GRAHAM CRACKERS

Friona is rolling out the welcome mat for the first Maize Days this weekend. Prospects for fair weather appear good, and if we do get a decent break from the weather man, everything will come off okay in all probability.

As you know, Maize Days replaces the 50th Anniversary Celebration held last year. There may be other Maize Days; there may be a Harvest Festival or a Cotton Week or Pioneer Days or an Old Settler's Reunion or something or other like that in the future. It appears that a yearly celebration of some kind is not only needed but wanted by the residents of the area, so you can look forward to this as being sort of an annual occasion.

Bob Ginsburg, who has little more than gotten his feet wet in the community, is doing a sterling job of steering the Maize Days this year. We know that Bob will breathe a sigh of relief when the celebration is finally over.

The Maize Days celebration requires so much work that it is given separate treatment by the chamber of commerce, which backs the promotion. Bob deserves special recognition for the sweat he has invested in this year's show.

Something that slipped right by us unnoticed last week was the fact that The Star was supposed to celebrate its birthday. Thirty-three years ago The Star began its first publishing activities here in Friona.

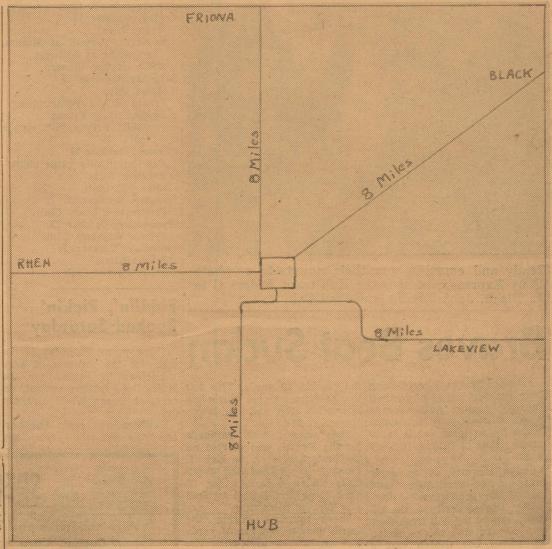

Of course everybody's too interested in celebrating Maize Days to pay much attention to us this week, so we'll just say "Happy Birthday!" to ourselves and go on about our business.

on the eve of the Texas-Okla- stationed eight miles from the homa football game. Two or three people hinted they didn't believe it could be that bad.

After looking at the front pages of daily papers Sunday, we believe it WAS that bad, and it looks as if it still is. Maybe it's even worse. At any rate, we have more sense than to get into any more brawls like that.

Leland Boyd is sure a stickler for the Friona Chiefs. He has film the race. been telling us all along that the Chiefs were coming up every

Leland is sure flying high (as high as that wind-catching beard will let him) this week after the Chiefs upset the Bucks at White Deer. We didn't drive up to see the game, but Leland did and he says the win was sure no fluke.

THE STAR'S EDITORIAL COMMENT

The Friona Star

Member Texas Press Association

In Parmer County Elsewhere \$4 Per Yr.

Entered as second class mail matter July 31, 1925, at the post office in Friona, Texas, under the Act of March 31, 1897. Published each

The Friona Star salutes the planners of the First Maize Days ever to be staged in the world. It is news over the entire area now, and later will be history for coming generations.

The attitude of the Friona Star is expressed adequately and aptly in a letter from the Chamber of Commerce and Agriculture President J. C. Claborn, published below:

To Area Residents-Maize Days Visitors,

The Friona Chamber of Commerce and Agriculture extends to you its invitation to participate in and enjoy the 1957 Friona Maize Days. It is for you!

In bringing this celebration to you, we feel that it is for the purpose of offering you an opportunity to have fun, to meet your neighbors in a festive atmosphere, and to create a feeling of neighborliness between the people of Friona, and the people of towns and communities of Parmer County. We want you to feel that it is your time to have fun.

The events have been planned so that you can view them, or actually enter the competition. For instance, there are floats which you are decorating, the exhibits which you are preparing, the contests which you can enter, and of course, the barbecue, of which you will want to get your share.

This event is the exclusive Maize Days for the entire High Plains, and throughout the state, and the nation. It is a bountiful crop, and we recognize it as the leading product of this county, and this area.

And we recognize you, the residents of the town, of the surrounding communities and towns, as our neighbors, the leading producers of the leading crop

So this invitation is to you. Come and reap your share of the contest prizes, and of the Maize Days

find it here.

10 W-30 MOTOR OIL

Oil is based on the fact that the typical pas-

senger car engine operates most of its useful life

in the temperature zone between the cold start

All oils thicken as temperature decreases. The

ventional oil is that it thick-

ens less at low temperature.

The effect on your car's performance is important.

