Bush lauds Reagan acts as president

By ED TODD
Staff Writer

PECOS — West Texans, in what U.S. Vice President George H.W. Bush termed the "wild rough rugged country" around Pecos, flocked to the Texas-honed Bush, as he flew into a former World War II air base here.

His expressed mission was to rouse voters to support Republican Pat Haggerty of El Paso for Congressman of the 16th Congressional District in the Nov. 2 general election. But Bush primarily lauded Republican President Ronald Reagan and his efforts to right the faltering U.S. economy, blamed the Democrats and the Jimmy Carter adminstration of the 1970s for inflation and high interest rates, and then credited the president with coming up with solutions to the nation's economic ills.

Bush, a former Midlander who got into politics after he left Midland for Houston in 1960, also cited Reagan's emphasis on a strong national defense and noted efforts to rebuild this country's image throughout the world.

"We are tired about apologizing for this country at home and abroad," Bush told hundreds of West Texans, including Pecos Democrats, Republicans and independents, who crowded into a hangar for crop-dusting aircraft. And, contrary to the "malaise and sickness" which he said Carter said had stricken this land, "the president and I don't believe there is a sickness."

"Our president is doing the right thing," said Bush, who was casually dressed in tan and blue, pointing to the president's investing funds into a strong national defense and strengthening the economy. "And under Ronald Reagan, we are going to stay strong, believe me.

"We have a long way to go, but we do not have to apologize."

In his efforts to rebuild the U.S. economy, "Ronald Reagan is going to stay this course and turn the economy around," Bush pledged.

"Ours is politics of hope," he said. Bush acknowledged the dire straits of agriculture. "I know things are rough."

Contrary to his critics' stance that Reagan has "ice

Bush stumps West Texas

Vice President George H.W. Bush, a former Midlander, flew into West Texas Saturday for a campaign stop in Pecos on behalf of Republican Pat Haggerty, a candidate for the 16th Congressional District. Bush, left, addressed a large crowd in a hangar near the Pecos Municipal Airport, and then greeted well-wishers as he moved through the barbecue line, above.

U.S. says it may halt U.N. money

WASHINGTON (AP) — The United States threatened Saturday to halt payments to the United Nations and withdraw from the U.N. General Assembly if the assembly votes to expel Israel.

"Such action would do grave damage to the entire United Nations system and it would hurt us all," Secretary of State George P. Shultz said in a strongly worded statement issued Saturday. He called on U.N. members to "turn aside such initiatives."

"If Israel were excluded from the General Assembly, the United States would withdraw from participation in the assembly and would withhold payments to the United Nations, until Israel's right to participate is restored," the statement said.

It reinforced a similar threat voiced Wednesday by U.S. Ambassador Jeane Kirkpatrick, who said American diplomats are employing a "full-court press" in lobbying against the ouster campaign, mounted by Iraq and Libya against Israel in the 157-member assembly.

U.S. participation in the 15-member U.N. Security Council, which is charged with maintaining peace and security in the world, would not be affected by a withdrawal from the General Assembly, the United Nations' main forum for discussion. Neither would U.S. participation come into question in other U.N. bodies, such as UNESCO or UNICEF, in which there is "no wrongful action against a legitimate member," American officials said.

U.N. observers have said hardline Arab nations succeeded last week in getting a credentials vote on the matter postponed until Oct. 25, to allow them more time to swing African, Asian and other Third World countries behind their drive.

In the statement, Shultz also said the United States would recall its delegation to the U.N.-affiliated International Telecommunication Union Conference in Nairobi, Kenya, and end further payments to it if the expulsion attempt is approved.

Traffic accidents kill Midlanders

Two Midlanders were killed in traffic mishaps about an hour apart late Friday night and early Saturday morning, according to the Texas Department of Public Safety.

Dead are Bertha Johnson Rose, in her early 50s, of 1603 E. Hickory Ave., and Milton Boyd Harris, 19, of 500 S. County Road 1290, Space 81.

Mrs. Rose was killed in an apparent hit-and-run accident on Fairgrounds Road near Cloverdale Road (Farm to Market Road 307) just southeast of Midland about 11:45 p.m. Friday. She was pronounced dead at the scene by Peace Justice Bob Pine. Investigating the fatality were DPS Troopers Ben Valdez and Hilan Priddy, both of Midland. Services are pending at Thomas Funeral Home.

Harris was killed about 1 a.m. Saturday after the eastbound 1981 van he was driving failed to negotiate a curve 2.6 miles west of Odessa on Interstate Highway 20's north service road and rolled over. Harris was ejected from the van.

He was pronounced dead at the scene by Peace Justice Manuel Valles of Odessa. Investigating the mishap were DPS Troopers Dennis Riley and John Hunt, both of Odessa.

Harris' body was taken to Easterling-Wilson Funeral Home in Odessa. Funeral services are pending at Hanner Funeral Home in Atlanta.

Harris, a painter who had lived in Midland for two years, was born in Texarkana, Ark., on May 22, 1963. He was a Baptist.

