Mass Ex-Ray Sur- vey Of Co. To Start Sept. 30

Several members of Silvertown
Lions Club and P. T. A. and quiet
a few members of the Quitaque
Lions Club and P. T. A. met in
the high school auditorium Wed-
nesday morning, August 9, at 10
o'clock to hear plans discussed
for the T. B. Mass Ex-Ray of
Briscoe County by members of
the state board of health.

On September 30 and October
2, we are to have in Silvertown
an Ex-Ray unit from the State Board
of Health, to ex-ray the chest of
every person in the county over
fifteen years of age.

This is for one reason only, to
catch T. B. in its early stages. If
the people can be educated in the
prevention of T. B. through early
diagnosis, then it is believed it
can be whipped the nation over.

As for facilities to handle T. B.,
this state is much better equipped
than ever before. Previous to now
a patient could only remain in a
state T. B. hospital for 9 months.
Now he may remain for years if
his doctor so advises.

Few people know that T. B. is
our largest killer of all commu-
nicable diseases. Forty-five to
fifty-seven thousand people die of
T. B. in the United States every
year that wouldn't have died if
caught in time.

It is believed by many that in
this part of the country that T. B.
is not present. But in the state
survey last year, the same rate of
chest abnormalities, three to five
out of every one hundred, were
present in this part of the country
as in the Gulf Coast counties.

The chest ex-ray is valuable to
the individual for another reason.
It will show up other abnormali-
ties in the chest such as lung
cancer, tumors, etc.

The big problem before the
State Board of Health and your
county health officer is to get
every person to have the ex-ray.
For every child who has T. B.
there has been an adult T. B.
germ carrier before him. This is
the source and starting point from
which health authorities are be-
ginning to work.

No person regardless of social
status, race, color or creed is im-
mune. It is also free to everyone.
However, it is not charity as it
is paid for by taxes.

Your State Board of Health and
your family doctor urges you to
have this chest ex-ray.

MRS. ALBERT MALLOW,
Publicity Chairman.

Seaney Hardware Will Use Building Vacated by Mason

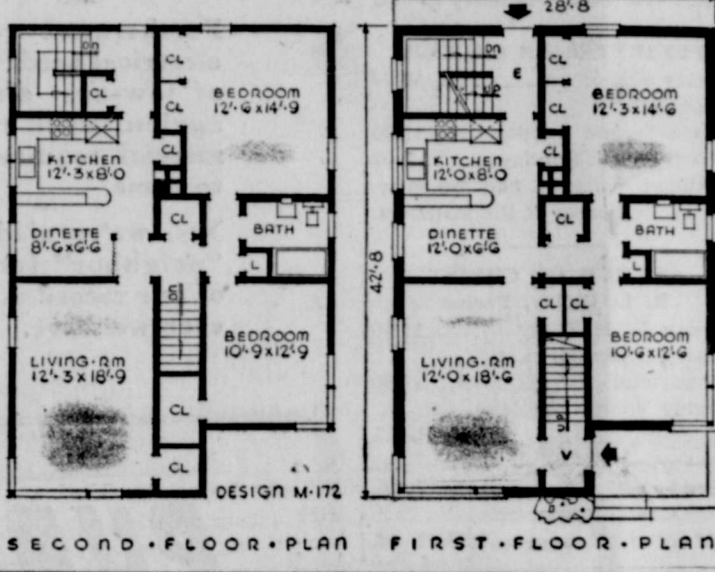

Seaney Hardware and Appliance
Company have secured the build-
ing just west of their present lo-
cation recently vacated by Mike
Mason to give them more room for
their stock of merchandise. They
have been crowded for space, and
this additional building will give
them plenty of room to show their
merchandise.

Mr. and Mrs. Seaney plan as
soon as they have finished work
on the building and their stock is
arranged, to hold open-house
and invite the public to visit their
store. The date will be announced
later.

E. A. BELLINGER IN
ROCHESTER THIS WEEK

E. A. Bellinger, owner of Bel-
linger Department Store, left Fri-
day for Rochester, where he will
have a re-check at the clinic. Mr.
Bellinger underwent a major op-
eration at the clinic last fall, and
has improved satisfactory since
his return. He was due to go
back for a check-up in six months.

A HOME TO LIVE IN

SMALL HOUSE PLANNING
BUREAU ST. CLOUD,
MINNESOTA

DESIGN M 172. Each apart-
ment of this duplex consists of
four rooms; two bedrooms, living
room, and combination kitchen-
dinettes. A single front entrance
opens into a common vestibule
and the rear entry leads to kitchen,
second floor apartment and
basement.

An abundance of closets for all
purposes is provided, including
coats, linen and general storage.
There are 7 closets on the 1st
floor and 8 on the 2nd floor.

Plans call for frame construc-
tion with brick veneer on the 1st
story and wide siding above, hip
roof and asphalt shingles.

Overall dimensions are 28 feet
8 inches by 42 feet 8 inches. The
floor area is 1157 square feet and
31,239 cubic feet.

For further information about
working drawings, see your local
lumberman.

Donald Weast Funeral To Be Held Friday

Funeral services for Donald Dee
Weast, age 22, will be held Fri-
day, August 11, 1950, at 2 p. m. at
the high school auditorium, con-
ducted by Earl I. Cantwell. In-
terment will be made in the Sil-
vertown Cemetery under the direc-
tion of Douglas Funeral Home.

Donald was carried to Tulia
Hospital Monday afternoon and
underwent an operation about six
o'clock. He passed away Wednes-
day morning, August 9, 1950 at
3:30 a. m. He suffered from an
acute case of appendicitis.

He was born in Briscoe County
May 19, 1928, the son of Mr. and
Mrs. W. N. Weast. He attended
school in Silvertown and graduated
here. He married Eloise Tunnell
and they lived in Silvertown, and
part of the time he farmed. Dur-
ing the past winter he was em-
ployed at Coffee Implement Com-
pany.

Donald is survived by his wife,
his parents, Mr. and Mrs. W. N.
Weast, three sisters, Mrs. Kenneth
Jones, of Lamesa; Mrs. Bill Smith,
of Gainesville, Florida and Mrs.
Doc Wallace, Silvertown.

M. D. Orr Opens Law Office in Silvertown

M. D. Orr, a recent addition to
our community opened his law
office in the rear of King's Barber
Shop.

Mr. Orr, a native of Blanco
County, was reared on a ranch
between San Antonio and Blanco,
Texas. He attended the Universi-
ty of Texas, and served in the U.
S. Air Corps during the war. Mr.
Orr is a single man.

UNDERWENT OPERATION AT CANYON

Offie Wallace underwent a
major operation Monday after-
noon in Canyon Hospital. Mr.
Wallace's condition is reported to
be satisfactory.

Mr. and Mrs. Norian Dudley
left Friday for Colorado on a
vacation trip.

"Davy Crockett, Indian Scout" at Palace Theatre

"Davy Crockett, Indian Scout"
showing at Palace Theatre on
Sunday and Monday, August 13,
14, with George Montgomery, El-
len Drew, Phillip Reed, Noah
Beery, Jr., Paul Guilfoyle, Addi-
son Richards, Robert Barret.

When a wagon train headed
west with a cavalry escort and
under the guidance of George
Montgomery, Indian scout, is at-
tacked by hostile redskins, it be-
comes apparent that there is a
spy in the party. Suspect is Phil-
lip Reed, Montgomery's assistant.
It develops, however, that Ellen
Drew, a school teacher and as-
sumed to be white, is in reality a
half-breed Indian giving infor-
mation to her father, the chief who
has been inciting the tribes to
warfare. She falls in love with
Reed, at the same time discover-
ing that her father is using the
redskins to further his own in-
terests. Returning to the whites,
she and Reed save the train from
massacre, are pardoned and ride
off into the sunset, man and wife.

