POULTRY

FATTENING MARKET POULTRY

Great Variety of Feeds Can Be Used in Preparing Fowls—Broilers Grow Rapidly.

Prepared by the United States Department of Agriculture.

The most desirable types of fowls and the most profitable feeding periods for the different classes of poultry fattened in packing plants are discussed in Department Bulletin 1062, *Rations for Feeding Poultry in the Packing House*, just issued by the bureau of animal industry of the United States Department of Agriculture.

Since the raising of poultry has become a large industry in the United States, information of the kind contained in this bulletin should be of a great deal of value.

The results obtained in the experiments reported in this bulletin show that a great variety of feeds can be used in fattening broilers, springs, and roasters and, a fortunate situation since it permits the feeder to adapt his ration to market conditions.

Table, fix my napkin, look over a card upon which is written the names of the different kinds of dishes to be had.

Young Plymouth Rock Broiler.

Apply the necessary carbohydrates and fats. More care is needed in selecting feeds for protein, salts and amines.

There are the spider monkeys. They use their tails as hands. I mean that each uses his one tail that way—they have but one apiece.

"And there are many different animals in this zoo. I shall introduce you to a few of them."

"I'd like to have you know Mr. Hairly Armadillo from South America, who is able to roll himself into a horny ball when enemies are near."

"You will have to go around the zoo later and see these creatures for yourself, but I'll tell you what I can about them and what I've heard the keeper say."

Those interested in the fleshing of poultry may get this bulletin by addressing the Department of Agriculture at Washington, D. C.

CHIMPANZEE'S SECOND TEETH

"It amused me," said the chimpanzee, "when I heard a child in the zoo the other day speak of getting her second teeth as though she were so superior."

"Now I get second teeth, too. Oh yes, I do. In fact, I have my second teeth."

"The keeper understands that and he understands what it is I want, and the people like to see me write down my orders, so I do it to please them."

"I have many relatives in the zoo—some of them are rather distant cousins, but still they are relatives."

"There are the spider monkeys. They use their tails as hands. I mean that each uses his one tail that way—they have but one apiece."

"And there are many different animals in this zoo. I shall introduce you to a few of them."

"I'd like to have you know Mr. Hairly Armadillo from South America, who is able to roll himself into a horny ball when enemies are near."

"You will have to go around the zoo later and see these creatures for yourself, but I'll tell you what I can about them and what I've heard the keeper say."

"Kidnap" Camera. When you inquire about the big camera the station photographer uses in taking the 1 1/2 inch square photos for the 50-trip family ticket says, "Oh, it is a special one we used years ago for kidnaping."

What do you mean—kidnaping? He laughs kindly at your ignorance. Why, you know," he says, "we take camera and go out on the street and see a little boy and take his picture. We get his name and address and by, after we develop the picture we go around to his home and take it to his mother. If she likes the picture, she buys one. That's all."

Full Bloom. Little Mary was visiting her grandmother in the country for the first time.

JUST FUN

HE UNDERSTOOD

"You admit you were speeding?" "Yes, your honor." "A frank confession goes a long way in this court. What excuse have you for exceeding the speed limit?"

Part of a Collection. "Just a moment," interrupted the defendant's lawyer. "You say you despise this man you are suing for \$50,000, yet you bring his alleged love letters into court carefully tied up with a pink ribbon."

An Emergency Case. "Where are you going in such a hurry?" "To see a friend of mine," said Mr. Gadspar. "He needs my advice."

Musical Note. A very deaf old woman walking along the street saw an Italian turning a peanut roaster. She stood looking at it a while, shook her head, and said: "No, I shan't give you any money for such music as that. I can't hear any of the tunes, and besides it smells as if there were something burning inside."

Something in a Name. "Now here's a neat bungalow," said the real estate agent. "Just the thing for you, and only \$5,000."

HELPING HIM OUT "Your cousin's medical practice, I suppose, doesn't amount to much yet?"

Information. "A man in your position cannot know too much," remarked the admiring friend.

Nothing Doing. "What do you refuse to loan me \$20—me your intimate friend, whom you once called your alter ego?"

Wiser. Burrows—Sorry, old chap, but I am looking for a little financial succor, again.

Proof of Devotion. "Tom proposed to me last night." "Did you accept him?"

His Comeback. Wife (bitterly)—The kind of woman for you to have married is a silly fool.

Argentina beef can be placed on the American market for 12 cents a pound with good profit to the dealer according to a New York banker.

Manufacturers in Sweden are making a new type of cut glass, cheaper than plain glass and more beautiful.

SEX OF EGGS AND CHICKENS

Department of Agriculture Says There is No Dependable Method to Determine Sex.