Survivors include his father, Phillip Harris of Midland; his mother, Joy Lynn Smith of Little Rock, Ark.; a brother, Anthony Harris of Midland; his grandparents, Mr. and Mrs. Bud Harris of Atlanta and Mr. and Mrs. Davis of Texarkana, Texas.

Democrats facing tough opponent

By WILLIAM RANDOLPH HEARST JR.
Editor-in-Chief, The Hearst Newspapers

NEW YORK — President Reagan has firmly made his economic policies the main issue in our upcoming congressional elections. In a "non-partisan" TV speech to the nation Wednesday evening he was realistic about our economic ills yet steadfastly optimistic over the future of America.

Hearst

The president, a master communicator, had his Democratic Party critics nonplussed. At first they argued that President Reagan should not be allowed time to deliver a progress report on the grounds that it was too close to election time. Obviously, practical minds among the Democrats prevailed and they agreed at the last minute to reply to President Reagan's talk to the nation. Senator Donald W. Riegle, Jr., of Michigan was selected to answer. He tried a couple of one-liners in his limited time before the second game of the World Series came on.

A former Republican congressman, Senator Riegle had an impossible act to follow. As far as I've heard and read, the Democrats simply don't have an alternative to compete with Reaganomics. The president, for instance,

Editor's Report

didn't dodge or gloss over the unemployment problem, which at 10.1 percent is the highest in 40 years. But to be realistic, as the president emphasized, you must look at the "root causes." I thought that two of the most telling paragraphs of his address to fellow-Americans were:

"You can't solve unemployment

Basin Oil Show starts Wednesday

In three days, thousands of visitors from throughout the country will converge on the Permian Basin for the oldest and largest oil exposition in the country. It's called the Permian Basin Oil Show and it starts Wednesday in Odessa.

To mark this grand petroleum celebration, The Midland Reporter-Telegram today publishes its 1982 Oil Show Edition. For everything you might want to know about the Oil Show, see Sections AA-DD.

Brutality suits have increased in frequency in recent years

By RICHARD ORR
Staff Writer

A major issue in any brutality suit against a police department is — in legalese — proving "a de facto policy, pattern or practice" of misconduct that city officials either outright condone or otherwise "sanction through their deliberate indifference."

A 1978 U.S. Supreme Court decision in *Monell vs. the City of New York* created an exception to the age-old doctrine of sovereign immunity, which had largely shielded governmental entities from liability for the actions of their agents, and established that a municipality may be held liable if it can be demonstrated that the city has a policy of action or inaction that led to the damage claimed by the plaintiff, according to Odessa constitutional lawyer Jerry Lopez.

One result of that case, said Lopez, is that: "Theoretically, at least, cities now tend to exert closer supervision of the police. Also, although most officers have liability insurance, the coverage is limited. Thus, monetary recovery is enhanced by Monell."

So another result of the Monell decision has been a proliferation of brutality and misconduct suits against police departments nationwide.

"THE MIDLAND POLICE Department is not immune," Chief of Police Wayne Gideon said Wednesday. "It has become vogue in recent times to file all sorts of lawsuits against government agencies, particularly law enforcement. It is common practice now to allege civil rights violations and seek to recover damages from the taxpayers."

Two civil rights suits involving brutality have been filed against the department in federal court this year. Allegations in both suits range from false arrest to excessive use of force. And both suits maintain the city is culpable because, as stated in the Garcia suit:

"The acts of the Defendants resulted from and were taken to a de facto policy or custom of the City of Midland, which is implemented by police officers to summarily punish persons who refuse to obey police orders, whether lawful or not."

The Garcia suit was filed July 15 by Midland attorney Bob Evans. It seeks an unspecified amount of dollar damages and bears similarities to the $1 million Walter Sowell case, which was filed Oct. 7 by the Odessa law firm of Burnett and Hardwick.

A TOTAL OF 13 officers are named in the suits. Two officers were temporarily suspended after an internal investigation into Sowell's allegations of brutality, and a disorderly conduct charge against the 18-year-old former furniture store employee was dropped by the city attorney's office prior to a two-day jury trial last May that ended in acquittal on a public intoxication

One-liners abound in agriculture race

AUSTIN, Texas (AP) — Fred Thornberry calls his opponent, Jim Hightower, a "liberal agitator." Hightower says Thornberry is "seriously dumb."

Harsh words in a campaign for agriculture commissioner — a job so boring that even the men who have held it are hard put to say what exactly it does. Nevertheless, the race to see who gets to calibrate gasoline pumps and inspect sweet potatoes has produced the best campaign rhetoric, faux pas and one-liners of the otherwise routine 1982 Texas political season.

Hightower, 39, former editor of the liberal weekly Texas Observer, has become a kind of born-again, redneck-cum-standup comic. He says things like, "If you were to lay all the experts end to end, it would be a good thing."

His staff has nicknamed him "Whole Hog."

Thornberry, 45, is a Texas A&M alumnus and chicken expert who quotes German philospher Nietzsche in his campaign press releases. He entered the race after Hightower defeated Agriculture Commissioner Reagan Brown in the Democratic primary.