Next week's program appears
on page two.

Visitors in T. J. Fuller Home This Week

Mr. and Mrs. T. J. Fuller have
as their guests this week their
daughters and grand children,
Mrs. H. E. Hansen and daughter,
Jacquelyn, of Houston, Texas; and
Mrs. M. W. Lee and son, Michael
Weldon, of San Angelo, Texas.

Mr. and Mrs. W. G. Byrd left
Wednesday for Ekota, Texas,
where they will visit Mr. Byrd's
aunts, Mrs. Vickers and Mrs.
Trent.

Mobilization Ex- plained To Draft Clerks at Meeting

Highway Department Authorizes Funds for Second Bridge

According to information re-
ceived by Judge G. C. Tubbs from
the State Highway Department,
the Highway Commission has au-
thorized the State Highway En-
gineer to proceed with the con-
struction of a bridge over Los
Linguis creek in the northeast
edge of Floyd County at an esti-
mated cost of \$37,000. This autho-
rization for the bridge is in ad-
dition to work previously autho-
rized by the state department
which includes 2.7 miles of pav-
ing and a bridge over Quitaque
Creek on the same road. The
State is to assume the cost of both
bridges, according to the under-
standing here.

The bridges will be built of
re-inforced concrete, the infor-
mant said. They will have a
roadway width of 21 feet and will
be strong enough to withstand the
flood waters of the two creeks.
Recent heavy rains in that area
damaged the bridges on the road.

The 2.7 miles of paving will
connect with four miles of paving
in Briscoe County running into
Quitaque.

Missionary Program For Monday, August 14

The Missionary program for
Monday, August 14, will be given
in the auditorium of the First Baptist
Church at 3 o'clock, Vada
Waldrom Circle leading the pro-
gram and Mrs. Bud McMinn in the
chair.

Subject—Are you on a diet?
Song—Lift Him Up.
Devotional—Mrs. L. K. Gilkey-
son.

Solo—Break Thou the Bread of
Life, Mrs. Sam Brown.
Are You Reducing—Mrs. Bud
McMinn.

Duet—Mrs. O. C. Allard, Mrs.
A. A. Howard.
Are You Suffering From Acidi-
dosis? Mrs. R. C. Bomar.

Are You An Anemic—Mrs. W. E.
Stodghill.
Hymn—Make Me a Channel of
Blessing—Congregation.

Are You Suffering From a
Heart Disease?—Mrs. Jim Bomar.
Duet—To the Work to the Work
—Mrs. J. M. Thompson and Mrs.
H. P. Howard.

Local School Board Will Meet Monday Night, August 14

A meeting of the local school
board is scheduled for Monday,
August 14, and at this time the
architect will meet with the board
and present final plans of the ad-
ditional class rooms which are to
be built by the school.

It has been learned that plans
and specifications for the new
lunch room and remodeling speci-
fications for the present lunch
room which is to be re-arranged
for a home economics room will
be ready soon, and will be pre-
sented to local builders for bids
on the work.

MRS. JOE WHITTEL DIES AT OZONA, TEXAS

Mrs. Joe Whittle, of Ozona,
passed away Tuesday, August 8,
relatives were advised here. Mrs.
Whittle is the sister of John
Haynes, and an aunt of Mrs. C. E.
Anderson. She was a former
resident of Silvertown.

Mr. and Mrs. C. E. Anderson
and family left last Friday on a
two weeks vacation trip to Colo-
rado and other points of interest.

FULL MANPOWER CONTROL WOULD CALL "EVERYBODY"

West Texas draft board clerks
were given a very clear picture
of what all-out mobilization ac-
tually is by a selective service of-
ficial at the week end meeting of
draft board clerks from this area
in Lubbock.

According to Lt. Col. Morris
Schwartz of Austin, deputy state
director of the selective service,
plans are being shaped that would
call for the services of "every-
body."

"Word War III would be a
battle of survival for the United
States," he said, "and the demand
for manpower would be all-out."
Under the plans being shaped,
all men from 18 to 45 would be
liable for duty in the armed
forces.

Women would be drafted.
"The 4-F, the man rejected in
the last war because of some phys-
ical disability and who often
skipped from job to job and felt
no responsibility, will be made
available for agricultural or in-
dustrial duty," Colonel Schwartz
said.

"It will be a work-or-fight deal
for all," he added.

More than 60 clerks, including
Mrs. Frances Starkey, clerk of the
local board, attended the two-day
meeting in Lubbock.

It was also pointed out by Mrs.
Starkey that the plan related by
the selective service official likely
would order the suspension of
"non-essential" business.

No breakdown on what busi-
ness was or was not essential was
given.

Also explained at the meeting
was the decentralization program
of the state selective service sys-
tem that would increase the num-
ber of boards, from 137 to 438,
giving each county at least one
local board.

Under the decentralization plan,
which will not be put into effect
unless the President declares a
national emergency or the con-
gress makes a declaration of war,
the present Childress board would
be broken up into five boards
with one in each of the counties
now served by the Childress
office.

The seriousness with which the
selective service officials are con-
sidering the draft proposition was
most evident in the trend of all
talks and consultations at the
Lubbock conference, Mrs. Starkey
pointed out.

They feel the actuality of the
"all-out manpower controls" is
something that the people can look
forward to, Mrs. Starkey said.

Victor Fogerson Gets Extra Pay for Selling Amarillo News

Victor Fogerson, son of Mr. and
Mrs. Ware Fogerson, is not only
making money out of his Amarillo
Daily News route in Silvertown, but
he is getting a lot of nice gifts
from the News for the business he
has built up in subscriptions the
past three weeks.

Among the nice gifts he received
from the Amarillo Daily News
were: Soft ball, hard ball, hard
ball bat, baseball glove, paper
basket for the bike, flash camera
with 18 rolls of films, rod and
reel, and three T shirts with
"Amarillo Daily News" printed
on them.

For a beginner of only three
weeks with his paper route we
think Victor is tops as a "busi-
ness man."

Visitors in the home of Mr. and
Mrs. Clyde Wright last Sunday
were Mrs. Wright's sister and hus-
band, Mr. and Mrs. Harry R.
Seed, of Hereford.

WHERE ARE WE GOING ?

If you don't know where you're going or have any ideas about where your town may be going, you're like the man who was "ridin' in to ride out." There was a character, back in the horse and buggy days, who typified this attitude. It was too wet to plow, and although his house was a ramshackle affair, this man could think of nothing that needed to be done at home, so he piled into his buggy and "rode out to ride in"—going nowhere.

The editor of the Newcastle Register, who met this man in those days, says (and truly so) "There are many towns just like that—'just ridin' in to ride out,' saying there isn't anything to do."

"If the vehicle your town uses to get somewhere is a worn-out, old-fashioned, ramshackle, dilapidated, patched-up affair, with a spavined, buck-kneed, stringhalted, means of locomotion, the thing to do is wake up to modern ways of doing things. Give Your ideas and ways of doing things a shove, shampoo and haircut. By so doing others will do likewise and then, and only then will you get some place."

Where is YOUR city going? Is your front yard and back yard neck deep in weeds? Is your house an old ramshackle affair that needs repair and paint? Is your water and sewer system adequate, or are you 'just ridin' in to ride out'?

Mr. Editor says, "It must be going some place—ahead or backward. If it is 'just ridin' in to ride out,' it's still standing still, which is going back, and soon stagnation will set in, even worse than complete annihilation." — West Texas Today.

