## TP&L customers want to know: "How do rising fuel prices affect my

Texas Power & Light generating plants require enormous quantities of natural gas, lignite coal and, when deliveries of gas are curtailed, fuel oil, to produce electricity.

TP&L's 1974 fuel costs were more than double the costs in 1972, and will be more than \$160,000,000 in 1975, 70% greater than in 1974.

Unlike most businesses, we cannot raise the basic price of electricity as the costs of producing it go up. Our rates are established and altered only by resolution or ordinance of City Councils. For this reason, TP&L, and virtually every electric company in the nation, has a fuel adjustment provision in its rates.

When TP&L's cost of boiler fuel exceeds 20 cents per million BTU's (the equivalent of 1,000 cubic feet of natural gas), the adjustment provision permits us to pass on to our customers the additional cost. We make no profit on the fuel.

Beginning this month, a notation on your electric bill will show what the per-kilowatthour fuel charge is for the month. Multiply this amount by the total number of kilowatt-hours on your bill and you have the fuel adjustment charge. Every customer pays the same fuel adjustment rate for each kilowatt-hour used.

#### "What is TP&L doing to offset rising fuel prices?"

To offset the rising prices of natural gas and fuel oil, TP&L is constructing large generating units which will use relatively low cost lignite coal. Two such units have been in operation since 1972. Eleven additional units are scheduled to be placed in service in the period from 1975 to 1982.

We want our customers to know why the fuel adjustment charge is necessary and how it affects the price of electric service.
