putnam where the Kemp & Kell Cathey No. 1 still holds center of interest and where very high prices are being paid for leases.

Empire Shafer Diggers No. 1 will spud in Friday, seven miles north of Clyde.

DOG KILLED NEAR RISING STAR, HAD HYDROPHOBIA

A dog that was creating considerable disturbance in the Ckra-Elm communities was killed last week, after having bitten hundreds of dogs and a large number of stock, and its head was sent to Austin for examination. Monday of this week Oliver Jones who sent the dog's head to Austin, received a telegram stating the dog had hydrophobia in the worst way. We have been informed that most of the dogs in the community have been killed. Others living in the community who own dogs should contain them for a few days or have them killed. In case any live stock in the community should become rabid, they should be killed and burned. Hydrophobia is a very deadly disease and no cure has ever been found for it. We hope there will be no further disturbance of this kind.

MAN ASLEEP SINCE EIGHTEEN DAYS AGO

A report from Waxahatchie states that B. W. McIntosh, who lives near Italy, has been sick eighteen days with a malady believed by attending physicians to be sleeping sickness. Eighteen days ago Mr. McIntosh fell into a sound sleep, and since that time has slept continuously. A few days ago he was aroused for a moment, but soon passed again into a state of coma. He has taken very little nourishment except a little soup, which has been administered while he was asleep. He is said to be in a very weakened condition and unless there is a very early change it is said there is little hope for his recovery.

Votes Road Tax.

Precinct No. 1 in Coleman County, which embraces the town of Coleman and the northeastern part of the county, has voted a special 15c road tax, the votes standing 197 pro and 124 against.

VICTORY LOAN TOTAL TO BE \$4,600,000,000

Terms of the Victory Liberty loan have been announced by Secretary Glass. They are: Amount \$4,500,000,000, oversubscriptions to be rejected. Interest 4 3-4 per cent for partially tax exempt notes convertible into 3 3-4 per cent notes wholly tax exempt.

Maturity four years with the Treasury reserving the privilege of redeeming the notes in three years.

The 3 3-4 per cent notes to be issued later also may be converted subsequently back into 4 3-4 per cent notes.

The 4 3-4 per cent securities are to be exempt from State and local taxation excepting estate and inheritance taxes and from normal rates of Federal income taxes.

The 3 3-4 per cent securities are exempt from all Federal, State and local taxes except estate and inheritance taxes.

This will be the last Liberty loan Secretary Glass explained, although there will be other issues of Government securities to finance belated war expenses. These will not be floated by popular campaigns.

None of the past issues of Liberty bonds are convertible into victory loan notes, and there are no specific provisions in the terms of the victory issue serving directly to maintain market prices of past issue.

In many communities the selling campaign already has begun actively without formal acceptance although the official opening date is April 21. The drive will continue three weeks, until May 10.

75,000 AMERICANS BURIED IN FRANCE

Nearly 75,000 American fighting men now lie buried in France, according to the latest casualty advice to the War Department.

Advices up to April 2 summarize the American casualties, including navy and army, as follows: Killed in action.....33,705 Died of wounds.....14,154 Died of disease.....22,698 Died of other causes..... 4,035

Total dead.....74,533 Taken prisoners..... 4,777 Missing in action..... 4,951 Wounded.....198,037 Grand total.....282,348

**CENTRALIZED COMMUNITY BUILDINGS ARE PROMOTERS OF NEIGHBORHOOD ACTIVITIES**

A Typical Community Building at Bolton, Conn., Shortly After Completion.

(Prepared by the United States Department of Agriculture.)  
The community club provides the "get-together rendezvous" for the rural neighborhood. A country club of this character is not only a clearing house of sociability and rural uplift, but, during the recent war, it supplied excellent quarters for emergency work of the Red Cross, local branches of the council of national defense and other war activities, as well as fostering home economics and farm demonstration operations.

County communities in 100 different localities now enjoy the community club. Rest rooms are provided for the farmers and their families when they visit town, while usually the county agent and the local nurse have offices in the building. The equipment of the building varies with the agricultural prosperity of the territory; from plain furniture and fittings of distinctly utilitarian simplicity to elaborate furnishings, including moving-picture machines, pianos and talking machines.

**How Clubs Are Formed.**

Not long ago the rural organization project of the bureau of markets, United States department of agriculture, conducted a comprehensive investigation of the community buildings, their activities, organization, and management. Usually the persons owning stock in their community building association organize an incorporated company. Nonstock holders desiring the privileges of the building are associated as social members, both classes paying dues. Generally, the control and management of the buildings are under the direction of the board of trustees and various committees, which centralize their powers in the authority delegated to the house secretary. In some instances where the community building is secured through private or industrial donation, control is placed in a select board named by the donor and possessing

power to appoint his successors. Township and state buildings are managed by the usual public officials.