Community Sanitation Important in Preventing Disease

In addition to the general instructions for community sanitation which are important in preventing poliomyelitis, Dr. Geo. W. Cox, state health officer, today issued an urgent warning to every individual in Texas to practice strict personal hygiene to protect his own health and that of those about him.

"Of course, cleanliness and personal hygiene are ordinarily taken for granted," Dr. Cox said, "but at this time with the incidence of poliomyelitis having reached a total of 1395 cases, I would like to re-emphasize some personal sanitary measures which may help in preventing the spread of this crippling and often fatal disease."

The state health officer stressed the importance of scrupulous cleanliness of the person. Frequent bathing and immaculately clean clothing are vitally necessary. Oral hygiene with thorough brushing of the teeth and the use of amild antiseptic are recommended. The passages should be kept clean and dental defects corrected immediately.

Paratrooper Sets Record With 107 Drops in One Day

FAYETTEVILLE, N. C.—A former paratrooper from Dillon, Mont., has set a world's record for parachute leaps in a single day by making 107 drops.

Averaging better than one jump every 6 minutes and exhausting seven pilots, Sgt. John W. Swetich, broke the record with his 106th jump 10 hours to the minute after his first leap.

He successfully topped the official record of 75 leaps by a Yugoslav in London and the unofficial record of 105 leaps claimed by Juan Iriarte of Buenos Aires.

He made his leaps into a plowed field. He wore a sweat shirt and regulation paratroop trousers, boots, and helmet. He taped his arms where the chute straps bound him. After each jump, a jeep and a pickup truck met him. The jeep rushed him back to the Piper Cub plane which took him aloft again, while the truck took his chutes to the hangar where six men were kept busy repacking them.

His only complaint at the start was, "If I can survive those jeep rides, I'll be O. K."

Swetich twisted his ankle and sprained his knee on the 51st jump, and slowed down long enough to have his right leg taped. After the 99th jump his aides, all buddies from the 82nd Airborne Division, decided he should jump from 900 feet instead of 700 because his reactions were slower. From 900 feet he would have time to use his emergency parachute if necessary.

He took only two 5-minute breaks throughout the grind, and ate only a milk shake with three eggs in it and a few candy bars.

110-Year-Old Maryland Woman Registers to Vote

BALTIMORE, Md.—A registrar at the office of the board of supervisors of elections was so startled he had to ask the lady her age a second time.

"One hundred ten," answered Mrs. Annie Ross without batting an eye.

She went on to explain she was born in slavery on Maryland's east shore during the term of President Van Buren. This was the first time she had registered to vote because "nobody influenced me before."

She said she owed her good health to "a little gin now and then."

Nephew of King Sells Estate to Pay Taxes

LEEDS, England—Nobility throughout the world has been having a tough time of it for a number of years, for the most part finding themselves without people to rule.

In England, however, it is a little different. English nobility is finding it difficult to pay taxes. The latest example is the Earl of Harewood, nephew of King George, who has been forced to sell a third of his ancestral estates at auction to pay inheritance taxes.

Most of the happy buyers were his old tenants—farmers and tradespeople. A total of 7,000 of his 22,000 acres were sold to pay the taxes, amounting to approximately \$2,196,480.

The Earl told his tenants he would like to have them bid in the homes and fields they had rented.

Mrs. Annie Mary Ridsale, 83, bought the cottage she had lived in 49 years. When it was knocked down to her for \$588, she said, "I am so happy I could walk home the 10 miles to Leeds."

The post office, with 6½ acres, went for \$7,420 and the shoemaker bought his shop for \$168.

One tenant paid \$33,880 for two farms his family had worked on or around for 300 years.

Single farms brought as much as \$23,100 for 175 acres and a house. Two others were withdrawn from sale because bids were too low. A King George III period stone house dating from American Revolutionary times brought \$5,880.

Old-Fashioned Coal Oil Aviation Fuel of Future

NEW YORK—Alexander Ogston, member of the aviation department of a large petroleum company, believes that kerosene, the old-fashioned coal oil that grandmother used in her wick lamp and still used in many farm stoves, is the fuel of the future airplane.

Ogston said that while the conventional type of airplane engines would be built at least 10 years, eventually air liners will be jet propelled. He believes kerosene will fulfill the needs of a safe and economic fuel.

"There is little doubt that a fuel of the general characteristics of kerosene comes closer to satisfying the requirements than any other," he says.

He admitted that there have been some "severe fires" following the crash of a jet fighter plane, using kerosene, but that such crashes have been where the aircraft has hit the ground at high speed, causing complete disintegration of the structure.

Ogston said research was now under way to find means to protect kerosene from freezing at extremely low temperatures. That will be necessary if military planes using kerosene are to operate in the arctic regions.

AGRICULTURAL FILLERS

In most sections of Texas, there are from 60 to 90 days of good growing weather during the fall growing season and that is sufficient to grow a good fall garden. The garden will help whip high food prices.

Frozen black eye or other peas require only about one-half as much cooking time as do fresh peas.

Sanitation is a very important factor in the control of distases and parasites in the turkey flock. The lack of sanitation can wipe out all expected profits from the flock.

A thin magazine folded in half and placed over the lower round of the wire clothes hanger will prevent the creasing of trousers where they are folded over the hanger. Paper clips can be used to hold the magazine in place.

To keep loaf cake from drying out, cut slices from the center as needed and then put the halves together again.

Good Citizenship and Public Service . . . the keystones upon which your Public Service Company was founded 26 years ago this month.

Through the years it has been our constant aim to keep good citizenship and public service our goal in our association with friends and customers.

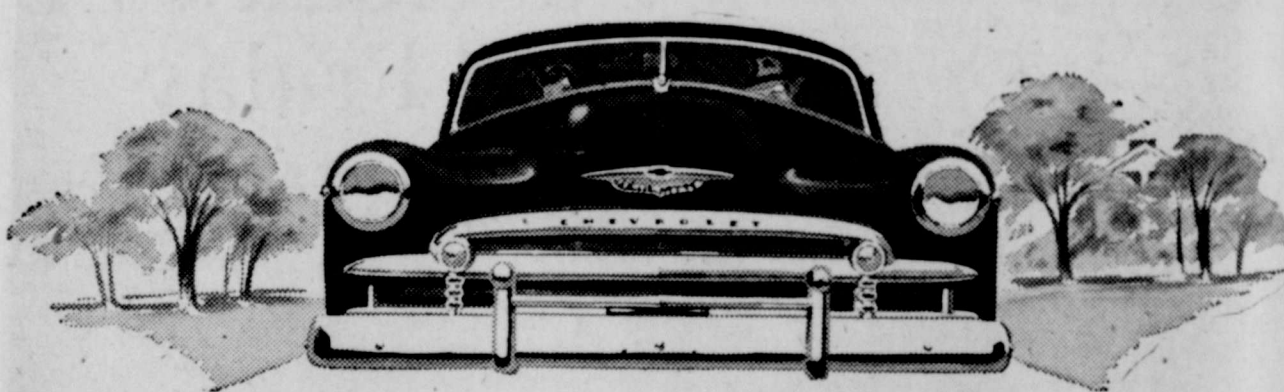

In the future—just as in the past 25 years—we'll remain a part of the communities we serve . . . do our share to assist in the continued growth and prosperity of the vast Panhandle-Plains-Pecos Valley-Eastern New Mexico area.

Furthermore we're keeping ahead of the rapidly-expanding electrical needs of this region . . . so that a dependable supply of low-cost electricity awaits the agricultural, residential and commercial requirements that are sure to come.

Yes, we're glad to have been your "neighbor" for 25 years . . . proud of our record as a good citizen wherever we serve.

SOUTHWESTERN PUBLIC SERVICE COMPANY
26 YEARS OF GOOD CITIZENSHIP AND PUBLIC SERVICE

Only Chevrolet offers such a wide and wonderful choice . . . and at the lowest prices, too!