Brown, who had lost a finger when he cut it off with a chain saw while building a booth for a "Safety on the Farm" exhibition, dubbed California Gov. Jerry Brown "Moonbeam" when an infestation of California Medflies threatened Texas crops.

Brown also battled the fire ant with such religious fervor that he once stuck his hand in a fire ant hole so newsmen could get footage of the insects stinging.

Then East Texas-born Brown — speaking before television cameras shortly before the primary — twisted his tongue and referred to renowned educator Booker T. Washington as "that great black nigger."

He traveled Texas claiming Hightower's support came from "socialistic punks up East," but Hightower's pledge to save family farms and reduce supermarket prices played well, and he soundly defeated Brown.

"There's a lot more to being agriculture commissioner than putting a straw in your mouth and humming 'thank God I'm a country boy,'" goes the line Hightower used against Brown and reprised for his race against Thornberry. Hightower says he wants to use the job to influence farm legislation in Washington.

Thornberry, like Brown before him, warns that Hightower is a "political opportunist" who wants the job only as a stepping stone to higher office, and who will turn the department into "a training ground for political radicals."

Hightower, boosted by record farm bankruptcies and idled grain elevators, is considered a shoo-in over his Republican opponent, so Hightower uses the race as a kind of generic anti-Republican campaign.

"Old Ronnie Reagan is sitting up there eating caviar and sipping Cabernet Sauvignon," he tells farmers protesting rising bankruptcies and low prices. "We've had about as much Reaganomics as we can stand — 'Reaga-mortis' is beginning to set in out there in the countryside."

Says Thornberry of Hightower, "He uses many statistics, some being dead wrong and others misleading, to make the case that farmers are heading toward 'bankruptcy' and the mean middleman is taking 'an even bigger bite out of the consumer's pocket.' Hightower is dead wrong."

Hightower drew national attention when he ran a losing campaign for Texas railroad commissioner in 1978, adopting a "populist" label. He once worked as an aide to former Texas Sen. Ralph Yarborough and wrote two books on agriculture policy, "Eat Your Heart Out," and "Hard Tomatoes, Hard Times."

Thornberry calls him "a charlatan who uses the populist label to camouflage his strong ties with the AFL-CIO and with liberal agitator groups on both the east and west coasts."

Former police captain arrested in man's death

HOUSTON (AP) — A former police captain offered no resistance when officers arrested him at a hotel early Saturday in connection with the shooting of a retired businessman at a downtown Amarillo intersection, a homicide detective said.

L.R. Wynne, chief of detectives for the Amarillo Police Department until 1971, was arrested at the Ramada Inn Southwest about 12:20 a.m., said officer Ken Williamson.

The arrest came 11 hours after a gunman stopped beside a pickup driven by Erle Winston Mathis, 63, fired at least three shots from a large-caliber pistol through the pickup window, then sped away.

Mathis, a former vice president of Pioneer Production Corp., an oil and gas exploration subsidiary of Pioneer Corp., died Friday afternoon at Northwest Texas Hospital from wounds suffered in the 1:20 p.m. shooting, police said.

"There wasn't much to it," Williamson said of Wynne's arrest. He said Amarillo police notified his department that Wynne probably was in Houston.

Williamson said he did not know how or why Wynne traveled to Houston and could not say when Wynne would be returned to the Panhandle.

Potter County Peace Justice L.B. Bartlett issued a murder warrant after the shooting, naming Wynne as Mathis' killer.

Police said they believed the shooting erupted over a business deal that went sour. However, Amarillo police Lt. Jimmy Boydston said that is only speculation at this point.

"Anything I said right now would not be concrete," Boydston said. "We've got some leads but nothing very solid."

Wynne, who recently sold a security company, and Mathis were described as prominent Amarillo businessmen.

Police said the gunman fired a large-caliber revolver at least three times into the truck's window, then sped away.

A 1982 Oldsmobile Cutlass, rented in Wynne's name, was later recovered at the Amarillo International Airport where witnesses said the driver switched to a 1982 Cadillac and drove away.

Voters will decide on two property tax issues in November

AUSTIN, Texas (AP) — Voters decide Nov. 2 on two important proposed property tax collection methods — one at the state level and the second for local taxes.

Proposition No. 1 repeals the state property tax, which has been unprofitable to collect since 1980 because of a long, bitter fight over state college construction financing.

Proposition No. 3 would exempt agricultural machinery from local property taxes, a move that some state legislators say they thought they did when they passed present property tax laws in 1981.

The proposal to wipe the state property tax from the Constitution vitally affects construction and maintenance funds at state colleges and universities not in the University of Texas and Texas A&M systems. In these two systems construction is paid by income from the Permanent University Fund, which has been built up mostly from oil and gas leases on state-owned lands.

In 1956, the Legislature authorized a state levy of 10 cents per $100 valuation to help 17 state colleges outside the two systems, and it was approved by voters. The tax was challenged in court, and in 1980 the Legislature reduced it to .0001 percent, which made it unprofitable to collect.

However, in 1982, Midwestern University of Wichita Falls went to court claiming the Legislature has no right to change a tax rate that was set by popular vote in the Constitution.