**Maintenance Expenses.**

As a rule, the annual maintenance expenses range from 5 to 10 per cent of the initial cost, being in the simpler buildings chiefly for light and heat and in the larger ones inclusive of salaries of secretaries, physical directors, caretakers and librarians. Funds to maintain the organizations are secured through membership dues, rentals, receipts from entertainments, moving pictures, bowling, billiards, and similar sources of revenue. According to the report of the government specialists, 32 of the community buildings now in use are owned, controlled, financed, supported, and used by their respective communities. Money is secured by issuing stock, as well as by general contribution, this income being supplemented often by receipts from sales, games and entertainments, or by securing loans with the building as security, the loan being repaid later when sufficient funds accumulate for such purpose.

**Aims of Clubs.**

Twenty-nine of the clubs studied are the product of local organizations with restricted aims, such as a women's club, athletic club, or a farmers' club, which constructs a building for its private use as well as for the general social use of the community. Twenty of the community buildings now in use have been donated by private individuals, who generally operate and maintain them, while 13 of the club-houses have been provided by the township or town which maintains the buildings through revenues earned by the buildings themselves. There are seven of these community buildings which have been erected as social centers for the use of the employees of some local industry, as well as for the community in general.

**PLAN OUTLINED FOR PLANTING ORCHARDS**

Soil Where Trees Are to Be Planted Should Be Prepared.

Important to Take Precautions to Prevent Roots of Trees From Becoming Dry—Where Planting Is Delayed "Heel In."

(Prepared by the United States Department of Agriculture.)

If the prospective orchardist prepares the soil where his trees are to stand as thoroughly as he does his garden before planting vegetables, the growth of his trees will amply repay him. If the orchard site is in soil, it is advisable to cultivate it during one season, at least, after the soil is plowed under, in order that the fruit trees are planted in a yard where the owner desires to retain his lawn, the soil over an area of several feet where the tree is to stand should be spaded thoroughly. This plan, however, is a compromise between a lawn and a fruit garden, and the results are not likely to be so satisfactory as where the ground is thoroughly cultivated.

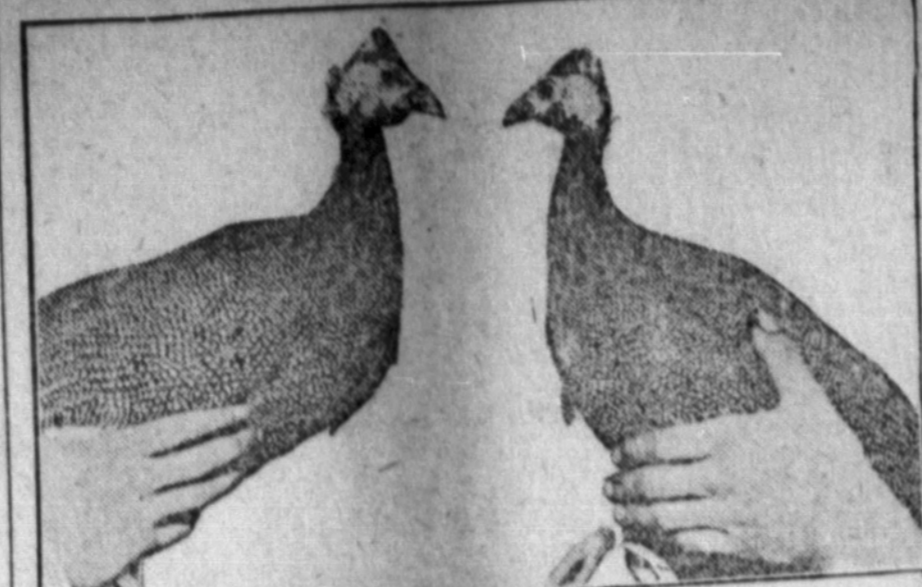

Every possible precaution should be taken from the time the trees and other plants are taken from the nursery until they are planted to prevent the roots from becoming dry. If the plants are to be set at once on being received, the roots may be covered with wet gunny sacks, an old blanket, or some other material that has been thoroughly moistened, until they are ready to be put into the ground.

If it is necessary to delay planting for a considerable time, the trees should be "heeled in." This is done by uniting the bundle of plants, loosening and separating the roots and packing the soil about the roots to prevent drying.

The trees should stand an inch or two deeper when planted than they stood in the nursery, and the holes should be broad enough to receive the roots without bending them from their natural positions. This applies also to raspberry, blackberry, currant, and other small-fruit plants with the exception of strawberries. The last named should be planted at such a depth that the crown of the plant is even with the surface. If they are planted deeper, than this they are likely to smother, while if planted more shallow the roots are likely to dry out.

The broken ends of roots should be cut off and any long, slender roots should be shortened to correspond to the main root system. Small-fruit plants should be treated in about the same way.