When you change to Shamrock 10W-30, the im-

provements you'll notice

immediately are: (1) that

even on the coldest mornings

the engine will turn over

quickly and easily, and (2) a

marked increase in gasoline

sarily the most important. Frictional wear in the engine

takes place at a very high

rate during the first few

strokes when starting an

These advantages are the most obvious, but not neces-

difference between Shamrock 10W-30 and con-

engine with little or no lubricant on the cylinder

walls. 10W-30 reduces this wear, flowing quickly...

replenishing the oil film. At high temperatures a

thicker lubricant does a better job of keeping metal

surfaces apart. Accordingly, 10W-30 being thick

and normal operating temperatures.

Miss Cramer is currently employed by a well equipment company in Fort Worth. Carroll Mercers Honored farms west of town, where the With Gift Shower ouple plans to live.

Farmer's

Fertilizer

Out A Maize

Now is the time to apply

PHILLIPS 66 AGRICULIURAL AMMONIA

Here are the facts on fall applied agricultural ammonia fertilizer.

- 1 You get your nitrogen into the ground early no gamble on spring weather that can keep you out of your fields when your crops are all set to get up and grow.
- 2 Cool, moist soils retain nitrogen. It stays there in the ammonia form where your crops can reach it next spring.
- 3 Crop residues are decomposed fertility and soil tilth improved with fall applied Phillips 66 Agricultural Ammonia and fields are easier to work next spring.
- 4 Pastures, hay meadows and small grains produce more forage, longer and better grazing when fed in the fall with Phillips 66 Agricultural Ammonia.

Sec ... joi just sujormation on your next trip to town!

SCHOOL'S OUT FRIDAY, WOOHA!

Thanks to Friona's 1957 Maize Days, the Friona school will be closed Friday and the more than 1,000 students at the school and their parents will have an opportunity to take in all of the events during the two-day celebration.

The school board Monday night of last week voted to declare Friday a holiday That it would be difficult to have good attendance at school during such a time was pointed out by the board so the day of "no school" was passed.

And from the school are to be entered six floats in the Maize Days parade. Last minute preparations can be made during Friday morning before the Friona FFA chapter is

planning to enter a float and an agricultural exhibit, to be displayed at Hurst's. Friona Band will be marching with the parade.

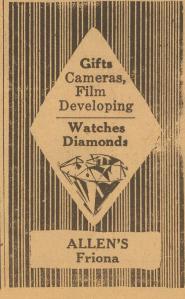

Maize Farmers Eligible For **Tractor Contest**

Maize farmers, from the ages of 14-years-old and older, are eligible for the Friona Maize Days tractor driving contest to be held in the city park, Saturday at 8:30 a. m.

Supervisors of the contest J. T. Gee and Leland Boyd, say two divisions of the contest will be staged-one for younger farmers from 14 to 18, and an open division for all

Skills needed, the supervisors say, include accurate backing of a trailer, and patience when the trailer does not follow the desired path. Speed in accurately backing a trailer behind a tractor will be the most important skill for winning in the

Persons who want to participate in the event, and compete for the prizes, totaling \$35, should report to the park at 8:15 a. m. Saturday to get registered for the contest.

County Indebtedness: Road & Bridge Machinery Warrants\$19,700.00 tion, Federal Crop Insurance Right of Way Warrants 30,000.00 Total Indebtedness

THE STATE OF TEXAS, COUNTY OF PARMER: Before me, the undersigned authority, on this day personally appeared Mabel Reynolds, County Treasurer of Parmer County, who being by me duly sworn, upon oath, says that the within and foregoing report is true and correct.

MABEL REYNOLDS, County Treasurer Sworn to and subscribed before me, this 10th day of October, 1957

HUGH MOSELEY, Clerk, County Court, Parmer County, Texas

10 years).

Fountain of Freedoms...a Free Press

THE history of the press, since its development five centuries ago, has been a history of restraint. It is natural for men in authority to resent the sting of criticism. It is human for them to be ambitious, and to seek to entrench themselves. Hence rulers often avoid criticism and disagreement by stifling it. 11 But the courageous men who founded this new nation sought here full freedom for each individual. When they established a constitution, aware of the human frailty even of rulers elected from among them, their First Amendment provided that "Congress shall make no law...abridging the freedom of speech and of the press...." 11 With the widespread education and enlightenment that resulted, the people here have advanced farther toward all freedoms than the people of any other nation. The beacon of this Western World, marks for all nations the start of the path to Freedoms: Freedom of Speech and of the Press.

IT'S A REAL MAIZE FARMER'S TRACTOR

Conditions Affect Opinions on Value of New Hybrids

Hybrid grain sorghums are getting a tremendous play in the farm press, and well they should since this most recent development has been accomplished under difficult laboratory conditions.

