Date Nut Cake

Two lbs. dates, 2 teaspoons baking powder, 1 teaspoon vanilla, 1 lb. cherries, 4 eggs, 1 cup sugar, 1 cup flour, 4 cups pecans, 1 teaspoon salt.

Chop dates, mix in cherries and pecans whole. Sift dry ingredients together twice. Then as sifted third time sift over fruit, nut mixture, mix. Beat egg yolks until lemon colored. Add to mixture. Beat egg whites until partly beaten, add vanilla and beat to peak stage, then fold into fruit mixture. Let stand 30 minutes. Pour in waxed paper-lined pan and cover with thicknesses of wax paper and bake at 250 degrees F. for 2 hours. During last 15 minutes of baking period remove wax paper.

CARD OF THANKS

Words cannot express my appreciation for the many acts of kindness during my illness and hospitalization in Amarillo. You will never know how deeply I appreciated the cash assistance, to say nothing of the visits, the letters, cards, flowers and every thoughtful act of my friends.

It is hoped that in some small way I can repay you; at least I want you to know that from the depths of my heart I am appreciative.

CRAG HERBICIDE-1 Replaces Geese in Berry Weeding

Growers using geese to keep strawberry beds free from weeds may soon be eating their geese if they switch to weeding with CRAG Herbicide-1.

Geese, in the strawberry bed, have always had many drawbacks; they'll take care of most of the grass-type weeds but won't touch many of the other types. They also have a tendency to go walking all over the berries. One grower, who had tried CRAG Herbicide-1 said:

"We used CRAG Herbicide-1 on about one-fourth of our two acre planting on May 15th. Geese were turned in on the remainder of the planting at the same time. Since geese will not eat many weeds such as smartweed, buck plantain, and sorrel grass, of which three weeds we have plenty, this section was quite weedy and it took the better part of two days for three of us to clean out the weeds. In the CRAG Herbicide-1 section, there were no weeds of any kind. It didn't take long for us to make up our minds.—We sold all of our geese, except seven to keep in the raspberry field, and will rely on the weed killer for our strawberries.

"I sprayed the entire planting again on July 2nd, and the only weeds to be seen now are a few missed when we hoed. As far as we are concerned, it has geese

beat by a mile."

Pretty soon grower Rennix may be eating his raspberry patch geese, too, because CRAG Herbicide-1 seems to do as good a job there as it does on strawberries. It is also being used commercially on field and sweet corn, asparagus, and gladiolus. Many state experiment station tests have shown that it also works well on a wide variety of both seeded and transplanted crops. We should be hearing more about these crops this year.

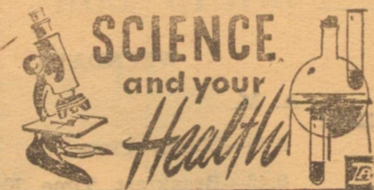

Seven Students of Parmer County Are Enrolled at WTSC

Five persons from Friona, one from Farwell, and one from Bovina are attending West Texas State College for the first term of the summer session, according to Registrar Frank H. Morgan of that institution.

Friona students are Murry D. Ford, graduate in education, Vera Ann Jones, junior English major; Mrs. Greta B. Paul, graduate in education; James L. White, senior Business Administration student; and Mona Smith, freshman.

Mrs. Frances H. Fields of Farwell is a senior education student, and Mrs. Leola D. Williams of Bovina is a graduate in education.

First term at WT closes July 10, with registration for the second term to be held July 14. Set for the second term are a Reading Conference, a Library Workshop, special education workshops, a music camp, and the Writers' Round-Up which will bring to the campus this summer such famous authors as James Street and J. Frank Dobie.

VACATIONS—AND HEALTH by Science Features

A very special health problem plagues Americans at about this time every year. It might be called "vacationitis." It is characterized by such symptoms as hay fever, sunburn, and poison ivy rash. It is one of the hazards of the annual family trek to the shore or mountains.

Vacationitis usually isn't a serious ailment. Hay fever can be avoided by getting allergy shots, sunburn by gradual exposure to the sun, and poison ivy—by staying away from the poison ivy plant.

But there are some disease-encountered a vacation-time which can be quite serious.

One of these is Rocky Mountain Spotted Fever, which, despite its name, may be found in any part of the country, particularly during the summer months. The disease is transmitted from animals to man by ticks—which means that those who go on hunting trips are especially likely to come in contact with it.

Rocky Mountain Spotted Fever can be very serious. Before the advent of the antibiotic drugs it was sometimes fatal, but since the time the death rate has dropped sharply. Cases have been reported in which patients treated with terramycin showed a disappearance of symptoms within 48 hours after the antibiotic was given.