**GUINEAS NOT PROFITABLE AS MARKET EGG PRODUCERS, BUT QUITE USEFUL FOR MEAT**

Male Guinea Fowl on Left Can Be Distinguished From Female by Larger Helmet and Wattles and Coarse Head.

(Prepared by the United States Department of Agriculture.)

Guineas are equipped with diproducting organs which rival the braying of the pig, and the turn of the head is characteristic. However, farmers have capitalized this talent of the guinea. Because these birds raise a hue and cry whenever marauders visit the poultry yard, many farmers place a few guineas with each farm flock to act as policemen. They sound the alarm of approaching danger. Furthermore, the guinea is favored with pugnaeous dispositions, which enable them to combat hawks and other common enemies of the flock and thus to keep the yards free of such objectionable pests. Often a few guineas are raised with a flock of turkeys and allowed to roost in the same tree, where they can give warning if any theft is attempted during the night.

**Guinea Gaining Popularity.**

The popularity of guinea fowls as a substitute for game birds such as grouse, partridge, quail and pheasant is increasing among those who are fond of this class of meat, and the demand for these fowls is steadily on the gain. Many hotels and restaurants in the larger cities are eager to secure prime young guineas, and often they are served at banquets and club dinners as a special delicacy. When well cooked guineas are attractive in appearance—although darker than common fowls—and the flesh of young birds is tender and of especially fine flavor, resembling that of wild game.

There are three varieties of domesticated guinea—Pearl, White, and Lavender, of which the first is most popular. Good size and uniform-color are considered as most important characteristics in the conformation and appearance of guineas. The male and female look alike, although experienced persons will notice that usually the males have larger helmets and wattles and coarser heads. The cry of the female resembles "buckwheat, buckwheat," while the call of the male is a one-syllable shriek.

**Eggs Good for Home Use.**

Guineas lay fewer and smaller eggs than ordinary hens, and on this account and also because their egg shells are so thick and dark that it is almost impossible to handle them, dealers do not like to handle them, although for home use guinea eggs may profitably replace hen eggs. Guinea hens usually begin laying in April and May, those in the South starting earlier than those in the North. From 20 to 30 and often more eggs are laid before the guinea hen becomes broody, at which time she can be broken of her broodiness easily by removing the eggs from her nest, when she will soon begin laying again. If not allowed to sit, guinea hens will continue to lay throughout the summer, yielding from 40 to 60 and in some cases 100 eggs during the season.

Chicken hens are used commonly to incubate guinea eggs, but guinea hens, turkey hens, and incubators may also be used successfully. The usual sitting for a guinea hen is about 14 eggs; for a general-purpose hen, such as a Plymouth Rock, 18 eggs, and for a turkey hen about 24 eggs. The incubation period for guinea hens is generally about 28 days.

Chicken hens make the best mothers for guinea chicks. Each hen that is to have a brood should be allowed to hatch out some of the eggs herself, after which she will mother all that are given her. After the hatch is completed the hen and chicks can be removed to a coop. Conditions about the farmyard are very unfavorable for the raising of guineas, and on this account the coop should be placed in a distant part of the farm and the hens and chicks kept there until the latter are

old enough to go to roost. Like chickens, guineas require adequate protection from rain and exposure.

**Require Less Feed.**

Guineas are fed in much the same way as chickens, except that they require smaller amounts, as they are natural rangers and will rustle sufficient weed seeds, grasses, buds, insects, and green vegetation to supply much of their living. The first meal should consist of a small quantity of hard-boiled egg mixed with bread crumbs, or the bread may be soaked in milk, squeezed partially dry and fed in small bits. Clabbered milk also is good. Three times a day is often enough to provide food. Sprouted onion tops, dandelion leaves, lettuce, or onion tops, cut fine, should be provided if plenty of good range is not accessible. As the birds grow older, whole wheat, oats, and cracked corn may be fed.

**The guinea's desire to roost develops at the age of six to eight weeks, although if raised with a hen these birds can be induced to follow her into the hen house and roost there. It is advisable to accustom the birds to the hen house, otherwise it will be almost impossible to catch them at market time. As a rule, wholesale prices for guineas in New York range from 75 cents to \$1 a pair for dressed springers weighing one pound apiece, and from \$1.25 to \$1.50 a pair for those weighing three to four pounds to the pair. Old guineas are not in demand and seldom sell for more than 50 cents to 90 cents a pair. One poultryman located near a New England summer resort raised as many as 400 guineas in one season, selling them in August, weighing one pound apiece, at \$1.25 a pair.**

**Demand for Guineas.**

A healthy demand for guineas as breeding stock pays from \$2 to \$2.50 a pair and \$3 to \$5 a trio for quality birds. The call for eggs for hatching purposes is greater than that for breeders, settings of 15 eggs from purebred birds bringing from 75 cents to \$1. There is some demand for day-old guinea chicks, one hatchery near Boston having handled as many as 2,000 chicks during a single season. The marketing season for guineas is during the late summer and throughout the fall. The fowls usually are sold unplucked, as they look more attractive with the feathers on and sell more readily. However, for hotel and restaurant trade, guineas should be dressed in the same manner as other fowl.