- You can choose between Styleline and Fleetline styling
 - You can choose between Automatic and Standard Drive
 - You can choose between the Bel Air and the Convertible
- Many an admiring glance will follow you when you roll by in your new Chevrolet with Body by Fisher. That's true whether you choose a Chevrolet Styleline model, with "notch back" styling, as the designers call it, or a Chevrolet Fleetline model, with "fast back" styling. Both are available on all Chevrolet sedans and at the same prices! Remember—Chevrolet is the only low-priced car that offers these two outstandingly beautiful types of styling . . . thus giving you an opportunity to express your own individual taste in motor car beauty.
- You have an enviable choice of engines and drives in Chevrolet, too. You can buy a Chevrolet combining Powerglide Automatic Transmission* and 105-h.p. Valve-in-Head Engine for the finest no-shift driving at lowest cost, or a Chevrolet combining the highly improved standard Chevrolet Valve-in-Head Engine and Silent Synchro-Mesh Transmission for the finest standard driving at lowest cost.
- *Combination of Powerglide Automatic Transmission and 105-h.p. Engine optional on De Luxe models at extra cost.
- And if it's a sports model you want here's your car! Choose the sleek, fashionable, steel-topped Bel Air, with smart, racy lines, extra-wide windows and gray, leather-trimmed upholstery, and you'll have the only car of its kind in the low-price field. Or choose the equally beautiful Chevrolet Convertible, with automatic top that lifts or lowers at the touch of a button, and you'll have the finest Convertible in its price range. Also available is an all-steel, four-door Station Wagon—smartest in its field—listing for \$260 less than last year.

of 1, Chemists Wrestle with Many Atomic Problems

When cyclotrons, betatrons, and atomic piles bombard atom and change one element to another, they open a swarm of problems for chemists. The chemists' predictions of what should result don't pan out. Peter E. Yankwich, 26-year-old assistant professor at the University of Illinois, is one of the few in a half-dozen laboratories of the nation attempting to find out why.

He is trying to bring some order to the chemical problems let loose by the creation of new atoms with energies equivalent to those produced by temperatures such as exist only in the sun and other stars. One can foretell what may come from such fundamental information.

The problem is to find out why results do not come out according to chemical predictions; what is the nature of new substances resulting from atomic bombardment; why they appear in the amounts they do; why some expected compounds do not appear at all.

The Argonne national laboratory, at which the university is associated, bombards substances for Professor Yankwich in its atomic tests. Then he analyzes the material.

The bombardment produces energetic new atoms, which fly around inside the substance, breaking up molecules, ionizing other atoms, and doing general damage until their energy is used up and they can settle down to form new compounds.

Chemists, knowing what atoms are in the original target material, can draw up a list of the new compounds to be expected. In simple cases they may roughly estimate how much of each new compound should appear. But the actual results never are exactly as predicted.

That's the problem.

Charleston Gives Hotfoot Dancers with Flat Feet

The Charleston is one of the best exercises devised for flat feet. Of the 25,000 students who have taken Charleston lessons at the Arthur Murray N.Y.C. studios alone (within a two-month period) 35 per cent of them were recommended by dietitians and chiropodists.

A list has been compiled of the advantages of dancing to health and foot care. Besides the Charleston, whose toe-in, toe-out movement embodies a prescribed exercise that greatly strengthens the arches, other forms of dancing, such as fox trot, rumba, samba and waltz bring into action the muscles of the feet and legs, and stimulate circulation there which is so essential in the development of good posture and good health.

Foot care is also essential to those who would enjoy dancing to the utmost. Corns, calluses and other foot troubles should be treated by a podiatrist or chiropodist, and the feet kept supple by wearing shoes that properly fit at all times.

Dog-Day Dog Tip

A seasonal bulletin from veterinary medical authorities offers dog owners these suggestions on the summer care of pets: Let dogs stay in the shade during the hot-sunshine hours and do not give them strenuous exercise. Feed an adequate and nutritious ration, but cut down a little on starchy items. Replace water in the drinking pan several times a day so that cool water will be available at all times. If the dog goes with the family on summer trips, don't lock it in the car with the windows closed—particularly on hot, sunny days—as this may cause heat stroke.

Virus Disease Check

A new type of weapon for combating the virus diseases, including polio, mumps, and the common cold, may result from research described to 500 chemists at the American Chemical Society's second national medicinal chemistry symposium opened at the University of Notre Dame recently. The research, still in the exploratory stage, is an outgrowth of the successful synthesis of the drug chloromycetin. Dr. Harry M. Crooks, Jr., of Parke, Davis & Company, Detroit, Mich., told the symposium, which is sponsored by the society's medicinal division. Dr. Crooks was one of the chemists who synthesized chloromycetin—the first antibiotic to be made artificially.

Garden Insect Control

If you planted a vegetable garden, chances are you have run headlong against some insect enemies, says Gordon T. Mickle, entomologist for the Colorado A and M extension service. Early planted vegetables are usually attacked by flea beetles as soon as they push through the ground. A five per cent DDT dust, or two tablespoons of 50 per cent wettable DDT per gallon of water, can be used to control these tiny beetles. That is, provided the tops are not for human food, he cautions. On such vegetables as spinach, lettuce, beet tops, etc., a 75 per cent rotenone dust should be used since it is relatively non-poisonous to man.

Inventions Speed Labor in Today's Modern Offices

Today's business employee lives in a mechanized mecca.

An automatic letter-opener opens the morning mail. The employer calls his secretary on the interoffice communications system. She takes dictation on her stenotype machine, transcribes it on her typewriter, and a special machine automatically seals and stamps the envelope. When she catches up with her work, she reaches for the voice recorder for assignments dictated some hours earlier by her employer.

When she is out to lunch, an electric secretary answers the phone, reels off a recorded message and gives the caller 30 seconds to leave his own recorded message, then tells him to call again if he needs more recording time.

The accounting office zips up a neat and accurate column of figures on the automatic computing machines and makes entries with the speedy accounting machines—more than 100 entries per minute. By a new electronic computer, complex mathematical problems are worked out 5,000 times faster than the human mind could solve them.

Laborious filing methods are replaced by a microfilm system, punch-card files, or the revolving wheel file. Unnamed devices speed work in every conceivable phase of business.

How did it all start? They wouldn't believe it 75 years ago. No machine invented could think—much less add! But a young bank clerk in Auburn, N. Y., dreamed of the machine that would free him of his high stool and relieve his aching eyes and fingers of endless hours of copying and computing figures.

2,4-D Weed-Killer Causing Damage by Drift to Cotton

Researchers have found that a single ounce of 2,4-D weed killer is enough to possibly cause serious damage to as many as 35 acres of cotton.

The national cotton council is issuing this warning after receiving a number of complaints of cotton being damaged by 2,4-D drifting on to cotton during its application to other crops.

Application of insecticides and other chemicals with equipment that has been used to apply 2,4-D also has been responsible for damage to cotton. The council's production and marketing division warns that even a small amount of 2,4-D remaining in a sprayer or container is enough to seriously injure susceptible crops.

If it is necessary to use the same equipment on susceptible crops that has been used previously to apply 2,4-D, machines should be cleaned thoroughly with a solution of household ammonia or a mixture of activated charcoal.

Rinse the sprayer thoroughly with water. Prepare a one per cent solution of household ammonia, using two teaspoons of ammonia to each quart of water. Fill the sprayer and leave the solution in the tank, booms and hoses from 12 to 24 hours. Drain and rinse thoroughly with water. Cleaning with commercial mixtures of activated charcoal is much quicker but more expensive.

