The moisture condition here has improved vastly but it is still far short of the community's need. Additional small showers the last three days of the month added to 1.09 inch and upped the May total to 3.25 — which was slightly more than the combined rains of the

previous four months. The year's measure to now 6.44 inches, which happens to be one third to one half of normal for this time of the year. By comparison total moisture through May last year was 14.24 inches. It was 20.39 in 1969 and 22.35 in 1968. The moisture brings on visions and hopes for normal crops the rest of the year. Reports are that sorgum, milo and hay crops all have a good potential, provided, of course that rain will be favorable from now on. If so, it can dispose of a major problem next winter.

Control Criminals Not Guns

For too long now, our permissive society has stood aside while the criminal element has run rampant - killing, maiming, robbing and rioting - and the only solution the anti-gunners can come up with is gun control.
