It must be a thrill to take off in a space ship and orbit around the earth. It must be especially thrilling to get put off the ship in space and float about in the void. We'll let the younger men have the thrills, however. The four-day orbit just completed by McDavitt and White put the United States first in several categories of space exploration. It won't be long now until someone goes to the moon and lands then returns to earth and we hope the United States will be the first to do so.

If you will notice, the city finally got the holes in the pavement in front of the Dr. Johnson residence repaired. It is a job well done but a seal coat needs to be put on all of the streets that are paved. Maybe that will be done before long. It would lengthen the life of the pavement.

If you have noticed the city park the past few days you have noticed that the weeds that had grown rapidly recently have been cut down. The work was done with a shredding machine borrowed from the county commissioner.

Two Lone Wolf Employees Complete Short Course At A&M

According to James Hull, Manager of Lone Wolf Electric Co-operative Inc., of Colorado City, two employees have just returned from Texas A & M University after completing a short course on Maintenance of Oil Circuit Reclosers and Sectionalizers. Completing the course were James Fox, Line Foreman and Lonnie Wyrosdick, Maintenance Line-man.

Classes were conducted by Roy Pantell and Kim Ivy, with Texas A & M Job Training and Safety Division. The course was highlighted by instruction from Floyd McLennan, electrical engineer for Kyle and Line Material Oil Circuit Reclosers. He also answered questions concerning problems encountered in the maintenance of oil circuit reclosers.

Lone Wolf Electric has had a Variac Tester for testing oil circuit reclosers for several years, but it has not been used to any degree until the present time.

Through meetings of this type, Lone Wolf Electric is able to keep up with changing methods, as well as improved methods, of maintenance and can make even more dependable service available to its members.

Two Area Youths Touring Washington

Witnessing a solemn wreath-laying ceremony at the gravesite of the late President Kennedy June 9th was Kathy Anderson of Colorado City and Larry Wiggins of Ira, winners of a tour to Washington D. C. sponsored by Lone Wolf Electric Co-operative.

Perhaps the highlight of the 10 day trip, the simple tribute to President Kennedy was also observed by more than 60 young Texans and chaperones representing 29 other rural electric systems on the tour.

Kathy and Larry arrived in Washington June 7th and the next morning at a Special Congressional Breakfast they met members of the Texas Congressional delegation, including a personal visit with Congressman George Mahon, which was arranged by James Hull, Manager of the Co-operative.

Later in the day they visited the Capitol building, Library of Congress, Supreme Court, National Archives, headquarters for the National Rural Electric Co-operative Association, U. S. Department of Agriculture building and several Washington monuments.

Winners of an oratorical contest on the subject of the contributions of rural electrification to this area, Kathy and Larry learned

about rural electric systems in other states when they visited NRECA headquarters and the Department of Agriculture, of which the Rural Electrification Administration is an agency.

Many more thrilling sights and scenes are in store for them during the remaining five days of their tour.

Texas High School Students Challenged

Austin, Texas—A challenge to scientifically-inclined Texas high school students to seek careers in the broad fields of nuclear science was made in the closing sessions of the Texas Nuclear Science Symposium for High Schools that ended Wednesday at the University of Texas. Nearly a dozen outstanding scientist and educators addressed the 300 students and 200 high school science teachers in the four-day symposium co-sponsored by the Texas Atomic Energy Research Foundation and the University of Texas.

The students were told that this nation is on the verge of an age of "energy unlimited" in which man will have almost unlimited power to extend and transform

his environment. They heard Dr. Gerald F. Tape, member of the U.S. Atomic Energy Commission urge them to complete many of the tasks that present day scientists have started. Dr. W. E. Drummond, professor of physics at the U. of T., also spoke to the group.

The TAERF, composed of 10 investor-owned electric power companies in Texas, including Texas Electric Service Company, is supporting a major research effort aimed at harnessing the thermonuclear (fusion) reaction—the source of power of the hydrogen bomb—for the eventual economical generation of electricity.

This research is being carried out in the laboratories of the General Atomic division of General Dynamics Corporation at San Diego, California, and at the University of Texas and Texas A&M University, where Texas scientists work in cooperation with General Atomic scientists in the long-range fusion effort.

Get a new NO-FROST refrigerator-freezer that never needs defrosting

You can say goodbye to defrosting—one of the messiest of kitchen chores—once you install a no-frost electric refrigerator-freezer. Because frost never forms—either in the refrigerator or freezer sections—there's no layer of ice to take up needed storage space. You can store more packages of frozen foods... the packages won't stick together... and there's no frost to make labels hard to read. Ice trays come out easily, too, without pounding, pulling or hammering. See the new no-frost electric refrigerator-freezers at your dealer's soon.

TEXAS ELECTRIC SERVICE COMPANY

A VIGNETTE FROM THE PAST

JUNE 5, 1931

The combine has come to Mitchell County. Two of these machines will be in operation next week at the Chester Jones Ranch in the northwest part of the county and at the Dollar Farm near Hyman where Fowler McDaniel has 280 acres of wheat. So far as is known, this is the first time that these labor saving machines have been used in the county.

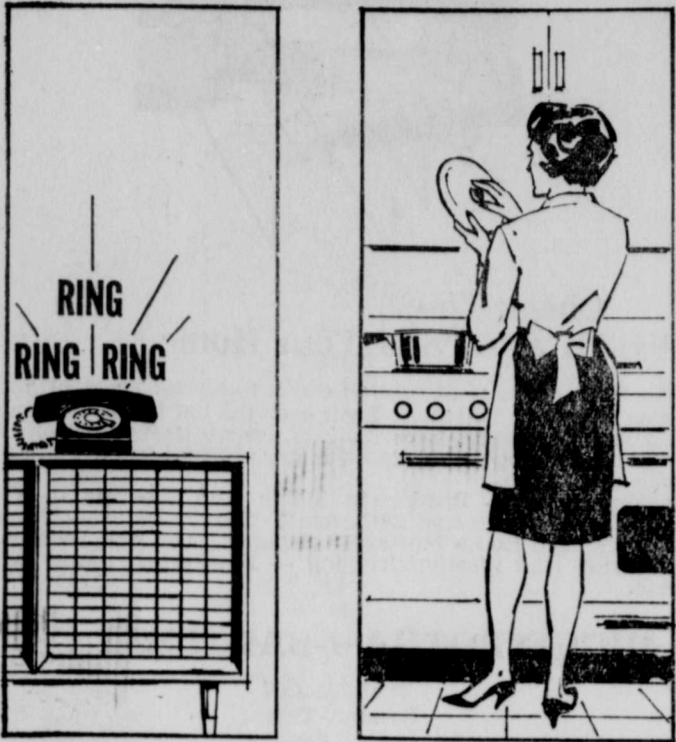

These modern machines eliminate the expense of twine, shocking and in addition return the straw back to the land where it helps to maintain soil fertility. The grain is threshed at one operation which reduces the cost of harvesting to a minimum.