**POULTRY NOTES**

Granulated charcoal is very good for small chicks. It helps prevent diarrhea.

The Cayuga ducks, a black variety, are very desirable to keep for home eating.

When a hen is not laying, her comb shrivels and shows white scales on its surface.

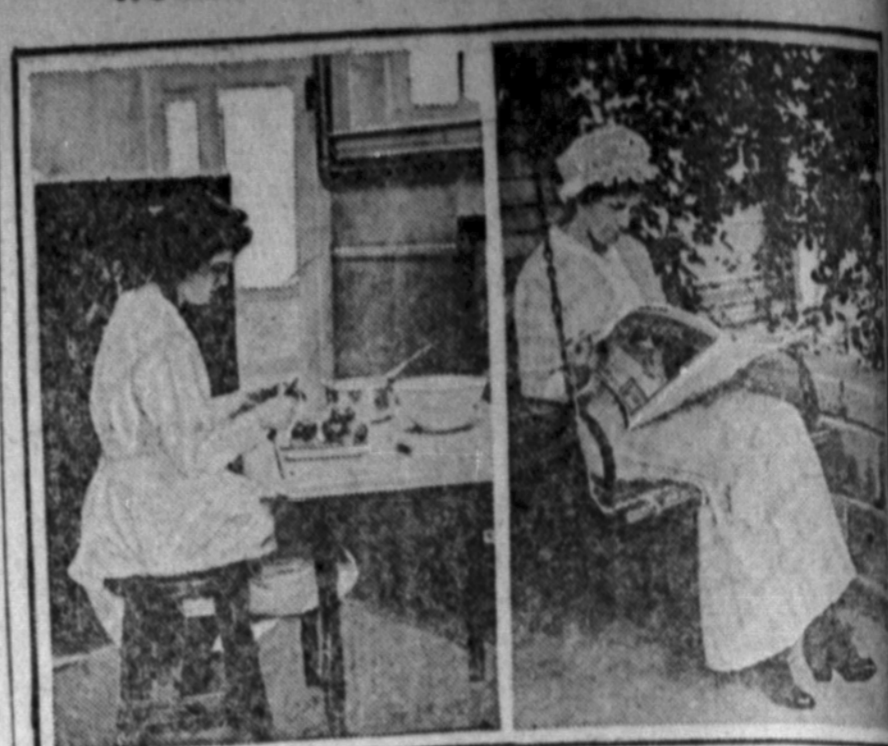

Hatch as many chicks this season as you can feed and properly take care of, and no more.

Chickens will not give adequate returns in eggs or growth when kept under insanitary conditions.

The only way to make progress in the poultry business is to breed from the best specimens only.

Grid helps the fowls to digest their feed, and a box or hopper of it should always be within their reach.

**SCHEDULES OF TIME MAKE LEISURE FOR WOMEN WHO FOLLOW THEM CONSISTENTLY**

Wise Women Have Time for Reading as Well as Cooking.

(Prepared by the United States Department of Agriculture.)

One thing drilled day after day into the boys who are coming back from camps or overseas is "schedule," a word for everything and each thing done at that time. Housewives need that drill.

The argument will come up, "But woman's work is never done. It cannot be put in the same class with a soldier's life at all."

Woman's work is full of many tasks, it is true, but that is just why she should work by a schedule. Do you remember the day when you were a little girl that your mother told you you might go to Mary's to play if you finished washing the dishes by 1:30 and washed them well? You finished at 1:20, while the day before it had taken you much longer, and yet you had washed no more dishes. It was simply because you had an aim in your work, and you concentrated on what you were doing? A judicious sprinkling of leisure-hour treats, if you do your work quickly and well, might have the same result now.

**Wasted Time Saved.**

But more than that, making a plan of work or a schedule causes the "head to save the heels." It always pays and it makes a woman "watch her step" much more closely. It will her step" much more closely, it will avoid waste time and such calamities as having the cleaning of the dining room coincide with the meal hour. By its aid housekeeping is put on a businesslike basis.

"But what a hopeless task it is to foresee all the tasks in a day," a disheartening voice says.

If you cannot remember all the work you do, watch yourself. See what duties there are that present themselves necessarily and what come from poor planning and mismanagement.

Are you one of those women who get cleaning spasms on days when the larder is low, and "just feel like bawling" on the days when you don't need

any baked products? On still another day do you puzzle as to why you are so tired and then remember that the day before you had felt so energetic that you both washed and ironed, for the fun of it? If you are guilty, then "schedule" is what you need.