In any event, health authorities recommend that wherever you go on vacation you determine the location of the nearest physician—just in case.

Family Reunion Honors Sons in Armed Service

A-3c Jimmie R. Gore and Pvt. Lewis D. Gore visited their parents, Mr. and Mrs. R. N. Gore, on Saturday and Sunday. Pvt. James Cross was also a guest in the Gore home.

A family reunion dinner was served Sunday honoring the guests. Present were Mr. and Mrs. Bill Hamlin of Snyder, J. D. Hamlin, John Gosnell, Mr. and Mrs. Bob Gore and sons, Eddie and Steve; Miss Shirley Coconougher, Jimmie Ray Gore, Lewis D. Gore, James Cross and the hosts, Mr. and Mrs. R. N. Gore.

We Want You to

Enjoy Your Vacation

But while the mountains or lakes promise days of carefree pleasure, what happens to your home?

A Vacant House is a Constant Temptation to Fire

YOU CAN MAKE SEVERAL PRECAUTIONS, HOWEVER, INCLUDING:

1. A THOROUGH HOUSECLEANING BEFORE YOUR TRIP, ELIMINATING FIRE HAZARDS.
2. LOCK CLOSET AND CABINET DOORS TO HELP CONFINE FIRE SHOULD IT BREAK OUT.
3. UNPLUG MOST APPLIANCES; TURN OTHERS DOWN.
4. HAVE SOMEONE MAKE REGULAR CHECK OF HOUSE AND PREMISES.

Organic Matter Keeps Our Soils Productive

This Heavy Crop of Sweet Clover Will Add Much Organic Matter to the Soil.

Big crops cannot be produced on soils with poor physical qualities, no matter how rich they may be in chemical nutrients. Roger H. Bray of Illinois in CROPS & SOILS points out that productivity and fertility are not the same. Productivity is the over-all result of many factors—good seed, favorable weather, adequate chemical nutrients and a soil which makes a good home for plant roots.

Today, since we know where to get and how to apply the fertilizer elements, we value organic matter more for physical conditioning than for chemical effects. Legumes are considered as valuable for their erosion-preventing qualities as for the nitrogen they fix. Grasses have an even better physical effect on soil and will make soil humus just as efficiently as legumes do—pound per pound of nitrogen contained, even though the nitrogen in the grass must be supplied from a fertilizer bag.

In either case, it is not the amount of organic matter turned under, but the nitrogen balance of the whole cropping system which determines whether crop organic matter will maintain soil humus.

No matter how many legumes you grow or how much nitrated grass you turn under, it will not result in either maintenance or build-up of soil humus of normal quality unless the nitrogen bal-

ance is positive. Positive nitrogen balance means that the input of nitrogen from legumes, fertilizer and farm manure must exceed the outgo of nitrogen in crops removed.

"We are gradually piecing together the picture of what organic matter is, how it is formed, and how it functions as the 'life of the soil.'"

We must grow crops for organic matter and turn them under to build up and maintain soil humus because (1) roots of sod crops, while growing, help to open up the soil and start the physical conditioning process; (2) crop residues, when turned under, loosen the soil and, in decomposing, improve its physical properties; (3) humus is produced from organic matter by decomposition, provided the organic matter contains enough nitrogen; and (4) soil organic matter is the natural storehouse of plant food in the soil.

A good organic matter program, therefore, is one which gives maximum crop yields by building up the supply of nutrients to the level required and then maintaining that level. It is one where green manure crops, high in nitrogen, and crop residues are plowed down to re-create the humus decomposed each year. Above all, it is one where the nitrogen balance is at least slightly on the positive side so that the organic matter goes to build humus.

HIGHLIGHTS -

(Continued from page 2)

Not any time recently has there been so much political maneuvering early.

The elections are a year away, but three factions are already preparing for the struggle, and individual candidates are going through the usual routine of speechmaking and handshaking.

—tpa—

Paying a visit to the state was Stephen A. Mitchell, Democratic National Chairman, who said he would invite Adlai Stevenson to come here later.

Mitchell asked party members who supported Eisenhower to return to the Democratic fold, and predicted Democratic victories next year.

He forecast that "Sam Rayburn will return to the speakership of the House, and Lyndon Johnson will be majority leader, not minority leader."

—tpa—

But there was evidence that the rift between Eisenhower and Stevenson Democrats was still there.

When the Texas Federation of Labor convened at El Paso, delegates booed when a speaker charged that Governors Shivers of Texas, Thornton of Colorado, and Mechem of New Mexico were "state's righters last year when it was a matter of dough in the pocket, but this year, when it's a matter of drought relief, they're quite willing to be Americans and accept relief from the central government."

Shivers led the Democratic revolt that gave the state to Eisenhower last year. Labor leadership generally was for Stevenson.

