News From Our County Agent

The screwworm epidemic continues in Texas with a whopping 1,431 cases during the two-week reporting period of Sept. 29 through Oct. 12, according to County Agent Ronald Gooch. Screwworm cases close to Donley County were reported, with infestations found in Swisher and Motley Counties. Heavy sterile fly treatment is continuing in counties that have screwworm infestations.

The Mission Screwworm Laboratory officials expressed fear that these outbreaks will continue northward unless livestock owners hold off on all animal surgery until cold weather arrives. Livestock producers are urged to check their animals closely and treat all wounds. Samples of all worms found in wounds should be collected and sent to the Mission Screwworm Laboratory for identification. Mailing vials for sending samples are available at the County Agent's office, Gooch said.
