## . Lowers . . . Regulates Integral and Drawn Equipment

There's no reaching for hand lift levers ... no lifting and lowering by hand ... no tugging on ropes when you operate a John Deere tractor equipped with the sensational new John Deere Hydraulic Powr-Trol.

Drawn implements-plows, drills, mowers, combines, corn pickers, etc.—are raised and lowered or set in any desired position ... disk harrows are angled and straightened down, at a touch of your hand on a convenient lever. Safe, positive, hydraulic power does the job through a remote cylinder which attaches on the implement.

Integral equipment is raised, lowered, and regulated from the rock shaft in the same manner and by the same lever.

The new John Deere Powr-Trol means easier, faster, better work on every job-and it's an exclusive John Deere feature. Stop in and let us tell you more about it.

DEDDY KILOWATT'S five year war record stands out as one of the great industrial achievements of all time. During this period, more than eleven million kilowatts of generating machinery were installed and \$3,000,000,000 was spent for power stations, transmission lines and other facilities.

A total of 300,000,000,000 kilowatt hours of electric power was generated for war purposes, of which the business-managed, tax-paying electric companies supplied 831/3 per cent.

Revenue from the sale of power generated for war purposes amounted to \$2,350,000,000 and almost the same amount, \$2,194,000,000 was paid in direct federal taxes.

Oh, yes! During this five year period, price of electric services by business-managed electric companies was reduced by 11 per cent.

That's freedom of enterprise at work when all the cards are down.