The proposed change on the Nov. 2 ballot would repeal the 10 cents tax, which is still in the Constitution, and would authorize the Legislature to make general revenue appropriations to the 17 colleges for building funds.

The special legislative session in May also approved a bill, effective only if voters change the Constitution, to appropriate about $151 million to the 17 colleges for building funds.

Gov. Bill Clements has long advocated repeal of the state property tax, saying, "There is no such thing as too much tax relief, in my opinion."

Other advocates say property taxation should be left to local governments.

There have been no apparent organized opposition, although opponents during legislative debates argue the 10-cent levy should be reduced to three cents. They say this would provide plent of building money for the colleges without adding more burdens to the general revenue fund, which comes largely from sales tax collections.

The proposal to exempt agricultural machinery — "implements of husbandry" — is backed by 21 separate agricultural groups in an organization called the "Vote for 3 Committee." The late Sen. John Wilson, D-La Grange, was chairman.

Prosecution, defense ready for Wood trial

SAN ANTONIO, Texas (AP) — The goverment has wasted no time getting to the meat of its case against three people charged in connection with the alleged contract killing of a federal judge. But, neither has the defense.

During testimony by 22 witnesses over the first five days of the trial — which could last up to eight weeks — both sides have already begun develping scenarios on how U.S. District Judge John H. Wood Jr. was murdered on May 29, 1979.

Wood, known as "Maximum John" because of his stiff sentences in narcotics cases, was scheduled at the time of his death to preside over the trial of Jamiel "Jimmy" Chagra, 39, a high-rolling narcotics dealer and gambler who had just moved into a $1 million mansion in Las Vegas, Nev.

The government has spent at least $4.7 million and three years of investigating in an effort to show that Chagra — counseled by his wife, Elizabeth, 28, and attorney-brother, Joseph, 35 — decided to have Wood killed by a hit man.

Chagra, who will be tried separately and later, is charged with paying Charles V. Harrelson $250,000 to do the job.

HARRELSON, 44, was paroled from prison on Sept. 1, 1978, after serving a 15-year sentence for another hired killing. He is on trial along with his wife, Jo Ann Starr Harrelson, 41, and Chagra's wife, Elizabeth, 28.

Defense attorney Tom Sharpe Jr. says he will develop an alternate scenario for the judge's death which closely parallels the government's case, but ends with a different killer. Harrelson was involved in a "scam" to bilk Chagra and actually was in Dallas on the day of the killing, the defense attorney claims. Sharpe says he will prove it and name the real killer during the trial.

The government had one leg up before the trial started when Joe Chagra pleaded guilty to murder conspiracy in a plea bargain and agreed to testify in the current trial.

Key prosecution evidence so far includes:

— A witness, attorney Chrys Lambros, who picked Harrelson out in the courtroom as the man she saw at the Chateaux DiJon Townhomes 45 minutes before Wood was killed. Physical education teacher Elizabeth Creswell said she saw a gold car with a white top drive away shortly after the fatal short rang out.

— **A HARRELSON** associate, Hampton Robinson III, who told the jury he traveled to Las Vegas with Harrelson in April 1979 and saw Harrelson and Jimmy Chagra gambling at the same dice table. Robinson also testified that Harrelson asked him to furnish a rifle in May 1979 and later asked him to sell a white-over-gold Oldsmobile registered to "Jo Ann Starr" that the government alleges Harrelson used to get away from the murder scene.

— Kathryn Wood, widow of the slain judge, read to the jury an apologetic letter she received on Sept. 1 from Elizabeth Chagra. Mrs. Chagra Wrote that she had become a "newly born Christian" and that her husband told her he had Wood killed at the time he sent her to deliver the "payoff" in cash in Las Vegas. The prosecution alleges the person who picked up the money was Teresa Starr, 24, Harrelson's stepdaughter.

The defense has countered with these points:

— Miss Lambros' memory was enhanced by hypnotism and Sharpe was able to link her with a former government prosecutor. Miss Lambros admitted discussing her testimony prior to trial with fellow attorney Ronald "Rusty" Guyer. She said "heaven's no" when Sharpe asked her whethe she knew Guyer also was scheduled to be a witness in the trial. Sharpe elicted from another witness that Guyer, a former Assistant U.S. Attorney, prosecuted Jimmy Chagra on the narcotics charge in Sessions' court after Wood was killed.

— **BOTH MISS LAMBROS** and another witness, Mary Wilkinson, both said the man they saw skulking in a parking area minutes before Wood was shot was wearing a short-sleeve shirt. However, neither saw a large tatoo of a peacock which extends down Harrelson's right arm nearly to the elbow.

— Sharpe elicited from Robinson that Huntsville nightclub operator Pete Kay, 40, a lifelong friend of Harrelson's, offered him a .243-caliber rifle not long after Wood was killed. That is the same caliber rifle the government alleges was used to kill Wood.