**Making Weekly Schedules.**

Woman's work is scheduled more easily by the week because of the number of weekly tasks. These must be taken into account as well as the daily ones. Some which do not come so often as once a week must be taken care of, too, in the budget of time. Each woman has different things that must attend to, so any schedule of budget of time will have to be worked over or used only as a pattern to be altered when necessary. Every day the housekeeper has these tasks:

1. Preparation of three meals.
2. Dish washing.
3. Care of beds.
4. Light cleaning of used parts of the house.

At least once a week she has these tasks:

1. Laundry.
2. Marketing.
3. Special cooking.
4. Sewing or repairing.
5. Thorough cleaning of house.
6. Cleaning of windows, silver, etc.

**The Daily Schedule.**

The list made, the next question is how to arrange the day's work. It will depend on the housekeeper herself, but she should have a definite preference and stay by it in order that her work may become efficient.

Such a schedule will make the daily observer appreciate the multitude of tasks that come up in the daily life of a housekeeper. It will increase her own self-respect to see the list of things she is doing each day, but more than that it will increase her respect in housekeeping. To work by schedule will make her commander of her duties rather than their slave.

**HERE'S A SAMPLE MONDAY MORNING PROGRAM.**

Rise, dress, put all beds to air.	6.00-6.15
Prepare breakfast.	6.30-7.15
Breakfast.	7.15-7.30
Wash dishes, plan meals for Monday and Tuesday.	7.30-8.15
Make beds.	8.15-8.30
Prepare laundry for Tuesday.	8.30-11.00
Clean living room, dining room, kitchen and bath.	11.00-12.00
Prepare lunch.	12.00-12.15

**CLOTHING BUDGET IS OF BIG IMPORTANCE**

Purchase and Upkeep of Clothes Is Made Much Easier.

Well-Planned and Intelligently Followed, Should Enable Men and Women to Be Better Dressed for a Given Amount.

(Prepared by the United States Department of Agriculture.)

Economy in purchase and upkeep of clothing is easier when expenditures are planned in advance. The woman who so plans and classifies her expenditures will set aside a sum for clothing based on the clothing she has on hand and the use she can make of it, on her own needs, and on her income. The clothing budget should be her guide when she buys. Even if she does not do just what she has planned she will be more likely to avoid mistakes than she would if she acted without giving the purchase careful consideration with respect to her expenditures in general. Budgets well planned and intelligently followed should enable men and women—for the budget system is equally valuable for both—to be better dressed for a given sum than when purchases are made haphazard, and frequently savings are possible, in the opinion of department of agriculture home economics experts.

A budget—

Shows the relative amount which should be spent for clothing as compared with other needs and the relation of the probable purchases to what one has on hand.

Should prevent unwise spending, for instance, at "reduction sales," since it

considers one's needs as distinguished from the temptation of purchasing "bargain" prices something one does not need.

Promotes saving, since a systematic study of what we have and what we must buy necessarily implies that after due consideration rather than upon impulse.

Helps one to consider quality in relation to price, since this is one of the fundamentals of good buying. Economy does not mean getting the most in the way of temporary pleasure for as little money as possible, regardless of the character or quality of the goods.

**OF INTEREST TO THE HOUSEWIFE**

Salt fish can be used in many ways.

Cauliflower makes an excellent soup.

Orange jelly is excellent for layer cake.

Dried fruits and cereal can be cooked together.

Before oiling a floor, be sure it is absolutely clean.

Bedsprings should be painted with aluminum paint to save from rust.

Good gored aprons can be made from old skirts, especially if they are of cotton.

Save all pieces of clean paper that come to the surface of the small children can use them for their play.

**MARKET EGG**  
**USEFUL FOR MEAT**

Washed From Female by Large Coarse Head.

enough to go to roost. Like chickens require adequate protection from rain and exposure.

**Require Less Feed.**  
Guinea hens are fed in much the same manner as chickens, except that they require smaller amounts, as they are not rangers and will rustle sufficient weed seeds, grasses, buds, insects, green vegetation to supply much of their living. The first meal should consist of a small quantity of hard-boiled egg mixed with bread crumbs, the bread may be soaked in milk, scalded partially dry and fed in small quantities.

Clabbered milk also is good. Feed them a day is often enough to give food. Sprouted oats, dandelion leaves, lettuce, or onion tops, cut in range is not accessible. As the guinea hen grows older, whole wheat, oats, and cracked corn may be fed.

The guinea's desire to roost develops at the age of six to eight weeks, though if raised with a hen these birds can be induced to follow her into a hen house and roost there. It is advisable to accustom the birds to the house, otherwise it will be almost impossible to catch them at market time. As a rule, wholesale prices for guinea hens in New York range from 75 cents to \$1 a pair for dressed springers weighing one pound apiece, and from \$1.25 to \$1.50 a pair for those weighing three to four pounds to the pair. Old guinea hens are not in demand and seldom sell for more than 50 cents to 75 cents a pair. One poultryman located near a New England summer resort raised as many as 400 guinea hens in one season, selling them in August, weighing one pound apiece, at \$1.25 a pair.

