Eldorado - Divide Conservation News

Amendments to the conservation plans on W. T. Parker and Truett C. Stanford were approved at the July meeting of the board of supervisors, Eldorado Divide Soil Conservation District.

The amendment called for the clearing of 12 acres of range land for cultivation on the W. T. Parker place, and 22 acres of range land cleared for cultivation on Truett Stanford's place.

A well rounded conservation program, consisting of contour farming, terracing, crop rotation, and crop residue management is planned for all of the new land put into cultivation.

A two month deferment during the growing season has resulted in a material increase in the desirable grasses on J. H. Wagley's east pasture. A co-operator with this soil conservation district, Mr. Wagley deferred his pasture as a part of his program for continued range improvement.

Technicians of the soil conservation service surveyed the pasture and noted a big seed crop and an abundance of forage from such desirable perennial grasses as side oats, grama, hairy grama, blue-stems, buffalo grass, and curly mesquite.

The improvement in vigor of these perennial grasses was pointed out and their means of re-seeding by a seed source and by underground rhizomes was explained.

This would be an excellent time for ranchers to check the condition of their ranges, the local work unit conservationist points out. Following the recent rains the better grasses, side oats and hairy grama, blue-stems, and buffalo grass should make considerable and rapid growth, while many of the poorer grasses will make little or no appreciable growth. The failure of grass to "kick off" rapidly following abundant rain indicates poor condition and low vigor.

These better grasses are provided by nature with an excellent root system, and when properly grazed and with abundant moisture will produce much valuable feed.

Prospects for favorable moisture conditions this summer are good. Proper use of the native grasses will allow them to crowd out such less desirable grasses as needle grass, hairy triodia, and red grama. Allowing these grasses to grow and improve in the summer time will allow them to "get the jump on the bitterweed".

Pastures stocked and handled properly will respond with continuous high production of valuable forage, but if continuously overgrazed production will decrease until growth practically reaches a minimum.

BEFORE YOU INVEST, INVESTIGATE!—SAYS MERCHANTS' ASS'N

Don't be vain enough to send the requested \$15 (the usual price) if you receive in the mail an unordered miniature photograph of yourself in what appears to be an attractive case. The promoters of this racket have ways to get negatives. You may have had your photograph taken at a studio sometime previously and that studio may have sold their old negatives to the promoter, after holding them the normal length of time.

You will receive a fanciful explanation why the picture was sent—perhaps "it was used for exhibition purposes and now is being offered at a special price." If you buy it, you will be entitled to the registration of your name on the promoter's special sucker list. You are not obligated to return unordered merchandise. Do not use it but merely hold it for a reasonable length of time. If the sender calls in person, properly identifies himself and claims the picture as his property, you should give it to him. If you care to, you may demand a reasonable sum for care and custody of his property.

FARM SAFETY WEEK IS SET FOR JULY 25—31

"18,000 Farmers Killed in Accidents This Year!"

You would be appalled to read this headline in your newspaper. Yet this is the number of farm residents who die in avoidable accidents each year. It explains why the government has set aside July 25-31 as National Farm Safety Week.

The purpose of Safety Week is to eliminate at least 30,000,000 of the farm hazards that take lives. As Farm Safety Week rolls around remember that falls are the leading type of accident; accidents involving machinery rank second; burns, drownings, motor accidents, and accidents involving animals and hand tools also claim lives.

Look for hazards which might lead to these accidents, and eliminate them.

—W. G. Godwin, Co. Agent.

Conditions Favor Schleicher Cotton Insect Infestations

The prospects for a good cotton crop are excellent, states W. G. Godwin, county agent, who warns farmers to be on the lookout for insects which will thrive on the growth put out since the recent rains.

Encouraged by high prices on cotton, Schleicher County's growers have increased their acreages, as have cotton farmers throughout Texas. Cotton on the whole is looking fine, though the crop will be late.

Insects are apt to thrive on the growing cotton this year, states Mr. Godwin, who urges farmers to watch for insects. There is so much improvement in control methods, he points out, that last year's insecticides are already out of date.

Recommended methods include:

Boll Weevil (Alone)
Early Season Control (Prior to Peak Fruiting Period): 1. Calcium Arsenate, 7 lbs. per acre; 2. Chlorinated Camphene, 20%, 10 lbs. per acre; 3. 5% DDT & 3% Gamma BHC, 10 lbs. per acre.

Late season control: 1. Calcium Arsenate about 10 lbs. per acre; 2. Chlorinated Camphene, 20%, 10 lbs. per acre; 3. 5% DDT and 3% Gamma BHC, 10 lbs. per acre.

Cotton Fleahopper (Alone)
Early Season Control: 1. 5% DDT in Sulfur, 10 lbs. per acre; 2. 10% Chlorinated Camphene in Sulfur, 10 lbs. per acre; 3. 5% DDT & 3% Gamma BHC mix, 10 lbs. per acre; 4. BHC 3% Gamma 10 lbs. per acre; 5. Dusting Sulfur, 18 to 20 lbs. per acre.