Food Requirements Vary

According to a Twentieth Century Fund report those engaged in very active physical work require much more energy-producing food such as potatoes, flour, legumes, meat, fats and sugars than do sedentary or moderately active workers. They, however, require larger quantities of the leafy, green and yellow vegetables and the same amount of protective foods such as milk, eggs, and citrus fruits. Both the active workers, who become physically tired, and the sedentary workers, who become fatigued by the mental strain and emotional tension of their work, are alike in their need of plenty of restful sleep to restore spent energy and make them fit for the next day.

Weight of Gold

The troy ounce is the unit in weighing gold. An ounce of fine gold means an ounce of pure gold. In 1934 the President proclaimed the United States gold dollar to be 15 5/21 grains of gold, nine-tenths fine, which is equivalent to 35 per fine troy ounce. The former value of gold was \$20.67 per fine ounce, based on the dollar of 25.8 grains of gold nine-tenths fine. Weighings are made in troy ounces and decimals thereof. Jewelers use the penny-weight and grain. The troy pound never is used.

Telling Age By Teeth

An individual's age can be told within three to four years by examination of a single tooth, according to a newly-devised system. For the first time, a mathematical formula to detect the age of a person by his teeth has been worked out by Dr. Costa Gustafson, of the state dental department of Malmo, Sweden, who reported results of a hitherto unknown accuracy. Under Dr. Gustafson's formula, age can be determined within 3.6 years, as contrasted with errors up to 32 years in methods in longtime use.

Quill T. Stevens of Bandera, Texas Died July 24

Quill T. Stevens, of Bandera, Texas, brother-in-law of Will Newman of Silvertown, died July 24, 1950 at the home of his daughter, Mrs. Evalena Garrett, in Kerrville, Texas, following an illness of about five months. Funeral services were conducted at the First Baptist Church in Bandera with Rev. W. S. Bunton, pastor of

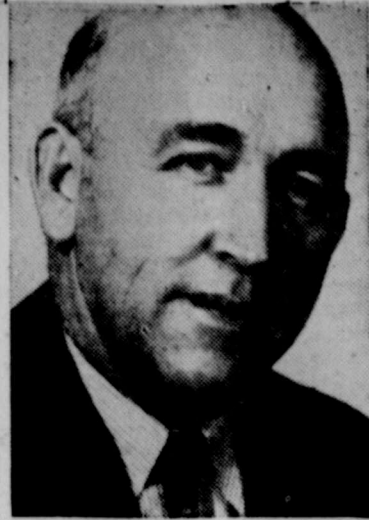

the Center Point Baptist Church, officiating, assisted by Rev. W. H. Price and J. Marvin Hunter.

Mr. Stevens is survived by his wife, three children, Forrest Stevens and Roy Stevens of Bandera, and Mrs. Evalene Garrett of Kerrville; one brother, A. W. Stevens, of Boerne; three half-brothers, Samie, Vane and Tommie, of Bandera; one sister, Mrs. Lottie Rouche, of Sonora; his stepmother, Mrs. Tillie Stevens, of Bandera, and ten grandchildren.

CARD OF THANKS

We want to thank our friends of Silvertown for their kindness shown to us in the death of our mother and grandmother, Mrs. Freeman. Especially do we want to thank Brother Adcock and Brother Elrod and Mr. and Mrs. Watson Douglas for their service rendered.

Mr. and Mrs. Jess Freeman, Floyd Freeman, Mrs. Susie Blackwell, Mr. and Mrs. Edd Caster.

REV. FRANKLIN E. SWANNER, PLAINVIEW, TEXAS

Baptist Church Revival to Start Sunday, August 20th

The Baptist Revival scheduled to start Sunday, August 20, will be conducted by Rev. Franklin E. Swanner, of Plainview. Morning services will begin at 10 o'clock and evening services will begin at 7:45 with prayer services; 8:00 o'clock preaching. All are invited to attend the services.

Preserving Peaches By Freezing Most Profitable Method

Freezing is one of the newer methods being used for preserving peaches and when properly done is very satisfactory. According to Louise Mason, extension foods and nutrition specialist of Texas A and M College, several factors are involved in the selection and preparation of the fruit and in the freezing process that must be given careful attention if the results are to be satisfactory.

She says the best varieties for freezing are Elberta, Hiley, J. H. Hale, Hale Haven and Frank. The peaches to be frozen should have reached the choice eating stage. This means firm, evenly ripened fruit of good quality.

After the peaches have been selected, they should be carefully washed and peeled. They should be treated to prevent discoloration and she says there are several products available for doing this job.

Ascorbic acid, vitamin C, is one of them. It is available in powdered and tablet form and she says that one and a quarter of the 100 milligram tablets should be used for each pint of fruit or one-half teaspoon of the powdered ascorbic acid for each quart of syrup. The ascorbic acid should be dissolved in the syrup before it is poured over the fruit, she adds.

Citric acid is also recommended for preventing discoloration. She says to dissolve one-fourth of a teaspoon of citric acid in one quart of cool water and to leave the fruit in the solution only 15 or 20 minutes, then remove, place in containers and cover with a sugar syrup.

Miss Mason says there are several commercial preparations available on the market that are recommended for preventing discoloration but if they are used, the manufacturers' directions should be carefully followed.

She lists the following as the essential steps in freezing peaches. Select fresh, firm and ripe peaches. Wash them well, peel and remove the seed and half or slice. Then treat to prevent discoloration. Package the fruit in the containers for freezing and cover with sugar syrup. The syrup can be made by dissolving three cups of sugar in one quart of water or she adds, dry sugar may be preferred to the syrup.

Next, she continues, place crushed waxed paper or cellophane on top of the peaches to keep them under the syrup. Seal the containers and quick freeze immediately. Miss Mason says that when frozen peaches are properly prepared and stored, they will retain their good quality for at least one year.

Sacred Tibetan Volumes Displayed at Yale Library

Eighteen leather-covered cases containing a collection of rare and sacred Tibetan books arrived at Yale university library some time ago, after a six-months' journey by pack train and steamer.

The 99 volumes within the hand made crates make up Tibet's holy "Kagjur." The collection was presented to Yale by His Holiness the 14th Dalai Lama, 14-year-old ruler of that remote land.

The "Kagjur"—or "Kanjur" as it is known to American scholars—contains almost 1,100 separate works attributed to the Buddha and is immensely valuable to Sanskrit scholars because of its great accuracy.

Each one of the 99 volumes was wrapped in orange cloth, symbolic of Tibetan reverence. The books measure two feet long by six inches wide and contain between 300 and 400 loose-leaf pages, block printed on both sides and held together by boards.

The books were placed in wooden crates and then the skins of yaks—Tibetan oxen—were bound around the crates, stretched tightly and sewn together with rawhide. The skins protected the books from the elements.

A pack train of small Tibetan horses carried the collection from Lhasa, capital of Tibet, across a 1,000-mile mountain route to New Delhi, India. The crates were then sent to Calcutta and finally shipped by freighter to the United States.

The newly-acquired Yale collection is a Lhasa edition, which exists in this country only at Harvard university. It was first printed in the reign of the 13th Dalai Lama, who was enthroned in 1893 and died about 1933.

Dreary Barn May Lead To Pneumonia for Calf

Reports in veterinary medical journals indicate that calf pneumonia is becoming more prevalent, especially on diversified farms and in small herds where not enough attention is paid to scientific housing. Generally, it strikes calves under six months old, the most susceptible age being three to eight weeks. As calves grow older, they become more resistant to the disease and even if they happen to contract it, their chances of recovery are better.