Sharpe, developing his own theory of the killing in the tradition of famed Houston attorney Percy Foreman, says he will show that Jo Ann Harrelson, who lived with Kay five years before marrying Harrelson, purchased the rifle and gave it to Kay. Foreman and Sharpe worked together in the early 1970s helping defend Harrelson in three long murder trials.

by Betty Powell

There are some forms of business interruption insurance that include coverage in the event of strike by workers. These policies insure against losses that result from damage to property due to riot, civil commotion and vandalism. For instance, if employees damage plant machinery while on strike, property insurance will pay for the replacement of the damaged machinery. In this case, business interruption insurance would pay for the loss in production due to the machinery being out of commission. Another form of coverage is business interruption strike insurance which covers loss of income due to a strike. It was this policy that major league baseball owners found so helpful in 1981.

These needs of the insured have given rise to many new types of policy coverages. From individual personal requirements to particular areas of business concern, there is probably some form of coverage to reduce your exposure to liability. A professional insurance agent, such as you will find at POWELL INSURANCE AGENCY, 601 N. Marienfeld, has the experience, knowledge and resources to determine such need and acquire the protection your situation demands. We are the one-stop insurance agency in Midland. Tel. 686-2001. Open 8:30-4:30 Mon.-Fri.

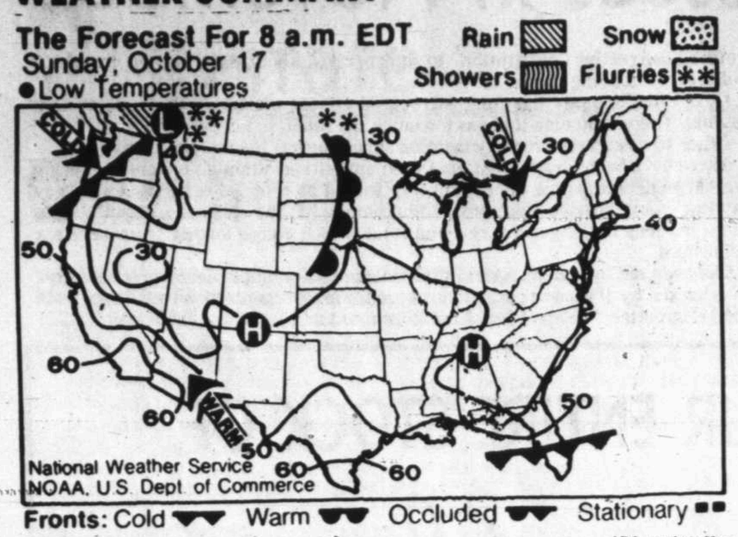
WEATHER SUMMARY



AP Laserphoto Map

The National Weather Service forecasts fair skies and cooler temperatures for the entire nation.

Summer returns to Permian Basin

Remember those chilly, rainy fall days of last week? They apparently were Midland's quota of fall weather, at least for awhile, because it's going to be warm today and even warmer Monday, according to the National Weather Service at Midland Regional Airport.

After a very pleasant 76-degree day Saturday, the NWS forecasters are calling for a high today in the low 80s, climbing to the mid-80s on Monday.

Tonight's low is expected to be in the mid-50s, warmer than the 40-degree temperatures experienced for the past week.

Winds today will be southerly at only 5-10 mph.

Saturday's 76-degree reading fell shy of the record for the date of 92 set in 1964. The record low for today's date is 36 degrees set in 1976.

No precipitation is expected in the next day or two, leaving the monthly total at 1.01 inches and the annual total at 12.63 inches.

Midland statistics

FORECAST

Fair and warmer today. High low 80s. Southerly winds 5-10 mph. Fair tonight with a low in mid-50s. Fair Monday with a high in the mid-80s.

Brutality suits increase in frequency

(Continued from Page 1A)

charge against him.

Charges of resisting arrest and illegal consumption of alcohol lodged by police last spring against Burt and Marvel Garcia, both in their 20s, were ultimately dropped by prosecutors for lack of evidence after Municipal Court Judge Jim Fitz-Gerald granted a new trial based on the brothers' contention that their original guilty plea was prompted by their fear of being returned to police custody.

Sowell had also initially pleaded guilty to the charges against him but was granted a new trial by Judge Fitz-Gerald after Odessa attorneys David Gilles and Willie Schmerler argued at a subsequent hearing that Sowell, too, feared being returned to jail, where he claims he was beaten and kicked the night of his arrest.

One of the scheduled witnesses in the Garcia brutality case, which Evans says will likely get under way by year's end, is former Midland police officer Les Harness, who is now employed by an Oklahoma oil tool company.

HARNESS SPENT five years with the Phoenix, Ariz., police force and worked for the Midland department from December 1977 to February 1979. He says his testimony will probably revolve around his claim of having personally witnessed incidents of brutality and other misconduct during his tenure with the force.

He is also expected to testify that, on the recommendation of the FBI, he and other former officers met privately with City Councilman Jesse Hatfield on two occasions a year ago and apprised Hatfield of problems in the department.

"The last time we talked to him," Harness said in a phone interview last week, "he told us that they (the city council) were looking into it and that he would probably be getting back to us and that he would bring us in front of the council so we could tell the council what was going on. But he never did.