Late Season Control: numbers 1, 2, 3 and 5 of the above listings.

Cotton Leafworm (Alone)
Late Season Control: 1. Calcium Arsenate, about 10 lbs. per acre; 2. Lead Arsenate, about 10 lbs. per acre.

Bollworm (Alone)
Late Season Control: 1. 10% DDT in Sulfur, 10 to 15 lbs. (3 or more applications at 5-day intervals); 2. 5% DDT — 3% BHC mix, 10 to 15 lbs. (3 or more applications at 5-day intervals); 3. Chlorinated Camphene, 20%, 10 to 15 lbs. (3 or more applications at 5-day intervals); 4. Calcium Arsenate, 15 to 20 lbs. per acre.

Cotton Aphids (Alone)

Boll Weevil and Fleahopper
Early Season Control: 1. 3% Gamma BHC—5% DDT mix, 10 lbs. per acre; 2. Chlorinated camphene, 20%, 10 lbs. per acre. 3. 1-3 Cal. 2-3 Sulfur, 10 to 15 lbs. per acre.

Late season control: same as for early season control.

Bollworm With Any Other Cotton Insect
Late Season Control: 1. 3% gamma BHC—5% DDT mix, 10 to 15 lbs. per acre; 2. Chlorinated camphene, 20%, 10 to 15 lbs. per acre. **Boll Weevil and Aphids**

FREE X-RAYS TO BE GIVEN HERE BY HEALTH DEPT.

The State Health Department mobile unit will be in Eldorado July 30-31, two days only, for the purpose of taking x-ray pictures for the detection of tuberculosis among the adults of the county. The City Hall has been designated as the place for the unit which will operate from the hours of 9:00 a. m. through 5:00 p. m. each day. Approximately 20 or 25 women clerks will offer their services in making necessary records, working in shifts of five each half day.

It is the hope of the field representative to x-ray at least 2500 people in the county from the ages of 15 and over, including the Latin American and negro population of the community. Committees from both the Lions club and PTA are cooperating in getting things in readiness for the mass x-rays, including the distribution of material, publicity, and other necessary arrangements. At the end of school, notices were sent home by the school children, notifying parents of the date which has been changed from three days to only two, July 30 and 31.

If necessary, school busses will be used in transporting out-of-town residents in for the x-ray, and the Lions club will cooperate by arranging transportation to the City Hall for aged persons who have no means of transportation.

The school public address system will probably be used in advertising the event on the two days the unit is here. Dr. Howard Smith, an expert diagnostician, who makes most of the diagnoses for the doctors in Texas, will make the diagnoses within two weeks following the taking of the x-rays. A public health nurse will contact definite or suspected cases and will advise treatment; she will also take further x-rays.

Statistics show that women are most susceptible to the disease from age 20 through 24, and men from 45 through 49 years. There are no charges for the x-rays which require only two minutes.

Arthur Montgomery reports Aug 1 to Camp Mabry at Austin for a 13 weeks' highway patrol school, which will prepare him for regular assignment in the state highway patrol system.

He also sold out his equity in the Miniature Golf Course to his partner, B. L. Blakeway, retaining the lots which Blakeway will rent. His family will probably continue to live here until he receives permanent assignment, after which they will either rent or sell their house.

To qualify for his new post, Montgomery passed two written and one physical test, and was one of 75 out of about 800 applicants who were accepted. After his 3-months' training period he will be placed on probationer's rating for another six months.

The CHURCH OF CHRIST in Eldorado cordially invites you to all services. Bible classes at 10; preaching at 11 a. m. and 8 p. m.

Do You REALLY Love Jesus?

In this series of articles entitled "Do You REALLY Love Jesus?" we are noticing some questions which will help us to test our love for Him. This week we suggest that if you love Jesus you will not only want to hear from Him, but you will talk about Him. We like to talk about that which we love. Do you make Jesus a part of your daily conversation, or are you ashamed of Him? Jesus loved man so deeply that He gave His life that man might have the privilege of eternal life. Men should be informed of this. You will find that telling others of Him will serve to deepen your affection for Him—try it. His friends like to gather and talk of Him; you are invited to assemble with them at the rock Church of Christ.

—By Alvin T. Hamilton, Minister, Church of Christ.

CHICAGO RAILROAD FAIR

You'll think you are really on an Indian reservation in the Southwest—when you visit the Santa Fe Indian Village at the Chicago Railroad Fair this summer (opening July 20).

You'll see Navajos, Apaches, Hopis, Zunis, San Juans and Jemez—125 colorful Indians living in pueblos, hogans and wickiups.

You'll watch ceremonial dances seldom seen away from the reservations, and see Medicine Men make their famous sand paintings and destroy them every day at sundown.

Indian craftsmen weave rugs, make moccasins, baskets and jewelry. In fact, in

the Village you actually see a faithful portrayal of costumes, ceremonies and living quarters of Southwestern tribes. Their way of life today is noticeably unchanged from that of their ancestors who inhabited the Southwest years before Columbus discovered America.