**Demand for Guineas.**  
A healthy demand for guineas as breeding stock pays from \$2 to \$2.50 a pair and \$3 to \$5 a trio for quality birds. The call for eggs for hatching purposes is greater than that for brooders, settings of 15 eggs from purchased birds bringing from 75 cents to \$1. There is some demand for day-old guinea chicks, one hatchery near Boston having handled as many as 2,000 chicks during a single season.

The marketing season for guinea hens is during the late summer and throughout the fall. The fowls usually are sold unplucked, as they look more attractive with the feathers on and sell more readily. However, for hotel and restaurant trade, guineas should be dressed in the same manner as other fowl.

**POULTRY NOTES**  
Granulated charcoal is very good for small chicks. It helps prevent diarrhoea.

The Cayuga ducks, a black variety, are very desirable to keep for home eating.

When a hen is not laying, her comb shrivels and shows white scales on its surface.

Hatch as many chicks this season as you can feed and properly take care of, and so more.

Chickens will not give adequate returns in eggs or growth when kept under insanitary conditions.

The only way to make progress in the poultry business is to breed from the best specimens only.

Grit helps the fowls to digest their food, and a box or hopper of it should always be within their reach.

**SCHEDULES OF TIME MAKE LEISURE FOR WOMEN WHO FOLLOW THEM CONSISTENTLY**

Wise Women Have Time for Reading as Well as Cooking.

(Prepared by the United States Department of Agriculture.)

One thing drilled day after day into the boys who are coming back from camps or overseas is "schedule," each thing done at that time. Housewives need that drill.

The argument will come up, "But woman's work is never done. It cannot be put in the same class with a soldier's life at all."

Woman's work is full of many tasks, it is true, but that is just why she should work by a schedule. Do you remember the day when you were a little girl that your mother told you you might go to Mary's to play if you finished washing the dishes by 1:30 and washed them well? You finished at 1:20, while the day before it had taken you much longer, and yet you had washed no more dishes. It was simply because you had an aim in your work and you concentrated on what you were doing. A judicious sprinkling of leisure-hour treats, if you do your work quickly and well, might have the same result now.

**Wasted Time Saved.**  
But more than that, making a plan of work or a schedule causes the "head to save the heels." It always pays and it makes a woman "watch her step" much more closely. It will avoid waste time and such calamities as having the cleaning of the dining room coincide with the meal hour. By its aid housekeeping is put on a businesslike basis.

"But what a hopeless task it is to foresee all the tasks in a day," a dis-satisfied voice says.

If you cannot remember all the work you do, watch yourself. See what duties there are that present themselves necessarily and what come from poor planning and mismanagement.

Are you one of those women who get cleaning spasms on days when the larder is low, and "just feel like baking" on the days when you don't need

any baked products? Or will you suddenly do you puzzle as to why you are so tired and then remember that the day before you had felt so energetic, that you both washed and ironed, for the fun of it? If you are puzzled then "schedule" is what you need.

**Making Weekly Schedules.**  
Woman's work is scheduled naturally by the week because of the regularity of her tasks. These must be taken into account as well as the day ones. Some which do not come often as once a week must be taken care of, too, in the budget of time. Each woman has different things to must attend to, so any schedule of budget of time will have to be suited over or used only as a pattern to be altered when necessary. Every day housekeeper has these tasks:

1. Laundry.
2. Marketing.
3. Special cleaning.
4. Sewing or repairing.
5. Thorough cleaning of house.
6. Cleaning of windows, silver, or tinware.
7. Cleaning of refrigerator.

If there are children in the house more tasks must be put in each of the lists.

**The Daily Schedule.**  
The list made, the next question is how to arrange the day's work. It will depend on the housekeeper herself, but she should have a preference and stay by it in order that her work may become efficient.

Such a schedule will make the usual observer appreciate the wisdom of a housekeeper. It will increase her own self-respect to see the things she is doing each day, but more than that it will increase her respect in housekeeping. To work by schedule will make her commander of her duties rather than their slave.

**HERE'S A SAMPLE MONDAY MORNING PROGRAM.**

- Rise, dress, put all beds to air..... 6:00-6:30
- Prepare breakfast..... 6:30-7:00
- Breakfast..... 7:00-7:30

- Make beds..... 8:00-8:30
- Prepare living room, dining room, kitchen and bath..... 8:30-11:00
- Prepare lunch..... 11:00-11:30
- Lunch..... 12:00-12:30

**CLOTHING BUDGET IS OF BIG IMPORTANCE**

**Purchase and Upkeep of Clothes Is Made Much Easier.**

Well-Planned and Intelligently Followed, Should Enable Men and Women to Be Better Dressed for a Given Amount.