(Prepared by the United States Department of Agriculture.) Raisers of poultry have long wished for a reliable means for determining the sex of chicks and of eggs to be used for hatching, but, in spite of the promise of various manufacturers of devices, the United States Department of Agriculture says there is no very dependable method for determining the sex of chicken that a certain egg will produce, and that it is extremely difficult to determine the sex of chicks of most breeds.

The department has made tests of a number of devices claimed by the

Barred Plymouth Rock Cockerel.

makers to give good results in sorting out male, female and infertile eggs. In all cases they have been found to be useless for the purpose, as two persons could never get the same result with a lot of eggs, and hatching tests showed that one could do just as well by closing his eyes and picking out the eggs at random.

On account of the difference in the color of the down of the sexes it is often possible to select with considerable accuracy the hens and cockerels of the Barred Plymouth Rock as soon as they are hatched, but in the case of most other breeds and varieties this selection cannot be made with any certainty until some time later. Those who know the breed well are able to distinguish between the sexes of Leghorns when they are three to four weeks old. The sexes of the medium-weight breeds, with the exception given above, have the same appearance until the chicks are 10 or 12 weeks old. The Asiatic breeds are not as apparent up until the birds are three or four months old.

There may be differences that will make it possible to sort the sexes earlier, but so far poultrymen have found no reliable basis for selection.

GREAT IMPORTANCE OF OATS

Used in Ratio of Growing Chick It Does Much to Build Up Strong Frame and Muscle.

The importance of oats in the poultry ration cannot well be overlooked. It forms the backbone in many rations. It is chiefly important in the growing ration for young chicks, for it will grow frame and muscle more economically than any other grain. Steel-cut oats, rolled oats, or growing mash—having ground oats or oatmeal as a base—are exceptionally economical feeds for growing stock. Fed in connection with buttermilk, it makes the best growing ration now known. Of course, a grain mixture should be fed for variety.

DOULTRY NOTES

Confine the hen until the chicks are weaned. ... The busy hen is the one that lays the most eggs. ... Chicks should not receive feed until they are 36 hours old. ... The baby chick will not stand chilling. It must have access to heat whenever it desires. ... Toe-mark the chicks as soon as they are hatched. This enables one to tell their ages later. ... Disease control and sanitation are among the most important things in poultry management. ... Chicks chilled at some time early in their development keep dropping off even after attaining considerable size. ... The coop for hen and chicks should be well ventilated, easy to clean and of sufficient proportions to insure comfort. ... The cockerel that can be marketed as a broiler in March or April brings more money than the one marketed in June. ... In cold weather ten to thirteen chicks are sufficient for one hen, while in warmer weather fifteen to twenty can be cared for successfully.

"Thunderclap"

A TRIUMPH OF EMOTIONAL And SPECTACULAR DRAMA

A woman paralyzed sits in a chair, unable to move while those she loves are threatened with danger, and a great drama moves around her. Helpless she watches and only with her eyes does she give indication that she knows what is going on. This big emotional moment is in "Thunderclap."

Unless the girl marries the man he has picked for her, the gambler is doomed to die at a certain hour. With his pistol on her mother, he tries to force the girl to consent. But fate steps in at the door and saves her. That is a big dramatic moment in "Thunderclap," the most heart filling drama ever written.

Monday and Tuesday, Sept. 4 and 5

The Palace Theatre

PORCH ROSES

By MILDRED WHITE

Betsy Rose glanced covertly at the face of the man who sat near. He was very difficult to understand, this man, with his moods of depression and his evident joy in her companionship. "If he loves me," thought Betsy Rose, "and surely he must know that I love him, then why is he not happy all the time?" It was a perplexing question. Douglas Barton got up from the hammock to pace restlessly the veranda floor while Betsy went thoughtfully to fasten a drooping Dorothy Perkins rose to the trellis. "I must go back to the city," he said to her abruptly. Betsy turned her violet eyes upon him in surprise. "The country wears you? Aunt Libbie will be sorry. She has enjoyed having you with us."

"And it was kind, indeed, of your aunt to take me in. The country does not weary me. I should like to stay here forever—with you." The last words were a whisper. "Then," asked Betsy Rose, the pink roses nodding above her brown head, "then why must you go?" "Do you remember," he asked her gently, "the first day that, driving by chance down this road, I found your house and stopped to ask for a drink of water? It was a hot day, and dusty, and you in cool white stood in this same little porch among the pink roses. That was nearly a year ago. And after a time I came back to ask that I might stay for the night. The moon was out then and there was a stillness and desolation in the air. I thought that I should never forget that scene of desolation, but I have forgotten it; you have taught me. And since that evening in the moonlight porch I came again—and still again. As your roses budded and blossomed so did my love for you, until now it is a perfect flower; a flower my heart would offer you, little Betsy Rose, if I dare, because I feel that you will not be able to understand when I have told you a story. I dare not offer it. So, I must go away."