Could Mitchell and the other party leaders pull Texas back into line?

It was obvious that they were going to work hard to reach that goal.

And it was equally clear that the Republicans were going to fight them every inch of the way. They hoped to make outright party members of the Democrats who voted for Eisenhower, and they planned to put up candidates for every elective office.

It was easy to make one prediction: the Texas political battles of next year are going to be big and bitter.

—tpa—

If Governor Shivers had party politics on his mind he didn't say so in his speech to the state bar convention in Fort Worth.

His remarks concerned liberty on the national and international level.

Americans, he said, "are the best in the world at selling soap and television sets, and we've got to sell liberty like we sell soap."

Shivers added: "We haven't sold liberty at home or abroad. We tried to buy it abroad, but this hasn't worked and it never will."

The political experts were bound to make their interpretations of the speech.

Did it mean that Shivers would run for a national office next year?

The governor has said that he might make the race for a third term as the state's chief executive.

But then, again, he might not. Your guess is as good as any: if Shivers has decided what he is going to do, he has confided in no one.

On all these points of comparison...
Chevrolet's
farther ahead
than ever!

... IN NEW AND ADVANCED STYLING—The new long, low, sleek lines of the 1953 Chevrolet set new standards of beauty in the low-price field. Here you will see careful detailing and a richness of appointments always before found only in much costlier cars.

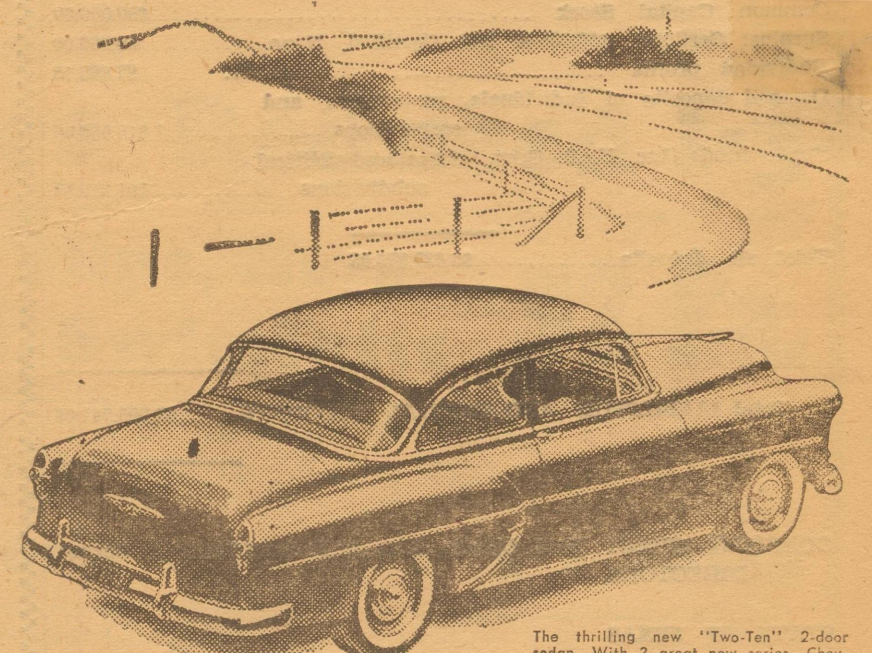

... IN HIGH-POWERED PERFORMANCE—The most powerful engine in the low-price field! The entirely new 115-h.p. "Blue-Flame" engine in combination with new Powerglide* brings you new high-compression power and a wonderful gain in economy, too. In gearshift models you will find the advanced high-compression 108-h.p. "Thrifty-King" engine.

... IN SMOOTH, SIMPLE AUTOMATIC DRIVING—Expect faster getaway with Powerglide's new automatic starting and passing gear . . . and new economy, too. Chevrolet's new Power Steering* takes over 80 per cent of the work of steering, makes parking unbelievably easy.

... IN ECONOMY AND VALUE—Now, you'll get many more miles out of every gallon of gasoline. You'll save on over-all operation and upkeep, too. Yet Chevrolet remains the lowest-priced line in the low-price field.

... IN AMERICA'S FAVOR—Again this year—as in every single postwar year—more people are buying Chevrolets than any other car. In fact, latest official registration figures show that Chevrolet is over 25% ahead of the second-place car. Nearly 2 million more people now drive Chevrolets than any other make.

*Optional at extra cost. Combination of Powerglide automatic transmission and 115-h.p. "Blue-Flame" engine available on "Two-Ten" and Bel Air models only. Power Steering available on all models.

The thrilling new "Two-Ten" 2-door sedan. With 3 great new styles, Chevrolet offers the widest choice of models in its field.