(Prepared by the United States Department of Agriculture.)

Economy in purchase and upkeep of clothing is easier when expenditures are planned in advance. The woman who so plans and classifies her expenditures will set aside a sum for clothing based on the clothing she has on hand and the use she can make of it, on her own needs, and on her income. The clothing budget should be her guide when she buys. Even if she does not do just what she has planned she will be more likely to avoid mistakes than she would if she acted without giving the purchase careful consideration with respect to her expenditures in general. Budgets well planned and intelligently followed should enable men and women—for the budget system is equally valuable for both—to be better dressed for a given sum than when purchases are made haphazard, and frequently savings are possible. In the opinion of the department of agriculture home economics experts.

A budget—  
Shows the relative amount which should be spent for clothing as compared with other needs and the relation of the probable purchases to what one has on hand.

Shows the relative amount which should be spent for clothing as compared with other needs and the relation of the probable purchases to what one has on hand.

Shows the relative amount which should be spent for clothing as compared with other needs and the relation of the probable purchases to what one has on hand.

**HOW CAN YOU TELL YOUR FAVORITE TOBACCO?**

As Plain as the Nose on Your Face—Just Smell It

Smokers do not have to put tobacco in their pipes to find out if they like it. They can just rub the tobacco between the palms of their hands and smell it. The nose is an infallible guide to smoking enjoyment.

All smoking tobaccos employ some flavoring "to improve the flavour and burning qualities of the leaves", to quote the Encyclopaedia Britannica. Naturally, there is considerable difference in the kind of flavorings used, and the nose quickly detects this difference. TUXEDO Tobacco uses the purest, most wholesome, and delicious of all flavorings—chocolate. And the almost universal liking for chocolate in a great measure explains the widespread popularity of TUXEDO Tobacco.

Carefully aged, old Burley tobacco, plus a touch of pure chocolate, gives TUXEDO Tobacco a pure fragrance your nose can quickly distinguish from any other tobacco. Try it and see.

**Some Popular Misconceptions Concerning Tuberculosis (Consumption)**

That it is hereditary. This is absolutely untrue.

That grown people are susceptible to it. Grown people break down with tuberculosis, but rarely "take it." The germ is implanted in childhood. That a person who has tuberculosis should be shunned or avoided. Tuberculosis is different from some other contagious diseases in that one who has it, if careful, need not be a danger to others.

That it cannot be cured. Thousands on thousands of people are living and working today because of having taken the "cure" who otherwise would have been helpless or dead. That medicine will cure it. Fresh air, good food, rest and optimism are the only medicines that should be used except on a physician's prescription. "Patent" medicines are dangerous. That one wish to tuberculosis should "Should Go West and Rough It." Following this advice has killed thousands.

That no one will help or advise the tuberculosis. Call on your County or City Health Officer, Local Anti-tuberculosis Society, or write to the State Tuberculosis Sanatorium, Carlsbad, Texas, and you will be given authoritative advice.

For a few cents you can reach nearly 1000 families with a small want ad, cheaper than you could talk to them if you had them in one crowd. Try it.

Send the Review to your friends

**QUALITY AND PRICE**

**MONEY SAVED**

By selling your produce and buying your groceries at The Wilson Produce Co. Strictly Cash.

My black jack known as the Faulkenry jack, will make the season at my barn at Cottonwood, at \$12.00 insured.  
J. A. Joy, Cottonwood, Texas.

**Beware of Ointments for Catarrh That Contain Mercury**

Mercury will surely destroy the tissue of the nose and completely destroy the whole system when entering it through the mucous surface. Such articles should never be used except on prescriptions from reputable physicians, as the damage they will do to the body is too great to be possibly done from them. Hall's Catarrh Cure, manufactured by Dr. J. C. Cheney & Co., Toledo, O., contains no mercury, and is taken internally, acting directly upon the blood and mucous surfaces of the system. In buying Hall's Catarrh Cure be sure you get the right one. It is taken internally and not a 31 Toledo, Ohio, by Dr. J. C. Cheney & Co., Toledo, Ohio.

**TAN-NO-MORE**  
The most scientific and most wonderful facial preparation of the modern age. It imparts to the skin a velvety softness and delicacy which is due to lightness and pleasant in its effect. Used during the day it is a protection from the Sun and Wind. In the evening it secures a faultless complexion. 25c. 50c. 1.00.

### Texas News

An \$80,000 school bond issue was successfully voted at Amarillo.

The merging of the two telephone systems of Taylor has been effected.

Stockmen report the loss of many cattle in the Ballinger territory from "wood blot," caused from eating weeds.