POULTRY

PIGMIES OF POULTRY WORLD

Bantam Breeds Have Distinct Utility Value for Egg Production for Family Use.

(Prepared by the United States Department of Agriculture.)

The Bantam breeds gained their popularity as ornamental fowl and as playthings for children and grown-ups, but, says the United States Department of Agriculture, they have also a distinct utility value for egg production for family use. There is also a good demand for eggs for hatching and for breeding stock of good quality. Because of their small size these pigmy breeds often have the advantage over larger fowls where only a very small space is available for the flock. They are easy for children to handle, and the ownership of a few Bantams often is the beginning of a real interest in poultry raising.

White Cochon Bantam.

The various breeds of Bantams, their characteristics, and methods of management are discussed in Farmers' Bulletin 1251, The Bantam Breeds and Varieties, the fifth of a series on Standard Varieties of Chickens. The various breeds, says the bulletin, have not been raised with the idea of egg production and, as a result, the average is not very high, probably around 175 eggs in a year. The eggs vary in size, as do the different Bantam breeds, ranging from 12 ounces a dozen to 18 or 20 ounces. The color of the eggs runs from white to dark brown. Some of the breeds have a tendency to lay for a fairly long period, but the Brahmans, Cochins and Silkies are apt to be broody. Since many of these kinds have been developed from the larger standard breeds they have many of the same characteristics.

FIND HIDDEN TURKEY NESTS

When Confined in Pen Until Late in Day, Laying Hen Will Go Straight to Her Eggs.

A quick and easy way to find stolen nests of turkeys is to confine the birds from early morning to late afternoon. The laying hens will then go straight to their nests to lay the eggs which they are holding, say poultry specialists of the United States Department of Agriculture. When turkey hens have free range they nest usually in obscure places and often wander a half mile or more from home before they find a nesting place that suits them. If attractive nesting places are prepared about the barnyard, the turkeys sometimes lay in them. Such nests are easily made from boxes or barrels, or by scooping out a little earth in the shape of a shallow bowl, piling brush round it to satisfy the hen's desire for seclusion. The nest most preferred by turkeys consists of a barrel laid on its side, in which straw or hay is placed. When confined in a breeding pen several turkey hens may lay in the same nest, but on free range each bird usually makes her own nest. Turkeys do not range far during cold weather. In the north, where the laying season often begins when there is still snow on the ground, the hens are more likely to select their nests near home.

LEAKY POULTRY HOUSE ROOF

More Annoyance From Damp Quarters in Spring Than in Winter on Account of Rain.

There is usually more annoyance from leaky poultry house roofs in the spring than in the winter, because more rain occurs. Also, in winter, ice and snow may remain for weeks on a roof without melting, and really assist in protecting against the winds; but in spring, when the rains will be opening, the melting rains will be opening up the roof joints. Roofs should be inspected at once, if there are any leaks, to prevent all or the result of damp quarters and the sick

Daddy's Evening Fairy Tale

By MARY GRAHAM BONNER

PATIENT PIGS

"Good-day, good-day, grunt, grunt," said Grandfather Porky Pig. "How do you do, squeal, squeal," said Miss Ham. "Good-day, grunt, grunt," said Sammy Sausage. "How do you do, squeal, squeal, grunt, grunt," said Pinky Pig. "Good-day to everyone," said Pinky's mother, "squeal, squeal, good-day." "Hello, hello, squeal, squeal," said Sir Benjamin Bacon. "Squeal, squeal," said Brother Bacon. "How is everyone?" "Grunt, grunt," said Sir Percival Pork. "It's a fine day." "True, true, squeal, squeal," said Master Pink Pig. "We have talked enough," said Grandfather Porky. "We are all too polite. I thought perhaps that by being polite we would be rewarded and that food would be brought sooner." "Just what I thought, grunt, grunt," said Miss Ham. "Exactly the thought I had, grunt, grunt," said Sammy Sausage. "My very thought, too, squeal, squeal," said Pinky Pig. "I had the same one as well as the rest of you, grunt, grunt," said Pinky's mother. "I thought surely if I was polite I'd get some food sooner," said Sir Benjamin Bacon. "And no food has come as yet, grunt, grunt." "I will never be polite again," said Brother Bacon. "You were all being polite, and it didn't sound natural, and

"Suddenly Found Himself Alone."