However, their performance under actual growing conditions on the High Plains varies considerably, and as factors affecting growth and plant development change, so will the hybrid's ability to produce

Probably the most noticeable instance of production fluctuation is in the amount of moisture and plant food available.

Two farms were visited by High Plains Farm & Home during the past week to see how different factors affected production and the farmers' opinions about hybrids.

The first was the farm of Raymond Schlabb, who lives east of Black. Schlabb lives in a neighborhood widely known for its grain producing ability. High yields of grain sorghums and wheat are more or less customary. Land is heavy and deep, and water is abundant. This year, Schlabb has had

his own private experiment station, and is growing six varieties of grain sorghum. He has four hybrids and two standard varieties, and grows them under identical conditions so he can see for himself how they compare with one another.

This year, the crop that Schlabb is expecting to produce the most is not one of his hybrids, but a standard longmaturing variety, Caprock. He has 120 acres of this mile that he hopes to average 6,500 pounds

Schlabb does not discount the advantages of growing hybrids. For one thing, he already has harvested one field of hybrid that made 5,700 pounds—nothing to be ashamed of-and it will be The crop received only one water needs. He doesn't run his until after frost before his Cap- irrigation during its growth. | well on Sundays, either. rock will be ready to combine.

"I'll put my Caprock up

last year. The land had been pre-watered, and the crop received five irrigations during the growing season. Schlabb says about 12 inches of rain benefitted the crop, too. Previous to plowing last fall, 120 pounds of anhydrous ammonia were applied per acre.

Schlabb obtained a very heavy stand of his Caprock by using the double-row system of seeding two rows on each 40-inch bed. His seeding rate was seven pounds per acre.

Early planting encouraged a nice stand of weeds which had to be hand hoed out at a cost of \$2.50 per acre. The crop was cultivated one time with a vegetable cultivator.

Schlabb's grain sorghum is being produced under what might be called ideal conditions Adequate fertility is insured, plenty of water is applied, and careful farming practices are

Under such conditions, hybrids have a hard time measuring up to such longer maturing varieties as Caprock, Plainsman, Redlan, and the like. That is, if yield is the ONLY consideration.

A long growing season, which requires earlier planting, more water, and more of everything it takes to farm, should be considered. Hybrids have proved their ability to produce heavily -though possibly not quite so much as these standard varieties—in less time, requiring less water and other expense.

The second farm visited was that of Joe McWilliams, near Lariat. Here, McWilliams has been impressed with a hybrid, Texas 620, which has shown ability to produce well under extreme conditions.

McWilliams has harvested about 45 acres of the hybrid with a yield that ranged from

Impressive Record Set by Massey Family in Friona

By JUNE FLOYD

Many people have devoted a great deal of time, study, practice, and effort to setting records of different kinds. Many of them have made the headlines of the larger papers, but some of the most impressive ones have gone unrecorded and unnoticed.

Such is the record of Mr. and Mrs. Otis Massey, who live southeast of town. The Masseys are parents of ten children and every one of them is a graduate of Friona High School. The pages of any annual of the Friona school from the first one that was printed through 1950 will contain pictures of one or more of the Massey clan.

At the time Beulah Price, 1921. who was born at West Point, Two years later Gordon en- she decided to get out, so climb- of their school days. Francis started in 1930 and

for the next two years the Masseys had seven children in school. Elizabeth graduated in 1932 and Edward in 1933, then that fall Betty started. Gordon graduated in the spring of 1935

When there was not much entertainment in Friona, the Massey family provided their own amusement. In addition to amusing themselves, the group played at various neighborhood gatherings. One Sunday afternoon the entire family, including a son-in-law, went to Hereford, engaged a photographer, went to the Hereford High School, and had the above picture made. In the picture are Geneva, who could take her sheet music but not her piano, Edward, Mr. Massey, Mrs. Massey, V. M. Ferguson, Elizabeth, and Gordon in the back row. Standing in the second row, Francis, Marvin, and Betty. Russell and Stanley are seated, and Wayne is standing in the third row on the left.

Wonderful Community.

Mrs. Massey replied, "Lunch preparation was one of our biggest problems. We surely did appreciate the first cafeteria." Upon being asked about homework, she said, "Homework was never much of a problem at our house. There was always an older one or two to help the smaller

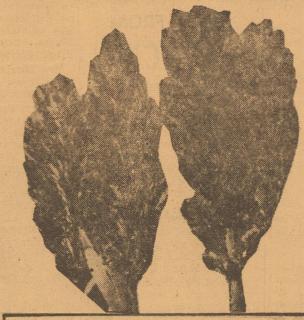

Frances and Betty played on the basketball teams which R. L. Bates, who is now superintendent of schools at Sunray, coached and took to the state tournaments several years during the forties. Betty was selected for the all-state team one