"We talked to him about brutality and the general way people did things there (in the department). Mostly the brutality and how all of that went on — some of the coverups on different things."

HARNESS ALSO SAID that after their second meeting with Hatfield, he and one of the former officers "made a deal that if nothing came of it this time, we would just turn our backs on it and say the hell with it. There's only so much you can do. That's where we left it."

Hatfield acknowledges meeting with the men, saying he conferred with other members of the council and City Attorney Joe Nuessle about the matter and recommended at the second meeting that "they (the former officers) go to the grand jury if they had their facts and their proof together."

Paul Love, who is now a deputy sheriff in East Texas, had been with the Midland Police Department five years and was among the former officers who met with Hatfield last fall.

"He seemed halfway interested," said Love. "Like, 'I'm really for you guys. Just hang in there till I see what I can do.' I moved after that, but I understand nothing ever came of it."

A third former officer who met with Hatfield agreed that Hatfield advised them to go to the grand jury. "But," said James McFadden, who had already testified at one grand jury hearing prior to his demotion and eventual resignation from the force, "you can't get anything done (by a grand jury). Do you think a district attorney is gonna indict a chief of police?

"I LOOKED HIM (Hatfield) right in the eye and told him I wanted something done about the situation, and that if it's not done, someday it's gonna come back and I'm gonna be the first one when it blows wide open to stand up and say: 'Yeah, I told you people about what was going on and you chose not to do anything.' "

On Jan. 3, 1980, McFadden filed a $165,000 suit against the department over his demotion from lieutenant to sergeant, which, according to court documents, he believes stemmed from his grand jury appearance in May 1979. A state district judge later dismissed the case and an appeals court upheld the lower court ruling last month.

McFadden, a 16-year veteran of the force, says he resigned in June of 1981 "over the demotion and existing conditions in the police department."

He indicated the appeals court ruling would be taken to the state supreme court, but he refused to divulge the nature of his testimony at the grand jury session, which did not result in any formal allegations against anyone.

McFadden, now a para-legal for a local law firm, filed a second suit against the department this summer after he was denied access to one of the firm's clients who was being held in the city jail at the time. That suit is pending in federal court.

ANOTHER FEDERAL suit against the city accuses former police officer John Roundtree of false arrest and harassment in a case involving the theft of his wife's purse on Feb. 3, 1980.

The couple originally accused of stealing the purse, Phillip and Sharon Babcock, filed the $150,000 civil rights suit, which is also still pending, after indictments against them were dismissed by the district attorney's office for lack of evidence. Roundtree has since left the force.

Reflecting on the growing amount of litigation against the city, City Attorney Joe Nuessle said that to his knowledge only one major case — the Jezek suit — had been successful in the 25 years he's been employed by the city.

Last year, the state supreme court ended a five-year legal battle by reversing lower court decisions and awarding $1 million in damages to the family of Calvin Jezek, a 16-year-old Midland youth who died after his car collided with another vehicle at a T-intersection that was obstructed by weeds the court said should have been kept cleared by the city.

The judgement caused the city tax rate to go up by five cents, and Midland now pays about $230,000 a year for liablity coverage, according to Nuessle.

ON THE QUESTION of police brutality, he said the city recently changed the composition of the three-member appeals board that is sometimes called upon to review disciplinary action taken against city employees.

Instead of it being composed of the city manager, the city personnel director and a person of the accused employee's choice, the board — which had tended to mitigate suspensions or other disciplinary action, Nuessle noted — now consists of two city council members and someone outside city employ who is appointed, ad hoc, by the city manager.

"To me," he said, "it's added evidence that we do not have a policy, custom, scheme or plan to condone misconduct on the part of city employees. The city doesn't want employees who don't treat people equally, uniformly and courteously."

Chief Gideon echoed Nuessle, saying: "This department will not condone or tolerate any civil rights violations. Our record in regard to this is quite clear. We will immediately investigate and take whatever disciplinary action is required and suitable.

"Ninety-nine percent of the complaints I receive (about officers) are unfounded. They're just not true. As for Mr. Harness and Mr. Love, they never brought any allegations to my attention when they worked here.

"The proper place in a civilized society for the resolution of cases is in a court of law, pursuant to the substantive and procedural rules of law which bring reason to bear on the determination of cases.

"We welcome our day in court and are of the belief that once the truth has been established by credible evidence, we expect to be vindicated."

Meanwhile, said Gideon: "I appreciate the expressions of support from the many citizens of our community who say they are appreciative of the job we have been and are doing, and who wish us well."

Clements stresses White's incompetence in debate

DALLAS (AP) — Gov. Bill Clements continued to stress what he called his opponent's incompetence, while challenger Mark White harped on the state's 600,000 unemployed Saturday night during a third, and possibly final, face-to-face meeting in the gubernatorial campaign.

Both men claimed victory after the hour-long, somewhat subdued, exchange, which was hosted by KERA-TV of Dallas and beamed to nine other public television stations statewide.