In human beings, pneumonia is likely to strike when the body is in a weakened condition, such as after a bad cold or after influenza. The same applies to calves, particularly if they are neglected when they have digestive disturbances or if a seemingly mild case of "snuffles" is allowed to go on unchecked. Susceptibility to pneumonia is even greater when, in addition to such disturbances, the calf is inherently weak—due to improper nutrition of the cow during pregnancy.

Under such conditions pneumonia can easily gain a foothold. Chilling or exposure to dampness and filth may be the opening for a serious attack. If the calf is housed in a dark, gloomy pen, with little or no exposure to the sun's rays, its powers of resistance are lowered still further.

Viruses Studied

Key to victory over many viruses that now cripple and kill domestic animals may soon be found with the aid of the electron microscope. Viruses, which are disease-producing agents too small to be seen under most laboratory instruments, can now be studied under electron microscopes that magnify objects 60,000 to 70,000 or more times. According to veterinary medical reports, the viruses of equine infectious anemia, Newcastle disease of poultry, and foot-and-mouth disease recently have been photographed through these powerful magnifiers. Information gleaned from a study of the photographs is expected to guide future animal disease research.

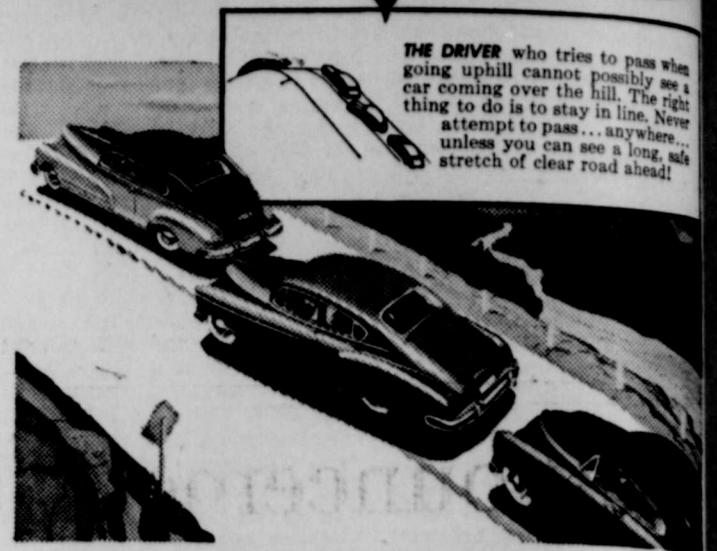

To Extend Life of Glazing

Before any glazing is started, on either wood or steel sash, a good priming paint should be applied. The use of shellac and varnish as primers should be avoided because glazing will not stick to them. A metal primer that will both retard corrosion and provide a rough surface should be applied to all steel sash before glazing materials to insure a long-lasting bond between metal and glazing material. The priming coat should be allowed to dry thoroughly before glazing material is applied. The glazed sash should be painted very soon afterward to extend the life of the glazing job.

Priming for Metals

Exterior metal surfaces which are unfinished—or metal surfaces which have been sand blasted to remove rust—need careful priming. The types of primers that are satisfactory for the purposes include and

Bailey County Farmers Support Underground Water Issue

Bailey County farmers, meeting last Monday night in Muleshoe, added their support to proposals already made by six counties for creation of underground water conservation districts.

In a business session, the Bailey County Water Conservation Association elected Henry Schuster as president, and unanimously approved a petition requesting designation by the State Board of Water Engineers of an underground water reservoir. Eighteen persons signed the petition.

Bailey county is among 21 Panhandle-South Plains counties given notice of a public hearing in Plainview August 29 at which the State Board will "designate any or all (of the counties) as an underground water reservoir or subdivision thereof."

The board recently returned filing fees for petitions submitted by Lamb, Hale and Hockley counties, announcing that it has jurisdiction on its own motion under provisions of the law to set a hearing. The board felt that one hearing would expedite the designation required by law.

Counties named in the hearing notice were Armstrong, Bailey, Briscoe, Castro, Cochran, Crosby, Deaf Smith, Dickens, Floyd, Garza, Hale, Hockley, Lamb, Lubbock, Lynn, Oldham, Parmer, Potter, Randall, Swisher and Terry.

Mr. and Mrs. T. H. Hopkins, of Chillicothe, visited the past week with Mrs. Hopkins' parents, Mr. and Mrs. J. D. Bingham. Mrs. Bingham who has been quite ill is much improved and able to be up Mr. Bingham said Tuesday.

'Tired Feeling' Affects One Out of Two, Says M.D.

Call it "that tired feeling," if you wish, but doctors have a lot of complicated names—chronic nervous exhaustion, psychoneurosis, benign nervousness, functional disorder, anxiety state, neurasthenia, constitutional inadequacy and others.

It is a major American disease which affects perhaps one out of every two persons seen by doctors, according to a Stanford university physician.

"It is generally believed that one third to two thirds of all patients who seek medical help have as the most significant cause of ill health an emotional or neurotic disturbance," Dr. Dwight L. Wilbur of Stanford university school of medicine, San Francisco, writes.

"This disturbance may manifest itself in a large variety of ways, but nervousness and fatigue are among the commonest symptoms." Other symptoms are insomnia, irritability, inability to relax, fatigue in the morning, mental conflicts, difficulty in making decisions, and all sorts of aches and pains, particularly disorders of the heart and digestive system, he says.

The usual causes include an emotional problem or some situation in the victim's life, overwork with inadequate rest and relaxation, and inadequate recovery emotionally from an infection, according to Dr. Wilbur.

"There is not just a single level, but a wide range to the limits in structure and function of the normal person," he explains. "Acute fatigue or nervousness can be induced in any normal person by lack of sleep and sufficient threat to security; recovery generally is rapid with sleep or removal of the threat. When these symptoms are chronic the period of recovery will be longer, even after the cause is removed."

Gardeners Warned to Use Lime with Great Caution

Home gardeners are warned by the national safety council to be careful of the lime they use on their lawns. Spreading of the wrong kind of lime can cause serious burns if the feet are moist. Even perspiration can be dangerous.

Lime is a loosely used term, the Council says. The pure oxides of calcium or magnesium, known as burned lime, never should be used on lawns and are dangerous to have around the house.

Slaked lime or builders' lime is slightly caustic and is not recommended for lawns. Impurities usually remain in commercial hydrated lime which can cause painful burns when uniting with moisture on the skin.

Carbonated lime or ground raw limestone are recommended for lawns because they are not caustic, and they act more slowly in neutralizing the acid soil condition, which brings about the change at a rate more beneficial to grasses.

HOW LUCKY CAN YOU GET?

WELL, YOU MIGHT find a gold mine, providing you know where to look. Maybe you'll inherit a fortune from a rich uncle, if you've got a rich uncle.

But, in the final analysis, it's usually the guy who looks ahead, who plans and works and saves for the future, that ends up with all the marbles.

Here, as in no other country in the world, you've got a chance to do just that. Experts predict that during the next ten years this country will experience the greatest economic boom in its history and . . .

There's no time like the present for you to start salting a little something away—each month—in U. S. SAVINGS BONDS!

Backed to the hilt by Uncle Sam, Bonds pay you 4 dollars for every 3 dollars invested. At the same time, Savings Bonds are one of the safest, surest places to invest your money.

And here's the pay-off! Savings Bonds can be purchased under either of two entirely automatic plans. Signing up for either plan makes saving, for you, a positive certainty!

Automatic saving is sure saving U.S. SAVINGS BONDS

This is an official U. S. Treasury advertisement—prepared under auspices of Treasury Department and Advertising Council.

U. S. Women Harming Teeth With Bobby Pins

BOSTON, Mass.—Dr. S. S. Livingston reports that American women are causing great damage to their teeth with bobby pins.

The reason, women roll up their hair, hold it with one hand and then holding a bobby pin in the other, open it with their teeth.