While boring for water near Yorktown a few days ago the driller struck a gas pocket at 185 feet, blowing out the drill pipe and bit.

Plans are being drawn for a court house for Live Oak county at George West, the county seat having been moved from Oakville to George West.

The annual spring movement of live stock has started in Brewster county. Several carloads have been shipped in from the stock shows to improve local herds.

Seven different tracts of land, comprising a total of 14,037 acres, located within a short distance of Laredo, have been leased by oil men for oil and gas operations.

The pink boll worm situation in the Big Bend district of West Texas and in the Pecos Valley is well under control, according to Chief State Entomologist School.

Obispo county is just completing the work of building the Jim Hogg highway No. 37 from the Smith county line on the north to the Angelina county line on the south.

The Texas railroad commission this week formally suspended pipe line order No. 3 and issued notice of hearing for April 25 to consider a number of matters bearing on pipe lines.

The business done by the Federal Land Bank of Houston for the month of March proved it to be one of the best on record. During the month the bank received 1,956 applications for loans aggregating \$3,677,983. Of this number 622 applications for loans amounting to \$2,718,361 were approved. Loans numbering 602 were closed and amounted to \$1,838,717.

Records show that at the three Fort Worth air fields, where flying practically ceased last week and all enlisted men were discharged, 106 men were killed from November 7, 1917, to April 1, 1919. During the time the British Royal Flying Corps trained its squadrons fifty students, officers and mechanics met fatal mishaps. Since the Americans took over the fields fifty-six have been killed.

Work will soon be completed on a modern rifle range at the Agricultural and Mechanical College, where the cadets will be given practice at target shooting at a range of 2,500 feet. The range was begun nearly two years ago, but the inability of the government to supply ammunition for the practice, due to war demands, caused the abandonment of the project at that time. Plenty of ammunition is available now, and the students will get abundant practice.

Answering an inquiry from Floresville, the attorney general has advised that the legislature qualifications on voters which are not included in the constitution. The question was asked in the abstract and its particular application is unknown. The Dean bill passed by the last legislature provides that no assistance shall be given voters unless they are physically infirm or are over 60 years of age, and, in such cases, it shall be given in the English language.

Of the \$2,500,000 appropriation by the war department for the improvement of border posts and stations, it is understood that Fort Brown at Brownsville, Texas, will get about \$250,000. Six new brick barracks and twelve officers' quarters were authorized at the Fort Sam Houston conference, and plans for their construction are now under way. Work will begin soon. A mile of railroad track will be built into Fort Brown from a local railroad connection.

New regulations governing travel across the border from Texas into Mexico, receipt of which was announced this week by United States immigration authorities at Brownsville, make it comparatively easy for travelers, tourists and border residents to make trips across the border. However, persons desiring to go further into Mexico than forty miles beyond the border will be required to have state department passports. Verbal applications for permits may now be made direct to immigration officers at the border, the only requirement being that applicant be an American citizen.

A call has been issued by Adjutant General James A. Harley for a State convention of all returning soldiers of Texas to be held at San Antonio April 21, for the purpose of effecting a temporary organization to keep together those men who have seen service. It is planned to lay at this temporary convention the foundation for a State association, which can afterward be affiliated with a national organization of veterans of the world war. Adjutant General Harley has been requested to take the initiative in the movement.

## Make Victory Complete

Only by finishing the job can this be done. Only by providing the money to gather up the loose ends and round off the rough, projecting points that still remain.

Our boys made Victory! It's our duty to make it complete by an overwhelming subscription to the Victory Liberty Loan.

Victory Liberty Loan Committee

This space contributed by

## Farmers National Bank

## Wind Storm Damage

Of the most destructive wind storms of recent years visited a large section of north Texas and Oklahoma recently, killing more than one hundred and destroying millions of dollars worth of property. Contributions are now being solicited from the leading State papers for aid of the distressed people. Likely very few of them were insured against tornadoes. Your property is not safe without tornado insurance. Now is the time to protect home. Be insured in a good company and if tornado comes you will not have to beg for help. We represent the Home Insurance Company of New York, the largest fire insurance company in America, and a number of others that are among the best.

Wind-storm damage, against which neither your Strength nor Wisdom can avail. The rate is very cheap.

Give you protection against hail on your grain and stuffs in the old Home Insurance Company. The next few weeks a hail may come and your crop, which now is the most promising. Be safe and you'll not be sorry.

## L. P. HENSLEE

### Private Office.

Telephone Company erection of its conditional building preparatory to rebuilding the same. It will be put back in about the same condition it was before the fire, and will have practically the same arrangement of offices. Six or seven men are employed on the job.

### Rebuilding Bank.

Workmen are now busy tearing down the top of the Farmers National Bank building preparatory to rebuilding the same. It will be put back in about the same condition it was before the fire, and will have practically the same arrangement of offices. Six or seven men are employed on the job.