I thought that it must mean something, so I was polite, too. I didn't want to miss anything. No, indeed, grunt, grunt." "I thought the same as Brother Bacon," said Sir Percival Pork, "and here I have been fooled. Grunt, grunt, squeal, squeal, I have been fooled." "Yes, and I have, too, been fooled, squeal, squeal," said Master Pink Pig. "The trouble has been we've all been too patient. We've been waiting for our food and none has come. We've been much too patient." "Of course," said Miss Ham, "we might just as well be patient. No food has come." "Ah, Miss Ham, lots of creatures are impatient when they might just as well be patient, and when they get nothing by being impatient." "We have been too patient. We have not acted like pigs. We have acted as though we were fine, sensible creatures with patience and good sense, and all sorts of silly things like that." "However, I think it is interesting to think that we have been patient." "I almost feel as though in all the city parks and in all the country squares there should be monuments put up, and upon the monuments should be inscribed: "The pigs have been patient. The more foolish they." "Why, Porky," squealed Miss Ham, "they couldn't put that on a monument." "Why not?" asked Porky. "Can't they put anything on a monument? One word would go as well as another. I should think they could put anything on a monument that they wanted to have there." "I should think that." "But, porky, your thoughts aren't the very greatest and most sensible thoughts in the world." "No, indeed." "And upon monuments there should always be noble words. Now they might put on the monument: "This monument was erected in honor of the Pigs. They have been noble citizens, brave granters and splendid eaters." "I don't know whether that would just do or not, but that is the idea." "And I think it is a good idea." But Miss Ham suddenly found herself alone, for the food had all been rushed to it. She did the same now, and as she hurried over to the farmer she said to herself: "Patient Pigs is a phrase that sounds well, even though it hasn't much sense to it. Oh, well, let's not worry about a monument unless it could be a monument of food!"

Giving Up the Game.

Twenty thousand people committed suicide last year in the United States, which fact seems to be a reflection upon our well-ordered life, writes William Allen White in Judge. It would seem that the great panorama which history is unfolding before us day by day, forever beckoning with its tomorrows and luring us with big events just around the corner from today—it would seem that that gripping panorama ought to hold us all in our seats upon this planet. We may be hungry, we may be forsaken, we may be cold, sick, unlovely and unloved, and yet it would seem that the daily story of life about us, the great tragic events that are looming before us in Europe and in Asia, and the great comedy that should cramp our sides with anguished laughter here in America, should hold us tightly upon this planet. Yet 20,000 of us have voluntarily got up and walked out, left the show cold and flat and for what? Perhaps they are going to the big show, perhaps they are only going to bed. But they are missing a mighty good thing, nevertheless. The spinning world never before has held so much to charm the eye and engross the soul as it holds today.

Hospital for Plants.

A hospital for plants is the latest device, designed by an ingenious Englishman, for the aid and comfort of lovers of flowers, who are often distressed at sight of their favorite plants ailing and dying from maladies for which they know no cure. When a sick plant is brought to the hospital, it is immediately examined and sent to the room prepared for its use. If it is suffering from a cold it is tended with heat; if it has become anemic from an excess of solar rays, it goes through a freezing treatment. The unwholesome branches are removed, while those that are anemic are fed. It seems that certain plants are very nervous. Some easily get nervous, while their neighbors show undeniable symptoms of hysteria. But special managements permit the application to each of them of the treatment it requires.

Life-Saving Watercycle.

A watercycle has been invented by a Wisconsin man which can be used for life-saving purposes or as a pleasure craft for bathers. The frame is made of aluminum tubing and is of knockdown construction held together by thumbscrews. Buoyancy is supplied by two air-inflated tubes, in balloon-cloth cases, which slip over the side tubes of the frame. The watercycle is forced through the water by a gear-driven propeller which is operated by bicycle pedals, the machine being steered by a rudder and handlebar.—Popular Mechanics Magazine.

Also makers of KELLOGG'S KRUMBLER and KELLOGG'S BRAN, cooked and krumblered.

Studebaker The Light-Six Now \$975 So far this year Studebaker has built and sold more cars than during the entire year of 1921. And 1921, in spite of a general business depression, was the biggest year in Studebaker's 70 years' history. This steady volume of business, plus the savings resulting from Studebaker's methods of complete manufacture, reduces manufacturing and selling costs. And it is a Studebaker policy of long standing to share these savings with the customer. Hence, the new low prices. That's why you can buy a Studebaker Light-Six today at its new low price of \$975—the lowest price for which it has ever sold and the lowest at which a car of such quality was ever offered. Only the price is reduced. Quality is better than ever. Stop in and see the Light-Six. Let us demonstrate its easy handling, its lack of vibration, its great comfort. Let us prove its endurance. Then drive it yourself. Cord Tires Standard Equipment

Table with 3 columns: MODEL AND PRICE - f. o. b. factories, LIGHT-SIX, SPECIAL-SIX, BIG SIX. Rows include Touring, Roadster, Coupe-Roadster, Coupe, Sedan with prices.