MORE PEOPLE BUY CHEVROLETS THAN ANY OTHER CAR!

Potato Harvest and Processing Starts Wednesday; Outlook Good

Neff Company Represents \$50,000 Investment

the area to assist in harvesting and shipping.

Harvest is estimated to last for about three weeks here, with 40 to 50 laborers employed at the sheds that will operate around the clock during peak season.

The Neff sheds were constructed here this year; the new material and machinery represents over a \$50,000 investment.

The Friona potatoes will be sacked under the brand name "Lamona" carrying the Herman Neff Company, Friona, signature. The potatoes will be sold on local markets as well as shipped to northern and eastern points.

Potato price in the Hereford area yesterday was \$3, and the local growers are optimistic about the price and yields here.

Observers have noted that the local yields and quality both are above average, far above the reports circulated about other potatoes of the area. It seems that insect preventative moves were applied here at the correct time, this being one of the main factors in the good production here. Also, most local growers are leaving their potatoes in the ground longer than in some other areas to insure a fully-developed potato.

Next week we shall see "full speed ahead" in the harvesting of Parmer County's newest commercially grown crop, an industry that many predict will catch on rapidly.

Mr. and Mrs. A. E. Bainum of Clovis were week-end visitors in Clovis were week-end visitors in the C. S. Bainum and Mack Bainum homes.

Cayce and Harris Dunn spent the week-end fishing at Conchos Dam. Cayce reported good luck fishing, bringing back the limit in catfish and pike.

STORK FEATHERS

Mr. and Mrs. D. L. Carver of Bovina are the parents of a new boy born June 28. He weighed 7 lb. 5 oz. and has been named Dennis Leon.

Born July 3 to Mr. and Mrs. Doyle Elliott a boy. He has been named Byron Doyle.

Mr. and Mrs. C. B. Harvey are the parents of a baby girl born July 6.

Mrs. Mary Bainum is recovering here after her recent hospitalization resulting from a stroke.

The J. H. O'Rears of Amarillo, Miss Mary Reeve of Pampa, and the Glenn Reeve family ate picnic supper with the parental F. W. Reeve home here July 4th, after which they went to Hereford to view the fireworks display.

Mr. and Mrs. Roy Jones of Waco

Miracle Leather Developed

Keeping your feet dry in winter's slush, without burdening yourself with rubbers and galoshes, should be easy soon, as a result of new research developments disclosed by Leather Industries of America.

Leather is used universally as a shoe material because its fibrous construction permits feet to "breathe," that is evaporate foot moisture. Now, American tanners, teamed up with chemists, have produced leather that allows moisture to be evaporated from inside the shoe, but completely blocks moisture from entering through the outside.

This leather, now being tanned in experimental batches, can be used not only in shoes, but also in other articles, such as gloves and garments, where both porosity and weather-proofing are important.

Another chemical processing treatment, involving "polymerization" or resin penetration of hides, is producing leather that is tougher and more scuff-resistant than ever before, while retaining the flexibility and appearance of genuine leather.

"Polymerized" leather is making possible articles such as luggage, handbags, upholstery and decorative leathers which can withstand abnormal wear and abuse and still retain their "just new" look.

spent the week-end visiting in the Henry Lewis home. Mr. Jones is a brother of Mrs. Lewis. **STAR ADS GET RESULTS**

Herman Neff Co. Sacks Carry 'Lamona' Brand, Friona Address

First potatoes of the 1953 season in the Friona area are expected to be harvested next Wednesday, with the Herman Neff Company commencing its harvest-

ing and processing operations on that date.

The W. H. Long potatoes will be first harvested, Neff believed in a conversation this morning.

Long raised 20 acres on his farm near Hub.

Then the fields of Ross Terry, Ed Walters, Gordon Massey and W. L. Edelman should follow in short order, with continuous harvest on all other fields until harvest is completed.

The Neff firm will conduct the harvesting operations on all the 750 acres seeded in the area. The firm has bought two harvesters and has leased ten trucks for the hauling. Mexicans already are in

Black and White

SILHOUETTE BLACK and white make these separates a day and night combination. Satin quilted skirt whirling in wide circles, sheer batiste blouse and sleeveless velveteen halter may be worn together, or skirt and blouse for office and skirt and halter for dates. By Fashion Frocks of Cincinnati.

FOR COLD COMBAT

This serviceman's cotton uniform designed for cold climates makes use of the layer principle of warmth without excessive weight. Instead of a bulky, heavy uniform for cold weather, this naval seaman is outfitted with many light layers of clothing to trap insulating air. One advantage of this type uniform is that men doing strenuous work can shed layers as bodily heat increases while men at stationary posts can add articles of clothing for warmth.