A simple homemade device for opening bobby pins is to place as many pins as are needed for the hairdo around the rim of a drinking glass. With the flat side of the bobby pin facing the inside of the glass, one can pick off each bobby pin, already open—and the teeth need not be used.

Dangerous to Teeth

Besides opening bobby pins with their teeth, many girls are forming the dangerous habit of digging between their teeth with hairpins, bobby pins, common pins and toothpicks. Some do it to remove food; others, because they are nervous.

Toothpicks in one form or another have been in use probably for thousands of years. They are traceable to A. D. 23, when their use was first recorded. They were used in the Roman, Grecian and Chinese periods of history.

Various materials have been utilized—gold, silver, ivory, quills and now wood. It was a custom in colonial days for the luxurious host to offer his dinner guest an expensive gold or silver toothpick after his meal.

Chips Enamel

Today toothpicks are usually made of hard wood, such as birch or maple. Soft wood is avoided by manufacturers because it tends to fuzz and splinter, shedding splinters in the mouth when used.

Dr. Livingston says the bobby pin may add to feminine hair beauty, but they have come to be serious threats to the dental charm of the girl who uses her teeth to open them. When a girl opens a bobby pin with her front teeth, she usually chips or breaks off the biting edge of her teeth. The tooth enamel microscopically is made up of enamel rods, just like the bricks that go to make up a brick house. Once these enamel rods begin to chip, they continue to break off until a part of the crown surface of the tooth is destroyed.

Americans Just Can't Take It Physically, Doctor Says

MEMPHIS, Tenn.—The modern American can't take it, Dr. C. H. McCloy of the University of Iowa, told a recent meeting of the association for physical and mental rehabilitation.

In fact, the average person who works is so out of shape physically that when the week-end arrives he has to take time off to rest up, says Dr. McCloy, although he admits fewer people get sick today.

"Americans seem to specialize in getting out of shape," the professor asserted. "Twenty years too soon they get down to the point where they don't have much life."

He believes a person 70 years old should be able to do a day's work if it is not too strenuous without feeling exhausted.

Even doctors ignore the importance of the annual physical examination, he said, adding: "I'll bet that if you asked 10,000 doctors if they had a check-up last year, only 5 per cent of them could say they had."

Conducting research on physical education at the University of Iowa, Dr. McCloy said exercise is important in that "while it does not prolong life, it raises the quality of living."

Truman Collects 32 Year Old Debt on Western Tour

BURLINGTON, Iowa — President Truman collected a 32-year-old debt on his recent nationwide tour.

Elmer Van Tine, an employee of the Iowa ordnance plant in Burlington, borrowed \$25 from the President after the armistice in 1918 so he could make a trip to Kansas City to join the Shrine with Mr. Truman.

When the President's special train stopped at Burlington on the nationwide tour, Van Tine came aboard and handed Mr. Truman a check for \$50, explaining that half of it was interest.

The President accepted the check and told Van Tine: "Thank you. You didn't have to do this."

Van Tine was a cook in the President's World War I company.

Truthfulness Doesn't Pay Off for Chicken Thief

PITTSBURGH, Pa. — Matthew Simpson, 30, found that persistence and truthfulness, long considered virtues, did not pay off for him.

Hailed into court, he admitted taking the same automobile from the same parking lot twice within four days. He also was charged with using the car in the theft of 30 chickens from Mrs. P. J. Roasa.

"That's not true, your honor," he said. "It was only 25, honest."

Simpson drew a two to four year term in the workhouse.

1950 Windmills Go Modern As New Service Field Opens

Don Quixote would get a shock if he tried tilting with 1950 windmills.

The graceful, circling arms of that would-be knight's adversary bear little resemblance to the flashing, steel blades of the modern windmill — designed along Eiffel Tower lines for use in man's newest effort to generate electricity by wind power.

The 20th century version of the windmill will get its latest test on Costa Head, in the stormy Orkney Islands. Wind data already studied indicate a potential energy supply there that may match the area's hydroelectric resources.

If the steel windmill under construction in the Orkneys proves successful, engineers see in the future a new source of power only half as costly as that generated by coal-consuming plants.

It will mean, too, a fresh career for the ancient windmill that began its service to man sometime before the 12th century and has worked faithfully through the years grinding his corn, irrigating his fields, pumping his water, and on occasion, even "speaking" for him.

History neglected to record the invention of windmills, but they first became common in Germany and Holland. By the 15th century the "pumping mills"—used for draining land—were a Dutch necessity. Despite the unpredictability of the wind, windmills proved an enormously effective power machine for those days, since a well placed mill generally ran eight out of 24 hours.

Insect Control Urged To Curb Livestock Loss

An insect-control program will do much to cut down livestock losses this summer.

Flies, ticks, and mosquitoes play a part in spreading many infectious diseases of animals, including the malaria-like cattle disease known as anaplasmosis, the so-called sleeping sickness of horses, swamp fever, and bovine mastitis. In addition, insects such as screwworm flies and heel flies are directly responsible for costly parasitic diseases.

Besides all that, insects cause discomfort that may be reflected in decreased gains and milk production.

A general clean-up of barns and premises, including draining or fencing of swampy places where mosquitoes and certain other parasites breed, is recommended as the first step.

Use of good insecticides of known safety for spraying barns and for spraying or dipping the animals is the next step suggested. In this connection, stock owners are urged to "keep informed of latest developments in the use of insecticides."

Research is constantly turning up new facts about the value and safety of insect-killing chemicals and it is essential that farmers know the right kind of product to use for each species of stock.

Banish Washday Blues

Snow white laundry, without the use of soap, was forecast by C. A. Stokes, of Godfrey L. Cabot, Inc., and Professor J. E. Vivian, of M. I. T., as they opened the discussion of ultrasonics at the Boston regional meeting of the American Institute of Chemical Engineers. Soiled cloth becomes magically clean in pure soap-free water when showered with these intense high-pitched sound waves. Frayed collars and cuffs will be a nuisance of the past when the new process is applied. As a dramatic demonstration, an ultrasonic gun can even be used as a giant under-water pen to write names in sparkling white on soiled cloth, the engineers said. The dirt particles literally leave the shirt behind as they are given a push of 12,000 miles per second by the intense sound vibrations.

Double Duty Beds

At the turn of the century the only type of double-duty bedding available consisted mainly of an upholstered folding cot built with wood slats. A wool mattress and pillow were combined in one piece and the whole covered with striped ticking. It wasn't attractive either in appearance or for sleeping comfort. Today's double duty bedding is quite a contrast. Smartly designed davenport beds and studio couches are upholstered in eye-appealing fabrics which blend with the other furnishings of the room. Many modern double-duty beds are indistinguishable from standard type davenports—until they open up to provide comfortable sleeping for the night.

Milk Experiment

During the past several years considerable experimental work has been done on "prepartum milking" or milking a cow before she comes fresh. It was thought that this practice might make it possible to eliminate many of the cases of congested udders at calving time, and also to prevent many cases of milk fever. Experiments at Kansas State college and elsewhere have shown that there is no advantage to prepartum milking. It does not help congested udders, nor prevent milk fever. In addition it removes the colostrum which is necessary for the newborn calf.

ASSEMBLY OF GOD CHURCH REVIVAL AT QUITAQUE

You are invited to hear seventeen year old Rev. Mrs. M. W. Lee, preaching the old time gospel at the Assembly of God Church in Quitaque each evening at 8 p. m. Everyone is invited to attend.

Mrs. E. A. Bellinger and mother, Mrs. J. H. Carter, visited in Plainview Sunday afternoon with relatives.