Clements, a Republican, opened the debate with a list of endorsements — which he said included Texas newspapers, four former Texas attorney generals and three former Democrat governors.

"This gubernatorial election will set an all-time historic record for ticket-splitting," Clements said. "Why? Because I've been a governor for all Texans: Republican, Democrat or independent — black, white or brown."

White, a Democrat and the state's attorney general, opened with a salvo against Clements on the issues of utility regulation, the economy, education, tax increases and the environment.

He contended Clements has appointed incompetent people to the Public Utility Commission, saying "Every housewife in Texas is more qualified than Bill Clements' appointees" to the commission.

"That commission should serve as a watchdog for the consumer — and not a lapdog for industry," he said.

Both candidates accused the other of favoring an increase in state taxes.

"I think it's incredible we would even have to talk about raising taxes with $1 billion in the state treasury and 600,000 people out of work," White said.

Clements countered that his Democratic opponent was raising an "absolutely false issue," adding as an example that he did not support a severance tax on gas and would sign one into law only if a bill made it through the Legislature.

"In 1971, a gasoline tax bill never even got out of committee," he said.

Both men agreed Texas should have stricter drunk driving laws and said they would sign a bill raising the state drinking age to 21.

The governor continued stressing, "I'm a businessman — not a politician," though both men frequently accused each other of "political demagoguery."

After the debate, Clements said, "I'm disappointed my opponent never seems to come up with any solutions."

White told news reporters after the face-off that Clements has done little during his four years in office.

"The governor says he has all these task forces," White said. "We've had them for four years. We need action — not task forces."

The format was the same as used at a Sept. 24 Amarillo debate and an Oct. 11 meeting in Austin. A three-reporter panel prepared the questions and each candidate had a brief time to rebut answers offered by the opposition.

Local woman victim of 'pigeon drop' con game

By HALLYE JORDAN
Staff Writer

It was another set-up-by-a-swindler situation.

At about 10:30 a.m. Friday, Alta Mae Powledge, 73, was the victim of one of the oldest con games around.

According to police reports, Mrs. Powledge was approached by a black female, aged 30 to 35, on the parking lot of Walgreen's on Andrews Highway.

The woman, Mrs. Powledge told police, said she had found a bag of money in the parking lot and was wondering if Mrs. Powledge knew anything about it. When Mrs. Powledge said she didn't, the woman acted confused and decided to call her "boss at Gibraltar Savings," to find out what she should do.

The woman, after speaking with her "boss," whom she called "Mr. Powell," told Mrs. Powledge that he had said the women could keep the money and split it 50-50, but that they should be careful so no one would suspect anything. The woman said Powell suggested that they each go to their bank and withdraw $4,000. Then they should go to their savings to withdraw $6,000 more. Then, Mrs. Powledge was instructed, they should rent a safe deposit box where they should place their money, plus their share of the "found funds."

Gradually, Mr. Powell explained, they should return money to their savings and checking accounts, little by little.

The woman told Mrs. Powledge they shouldn't be seen together so they should take Mrs. Powledge's car and drop Mrs. Powledge off at her bank. They did so, and Mrs. Powledge returned to her car with $4,000 in 40 $100 bills. Mrs. Powledge told police that the woman talked her into placing the $4,000 in a paper sack which was placed in the trunk of her car.

The women then drove to Gibraltar Savings where Mrs. Powledge got out to withdraw $6,000. The woman said she would take Mrs. Powledge's car to go to her bank to withdraw money from checking and savings accounts and that she would return to pick up Mrs. Powledge.

Mrs. Powledge said she waited for over an hour for the woman to return with her car, and then decided to walk to her place of employment.

On her way, she noticed her car, and after looking for the woman, remembered her money in the paper sack placed in the trunk. She checked the trunk and found only the red money bag the woman had found in the parking lot of Walgreen's. The bag, from the First State Bank of Abilene, had a lock on it and was taken as evidence by the Midland Police Department. At the time of the report, the contents were unknown.

What was known was that the woman, "Mr. Powell" and Mrs. Powledge's $4,000 were gone.

"It happens all of the time," police Lt. Earl Luckey said Saturday, "but there has really been a rash of them lately."

What has been commonly referred to as the "pigeon drop" is nothing more than a group of two or three people who travel from city to city, taking in several states at a time, who trick people into putting up "good faith money" in order to share supposedly just-found money.

"We've probably had a half-dozen here in the last month and a half," Luckey said. "It's gotten to the point where Johnny Thompson (forgery investigator with the Midland Police Department) wrote letters to be handed out to anyone who comes into a bank to withdraw large amounts of cash."

The letters, Luckey explained, ask questions such as "Have you recently been approached by someone who has found money and offered to share it with you?" At the end, it states something to the effect that if any of the above questions can be answered affirmatively, the person is probably going to be the victim of a pigeon drop.

Catching the swindlers is difficult, he said, because they are always from another town.

"They never hit in their hometown," he said.

Glemp criticizes martial law

WARSAW, Poland (AP) — Roman Catholic Primate Jozef Glemp, his voice rising with emotion, criticized martial law authorities Saturday for ignoring the "voice of society."

