Outside These Counties

... For The Lamp of Liberty

We have been hearing so much about the marvels of science, that by now the triumphs of technology go in one ear and out the other. If anybody wants to split an atom, say we, yawning, let him go ahead.

But it does bring us up with a start when we realize who extended comforting symthat we'd have to be not merely rich, but filthy rich to pathy and help in our recent drive a car if the oil industry had sat on its hands and was still satisfied to turn out two or three gallons of gas vice, floral offerings, and other from a barrel of crude oil (as it used to), instead of 18 kindnesses, we are deeply grateto 20 (as it does now).

And the same goes for developing scientific methods for finding new oil fields, and learning how to drill a Contribute to the Youth Center hole miles deep. In 1921, with consumption a small fraction of what it is now, we were wringing our hands because our lamp was burning low. We were pretty nearly out of petroleum. We were actively looking for substitutes. Now our reserves are the biggest we have ever

Next October, the industry is going to celebrate these accomplishments. "Conservation" will be the theme of Oil Progress Week. But before the oil boys start sounding off, we'd like to put in our two cents worth:

"Conservation" means, says our big book, "the act of preserving, guarding or protecting". What oil men have preserved for us could be no less than our way of lifeour very freedom. We shall remove our hat when the oil industry parades its achievements.

BIG BERTHA, 1953

The first atomic cannon will fire the first live atomic shell at Frenchman's Flat May 23rd. But the matter of getting the cannon out there was quite an achievement in itself. In fact, two of the 80 ton monsters were dismantled, loaded in four freight cars each, and given special routing over railroads having wide track clearances and good big tunnels.

We hope, if the military is setting any store by this weapon, that they have designed some junior models for

MIXING OIL AND WATER

It begins to look as though our coastal states will finally be given title to the lands beneath the sea up to their "historical boundaries" after years, in fact as much as a centry, of development of these "lands" by the oil-producing states.

In spite of the fact that similar bills were passed by Congress a year ago and six years ago, and both vetoed by President Truman, the resistance in the Senate to the third round by twenty-five Democrats, nine Republicans and Wayne Morse reached a new high, and included three-and-a-half weeks of that travesty on government known as a filibuster, and the further spectacle of Democrats leading a fight against what is primarily a statesrights issue.

The battle proved one thing beyond question-that a man can stand up and talk for more than twenty-two hours without falling on his face. Senator Morse said he wasn't even tired. But everybody else was.

You really When you go Ford V-8 you get this fine car power without paying a premium.

What kind of engines are you finding in more and more of America's finest cars? Yes, V-8 engines. And no wonder, for no other type of car engine available today can beat V-8's for compactness . . . and for smoothness. And Ford and only Ford offers you a V-8 engine in a low-priced car! It's the wonderful result of Ford's experience building more V-8's than all other makers combined . . . over 13,000,000 of them.

ECONOMY FLASH!

A Ford Six with Overdrive was Sweepstakes Winner in the recent Mobilgas Economy Run.

It's just one of 41 "Worth More" features that make Ford worth more when you buy it . . . worth more when you sell it.

Imagine! A car so low in first cost keeps its value better than any other car on the American Road. Used-car figures on last year's cars prove that. And with its 41 "Worth More" features, this newer, finer '53 Ford holds still greater promise of longlived value. You'll find built-to-last Crestmark Bodies. You'll find a new kind of ride that practically "repaves" the roughest roads. And these are but samples of the reasons why Ford is worth more when you buy . . . worth more when you sell.

See . . . Value Check . . . Test Drive a

What Makes One Job Better Than Another?

What if the tables were turned . . . and college graduates stopped filling out job applications, and instead, submitted questionnaires for companies to fill out? It might be they would ask:

"Why should I work for your company? . . . Is your bank balance healthy? . . . Are you expanding fast? . . . Will I get responsibility in a hurry? . . . Can I pick the type of work I like? . . . Are you fun to work with? . . . Do you have smart men I can learn from? . . . Free schooling to train me further? . . . Research and know-how? . . . Money for the finest equipment?... Will you recognize and utilize my talents?

Isn't it a sign of a pretty good job when young men with talent can have a clear road ahead, can learn from people they respect and admire, and can work on projects of national importance?

From where we sit, we've been watching this happen. Teams of people at General Electric-in their twenties most often-are solving problems of jet plane engines, new chemicals, home appliances, guided missiles . . . everything from atomic power to air conditioning. And they're working in responsible jobs, with experts of recognized authority.

Maybe it's because we're growing fast that young men move into new and bigger jobs. Or because we've been lucky enough to hire the type of men who grab responsibility and work hard to achieve success. Whatever single factor or combination it is, young men and success do go together at General Electric.

You can put your confidence in_

walls this session; walls that are to high now.

There should be a big question mark in the minds of the nome folks as to just whom these forces are actually seeking to protect.

Certainly not the farmer. He nas milk, wheat and butter running out of his ears. So the farmer is discussing acreage allotments and marketing quotas in 1954. The farmers are not producing supplies greater than still cry for milk and bread to nourish their starved bodies.

I wonder then, could it be the selfish interest of this nation they seek to protect. Interests that are scared to trade on the free world market without tariff subsidies.

These high tariff and embargo walls have already wrough a great deal of damage to American prestige abroad. They have made us appear two-faced to our foreign friends. They must think Americans are incredibly stupid. Imagine giving away billions of our hard earned dollars to them so that they can in turn buy back American commodities with it. Giving away money to nations begging to trade. Incredibly stupid? It's outrageous.

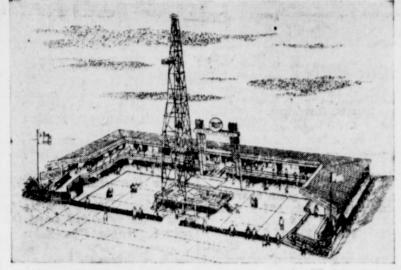

To save their self respect, few to have hurt so many. many of our friends, England, France and Germany among them, trade with their sworn They are forced to trade whereever they can because they can