Mrs. Carl Hawkins and daughters of Lubbock, spent last Tuesday with Mr. and Mrs. Ray C. Bomar, Linda Kay and Penny Ray remained for a weeks visit.

To be safe, the water supply for the farm home must be protected from contamination by dust, ground water, insects and animals.

Castro County to Celebrate 59th Birthday Aug. 12th

Dimmitt, August 9.—The Castro County Chamber of Commerce will revive the annual Castro county birthday celebration August 12 after a lapse of twelve years. The last celebration was held in 1938 and was postponed in 1939 because of the construction of the county's present modern court house, and has not been held since.

The program will get under way Friday night, August 11 with the annual amateur rodeo sponsored

by the Dimmitt Rodeo Association. Registration for old settlers will begin in the lobby of the county court house at 8:00 a. m. August 12 and a home-coming parade at 10:00 a. m. followed by the announcement of parade winners and presentation of prizes. A queen will also be selected from those who participate in the parade. Beginning at 11:30 those who qualify at old settlers and pioneers of Castro county will be honored with a free barbecue sponsored by the chamber of commerce.

Beginning at 1:00 p. m. a general assembly will be held at the

county fair grounds. The general assembly program will consist of a short memorial service for deceased Castro county pioneers, an address by Laura V. Hamler, of Amarillo, recognition of special guest and old settlers, and election of officers to head the 1951 Old Settlers Association. Joseph N. Cowen, local real estate agent and president of the chamber of commerce has been appointed to serve as temporary chairman of the celebration.

Prince Hoards Jewels Worth 10 Million

DARBHANGA RAJ, India—There is one man in the world who could never himself with jewels and have enough left to deck out several other persons, if he was so inclined. In fact, his jewels are estimated to be worth \$20,000,000.

He is the Maharajah of Darbhanga, one of the few remaining Indian princes who has more money than he knows what to do with. He has a brother nobles, many of whom owe him money, lost their jewels, palaces, fleets of motor cars and other properties when the government of India took over recently.

The Maharajah, however, has no state and he was not affected. His jewels, his lands, his palaces and his palaces are his own, and while the government would like to whittle him down, as a member of the parliament he is able to look after his interests.

Owns Famous Necklace
The impending abolition of absolute landlordism in India will take something away from him as well as the biggest of all, but he figures to keep upwards of 20,000 acres that are not tenant-farmed. Anyhow, it said that if he lost every inch of his land holdings and never earned another rupee from his many other enterprises, his present accumulated fortune would support his family and his 22,000 employees for four generations.

His treasure of jewels includes the famous Marie Antoinette necklace, purchased at auction for 60,000 pounds, from which he received the largest diamond because it had a black spot.

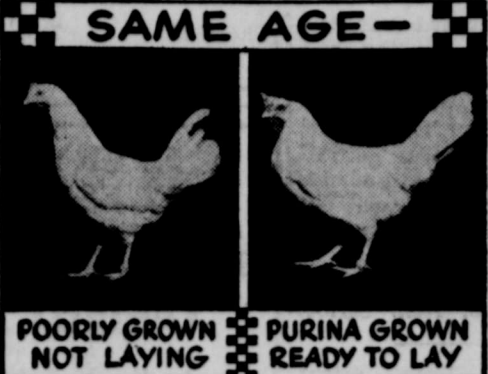

He also owns the world's largest emerald, which was purchased by his father from a fugitive Nepalese prince for \$180,000 but is thought to be worth four times that today.

Among his means of transport in addition to solid silver carriages, Rolls Royces and a private railway are nine airplanes. His palaces contain astonishing gawags collected by succeeding generations with varying kinds of taste. In one room, where thrones with frameworks made of enormous ivory tusks are flanked by four stuffed tigers, the walls are lined with distorting mirrors, like aoney Island "fun house".

Anything Can Get Into Woman's Hair These Days

ROME, Italy—The International College of Hairdressers had their annual convention in Rome recently and proved, if nothing else, anything can get into a woman's hair these days.

They put on a demonstration of evening hair styles with 20 models which used everything from dye to laces. About the only things that were not popular were long hair and dark brunets.

Almost everything that came to hand went into the masterpieces. There was hair with egret feathers; hair with lace; hair with orchids. Artificial butterflies were used and feathers and metallic leaves.

In almost every case the hair was either dressed with jewels or sparkling with tiny brilliants.

The hairdressers from seven countries seemed unanimous on the short hair style—with ears right out in the open—and on their preference for blond, red haired and silver gray models.

More and More People Order Video for Bedroom

CHICAGO—More and more people are watching television in bed, so says a large furniture company. As a result the sale of mattresses, pillows, and bed springs are booming. The announcement was made at the summer home-furnishings market held in Chicago.

Citizens:

My most humble thanks to the entire population of Briscoe County for the manner in which all of you so graciously received me.

To those who voted for me my further compliments for your extreme bravery for placing such faith in an unproven lad.

Gratefully yours,

Robert Hamilton

The Supervisors of The Cap Rock Soil Conservation District are: Chairman, Earl I. Cantwell; Vice Chairman, Bray Cook; Secretary, Chester Burnett; L. A. McJimsey and Glynn B. Morrison.

Crop residue management is one of the most important of all soil and water conservation practices. This is especially true in areas of limited rainfall such as the Cap Rock Conservation District. Since both wind and water erosion are a problem here, crop residue management serves as a protection against these forces. Until recent years any farmer that left residues on top of his soil was thought of by his neighbors as a "sloppy farmer." The common practice was to clean till or turn all feed stalks and other

material completely under leaving the ground bare. The practice was used to some extent in the past on deep sandy lands and other places as an emergency measure, but has been accepted only recently as a desirable practice on all types of land.

Crop residue management means leaving the residues from crops grown, on the surface or in the top two or three inches of the soil. In this area, due to our limited rainfall, the residues will decompose more rapidly near the surface of the soil than when plowed under fairly deep. The decomposition of the residues builds a greater organic content in the top five inches of soil and improves the mineral and plant food content. It improves the soil tilth, causing the soil particles to aggregate, thus helping to prevent crusting or baking. In addition the residues aid in the prevention of wind and water erosion when properly managed. They break the force of raindrops, slow down the horizontal movement of the water, and hold the soil against the winds force.

In recent years many new kinds of implements have been developed that aid in proper residue management. In addition, older type implements are being used in such a way as to bring about the desired results. The tillage operations will need to break up the clumps of residue and leave the individual particles on or near the surface of the land. Of course in order to have correct residue management a residue producing crop must be grown. Most of the crops grown as feed crops in the Cap Rock Soil Conservation District are high residue producing crops. Small grains such as wheat and rye are among the highest forage producers. The grain sorghums, sweet sorghums, sudan, combine milo, etc., also produce sufficient residue when it is properly handled. There is no way that cotton can be considered as a residue crop because when the plants die, the leaves blow away leaving the land nearly bare. When cotton is grown, any late grass that is left on the land will help protect it.

Crop residue management is one of the more efficient conservation practices, and yet it is the most

MILDRED VAUGHAN AND FAYREE McMINN WILL ENTER SCHOOL

Mrs. Bud McMinn and Mrs. L. V. Vaughan and Mildred went to Plainview Monday to find a room for Mildred and Fayree, who are going to stay together and attend school. They moved Fayree to their new home. Fayree has been staying with her brother and working at the Alexander Drug. Mildred moved over Friday and entered business school on Monday.

Mr. and Mrs. Travis McMinn are moving to Brownwood where they are entering school at Howard Payne Baptist College.

easily applied. There is practically no work required other than the normal farming operations. Any tillage operations needed to break up clumps of residue will usually be needed anyway to control weeds. Immediate results of crop residue management are not as apparent as those over a period of years, but the results are worth the wait.