In addition to the children who have graduated from Friona High School, the Masseys have one grandson, Kenneth Ferguson, who was a member of the 1956 graduating class. His wife, the former Geraldine Phipps, is a 1957 graduate. A granddaughter, Bessie Ruth Ferguson Holt, attended school here 11 years, then married and moved to Grant, Okla., where she graduated in 1954. Other grandchildren who have attended school here are Freddie and Doris Ferguson; Delene, Tommy, Eddie, Marcella, Leon, Weldon, David, and Jearene Massey. The Masseys have seven other grandchildren. They are Stan Jr., Joyce Ann, and Ola Mae Massey of Bellflower, Calif.; Jimmy and Kathy Young of Sunnyside; Teddy Ray and Rhonda Gay Massey of Blunt D.; and Judy Lynn Massey of Friona.

Reba June and Glenna Kay Holt of Friona are the couple's only two great-grandchildren. To the original 160 acres which the Masseys bought in 1925, they have added 848 acres on which there are now four has improved a great deal in

an important crop on the High Plains of Texas. The crop was arrigated soon after the first irrigation wells were developed in the 1911-14 period. There were approximately 140 irrigation wells on the South Plains (Southern High Plains) in 1914. The first water-use studies with sorghum grain were conducted near Plainview in Hale County in 1918-19 by William L. Rockwell, a U.S. Department of Agriculture irrigation engineer, in cooperation with the Texas Land and Development Company of Plainview.

Dry weather in 1934-35 and the availability of more efficient pumps and power units stimulated further interest in irriga-South Plains increased from 300 in 1934 to 1,500 in 1938. The the area by 1945.

THE WONDROUS YEARS OF OUR TIME ...

Man's use of petroleum — of oil and natural gas — began before the first records of history.

But petroleum's full usefulness to man has been a matter of decades only.

They have been wondrous years, those decades. Years that saw automobiles built by the millions because gasoline was available as a cheap source of power. Years that saw the oceans dwindle under the high speed of great ships powered by oil. Years that saw the evolution of a more comfortable living in homes warmed by oil and natural gas. Years that saw rubber, fibers, paints and many other useful items of everyday living produced from petroleum's hydrocarbons. Years that saw the earth shrink under the wings of the airplane, and great wars decided by the availability of oil.

Thus, the oil industry has led the way into the wondrous years of our time. The industry, through foresight, ingenuity, research, and risk-taking, has found and produced the oil required in greater quantity each year, has conserved

oil for the tuture, has devised the transportation systems that move oil economically, has built the refineries and plants that convert crude oil and natural gas to the hundreds of useful products needed by a growing United States.

The Humble Company, founded in 1917, has participated in petroleum's progress during four great decades, and has pioneered in the development of many current techniques for finding, producing and refining oil. This week, with the industry, Humble invites you to consider the variety and extent of oil's progress . . . Surely no other industry has contributed more to the making of modern America.

HUMBLE OIL & REFINING COMPANY

Water Requirements

spiration by the plant is higher tion. Frequent irrigation increases evaporation. Unavoidable runoff of rainfall and irrigation water or loss by deep gation water or loss by deep normal size. An adequate and connection with fall tillage of percolation increases the water

precipitation or irrigation durplanting irrigation, adding the rainfall and irrigations applied during the season and subtracting the amount of available water in the soil at harvest. The balance is the water re quired to produce the crop.

In favorable years, such as 1949, the water requirement of high-yielding grain sorghum has been as low as 16 to 18 inches of water. In hot, dry years, such as 1953 and 1954, 24 inches of water were required to produce a maximum yield.

Water Management

Irrigation water and rainfall are equally valuable for crop production. An additional acreinch of rainfall utilized is an acre-inch of irrigation water saved for a later irrigation application. In most years rainfall provides half the water requirement of grain sorghum. The final measure of efficient water use by the crop is in the pounds of grain obtained per acre-inch of water. Since water rather than land is limited, the highest possible yield per acre, irrespec tive of water use, is not neces sarily the most profitable. The greatest return per acre-inch of water has been obtained by providing adequate amounts of vater for vigorous crop growth throughout the season to plants adequately supplied with the necessary nutrients.

Consumptive Use

Water use by the grain sorghum plant begins with germination but is comparatively low for the first 2 or 3 weeks of development, averaging from ● 0.05 to 0.10 inch per day. Irrigation should not be necessary during this time even through periods of drouth, except for sandy soils with low waterholding capacities. Daily water use through July, August and early September averages about

0.25 inch There were no rains from planting until late July in 1953. Evaporation losses from the soil surface during June and July were low and consumptive use during the early stages of crop growth was low. Record high temperatures, evaporation following irrigation and increased transpiration provided extremely high water use during the latter part of July and August despite some relief provided by rains during July 18 to 21. June and July in 1954 were similar to 1953 except that small rains
