## Texas Egg Law Will Be Effective August 22

The Texas Egg Law, which becomes effective Aug. 22, may be "just what the doctor ordered" to assure Texas consumers that high quality eggs are being placed on the market for sale.

The effect of the law will not only be felt by consumers, but by producers and other businessmen as well, according to F. Z. Beanblossom, extension poultry marketing specialist.

This law, says Beanblossom, provides primarily for inspection and careful labeling of all eggs that are to be sold on grade. The eggs are inspected primarily at retail outlets and if sold on grade are labeled according to size and quality. Ungraded eggs must be so labeled.

It shall also be unlawful to sell or advertise shell eggs below the quality of Grade A as "fresh", "selected", "cage", "infertile", "new-laid", or other words of similar import.

Producers of eggs who sell only the production of their own flock are exempt from the law unless they sell on the basis of grade, then their eggs must meet the standards specified by the law.

The deadline for obtaining licenses by dealers, retailers, wholesalers, brokers and processors is Oct. 20. There is no fee to any retailer, as defined by the law—that is, any person selling or offering for sale, eggs to consumers only in this state.

Actual enforcement of the new law will start Feb. 17, 1958.

## BAYOU PHILOSOPHER OFFERS HIMSELF IN EXPERIMENT TO PROVE MAN CAN STAND UP TO THE RIGORS OF SPACE FLIGHT TRAVELS

Editor's note: The Bayou Philosopher on his Johnson grass farm on the Bayou discusses, of all things, space flight this week. It's hard to tell what conclusions he arrives at.

Dear editor:

Among a lot of things I never expect to take any active part in is a flight through space.

If anybody else wants to, it's all right with me, just as I have no objection to a man trying to run a mile in four minutes, so long as it's him trying it and not me, but a problem has come up in space flight that has the scientists worried and I don't mind giving them the benefit of my experience.

According to an article I read last night in a copy of a newspaper an insurance salesman left here about mid-afternoon while he was trying to beat my dog to his car, scientists are now worrying over what will happen to the mind of a man sailing effortlessly through space. In case you're wondering the salesman won.

As I understand it, when man breaks loose from the pull of gravity and heads out into space, he becomes weightless, and the experts are afraid he can't stand the sensation of doing absolutely nothing while his rocket ship glides noiselessly through the silent reaches

He was a member of the Primitive Baptist Church here.

### W. T. Cox Sells Residence Here to Mrs. Bill Pope

A deal was consummated here this week in which W. T. Cox sold his residence on West 10th Street, across the street from the Baptist parsonage, to Mrs. Bill Pope.

es of outer space. "Space fliers, cut off from all contact, may suffer a mental breakdown in a few hours," the experts said, and suggested an attempt should be made to "design a system in which the human operators are constantly occupied with meaningful and significant tasks."

I would like to inform these experts I'm way ahead of em. I have already explored this phase of space flight, and I can report they have nothing to worry about. The idea that a man has to have some significant tasks all the time to help him keep his balance, will not stand the searchlight of true scientific experimentation, as carried out by me on my farm out here.

In fact, it's just the other way around. The men who break down are the ones who are constantly occupied with meaningful tasks, and to prove space flights will be safe from a mental standpoint, I'll be glad to submit myself to dangerous test. If the experts will put me on their payroll, I'll be glad to stretch out under a tree and prove to them the human mind can stand the fearful prospect of doing absolutely nothing for hours at a time. I've been in training for this job for years, and will be glad to have my success crowned with scientific recognition.

Yours faithfully,  
J. A.

### About Your Health . . .

Austin—Summer-time is barefoot-time. One of the joys of summer vacations for small boys—and girls too—is to be able to go about their business sans shoes.

What adult can say that he found no pleasure in mud oozing between his toes or the coarse grass tickling his toes?

However, shoes are basically a protective item of clothing, and when they are not worn, the protection is removed. For that reason each summer the incidence of foot injuries to children goes up.

These injuries are varied, but usually they are abrasions, cuts or punctures.

Prompt action and a hurried trip to the doctor or first aid kit is usually all that is required to set things right.

But oftentimes there is a hidden spectre waiting to complicate what may appear to be a simple little glass cut or nail puncture. This spectre is tetanus, commonly called lockjaw.

Lockjaw is an acute disease of the nervous system caused by poisons from wounds infected with tetanus bacteria. These organisms are found in the soil, especially in the feces of domesticated animals.

Contrary to popular belief, tetanus is not restricted to farm areas. Any domesticated animal, including cats and dogs, are capable of carrying the organisms.

The tetanus bacteria cannot survive well in open air, but thrives in closed wounds, which they enter through breaks in the skin, establishing themselves in dirty wounds resulting from all sorts of accidents from highway accidents to the most trivial penetrating wound.

The incubation period ranges from

## Cottonwood 4-H Club to Meet Friday, August 12

By Eddie Albrecht

The Cottonwood 4-H Club will hold its regular monthly meeting at the Cottonwood Community Center Monday evening, Aug. 12, at 7:00 p.m.

It was agreed at the last meeting that each person bring weiners for a weiner roast. All members are urged to attend.

Two to 50 days after contact with the germ. The first signs are often stiffness in the neck and jaw, sometimes preceded by chills, fever and stiffness of the muscles near the original wound.

In time, if left unchecked, tetanus causes severe spasms involving the entire body and may result in death.

Fortunately serious damage from the infection may be avoided through immunization with tetanus toxoid and should be included in the routine vaccinations of children, with an occasional "booster" to insure immunity.

Barefoot-time is happy time if your child is protected, but if he should suffer a foot injury from a cut or puncture, take him to the physician. It may be worth his life.