Meanwhile, riot police patrolled a Krakow suburb where street clashes erupted three nights running, sweeping away flags, flowers and other memorials to a worker killed in the unrest.

Clark Todd, 38, London bureau chief of the Canadian television network CTV, was arrested in Nowa Huta and ordered to leave Poland by midnight Sunday, the Canadian Press reported Saturday from the Krakow suburb.

It quoted Todd as saying he was arrested Friday night while covering the unrest and held for five hours until his visa, issued before the imposition of martial law, was declared invalid.

Speaking at the All Saints Church in Warsaw, Glemp said Poles had hoped since martial law began last Dec. 13 for "agreement and genuine accord," but wound up without unions and the prospect of starting "from zero."

"That happened without any consultation with the working people!" the archbishop said. "Doesn't the strength of the state rest in cooperation between the authorities and society, on the condition the authorities are not deaf to the voice of society?"

Some witnesses said the strong theme of the sermon was a departure from the moderate line Glemp has followed this year.

Bush campaigns for Republicans in Pecos, praises presidential job done by Reagan

(Continued from Page 1A)

water" in his veins, the president is a man of compassion. Reagan is determined to right the economy, which, Bush said, fell into bad times under Carter's administration, when interest rates rose from 6.25 percent to 21.5 percent and inflation shot up from 4.8 percent to 12.4 percent. Under Reagan's influence, Bush said, the prime interest rate has dropped from 21.5 percent to 12 percent, and "inflation now (at 5 percent) is so much better."

"We passed two great tax cuts...and two successive budget cuts and cut the growth of federal spending in half."

Among efforts to revitalize the economy, the president proposes to change the clean-air act to allow more industries to rekindle and become prosperous.

"We do care," said Bush, who affirmed that the administration doesn't believe in implementing the Public Works Programs but rather wants the private sector to build up and again make the economy strong.

In culling through the bureaucracy, the administration is "determined" to lift the burden of excessive federal regulations and to return control to the American people, "and," Bush said, "we are succeeding."

In his plug for Haggerty, who is seeking to succeed Congressman Richard C. White of El Paso, Bush said the Republican candidate would "battle for his Congressional District," which spans from El Paso to Odessa, even though he may have political differences with the president. 'West Texas Texans are independent," he said.

Bush also lent his support to Midland's Ernest Angelo Jr., who is running against Democrat Bill Sims for the Texas Senate; to Jim Collins, who is trying to oust U.S. Senator Lloyd Bentsen Jr. from his seat in the nation's capital; and to Texas Gov. Bill Clements, whom Bush said he "desperately" wants re-elected. Clements is opposed by Texas Attorney General Mark White.

Bush, who is campaigning for GOP candidates across the country, flew into the Pecos Municipal Airport, a former U.S. Army Air Corps flight school, in a Lockheed C-130 Hercules aircraft, painted olive drab, and was protected by federal agents, including Secret Service personnel, and state, county and city law-enforcement officers.

The show of interest in Bush at the airport and at the hangar apparently was the largest since the Soviet Union minister for natural gas flew into Pecos several years ago to inspect gas plants, said Airport Manager John N. Varner.

"That was quite a to-do," he said. "They said he put his feet on the ground three times — in California, Houston and Pecos."

Among the horde of spectators was Laura Teaf of Pecos.

"Are you a Republican?" a reporter asked her.

"I like to consider myself an American," she said evasively, and later added, "I'm an American first and Texan second."

EDITOR'S REPORT

(Continued from Page 1A)

without solving the things that caused it — the out-of-control government spending, the skyrocketing inflation and interest rates that led to high unemployment in the first place."

"The problems we face are bigger than any one party or group of people. They are the result not of weeks or months but of years — even decades — of past mistakes. The problem isn't the who to blame, it's what to blame. So tonight let's forget politics and take a look at how our country got into this fix and what we can do to take her out of it."

Naturally, politics cannot be completely ignored three weeks before Election Day. But the president's remarks were less partisan than what many observers anticipated. In his campaign swings around the country President Reagan openly endorsed Republican candidates. His televised speech from the Oval Office showed him to be the elected president of all Americans.

The "blame game," as the president characterized it, can be played by any two competing politicians. Democrats blame him for recession and unemployment while Republicans tend to swipe at Democrats for their previous big-spending programs. President Reagan told us that we must stick to fundamentals that made America the greatest country in the world and only then will Americans realize their dreams.

He zeroed in on basic problems and essential solutions. Taxing and spending, as have been the zig-zag pattern for decades, said the president, are not the solution. But cutting spending and balancing the budget require priority attention. That's why he is calling Congress back for a session right after the elections to deal with these issues, he declared.

During months of campaigning for the Republican presidential nomination and subsequently as the nominee, President Reagan repeatedly outlined these courses he so ably advocated on TV. Right through the first 21 months of his presidency, he didn't duck what he pledged in the campaign. A key phrase in his address to the nation was imprinted indelibly: "Staying the course." These are words to remember. They mean fighting inflation with all the weapons at our command. Bringing down high interest rates, which have occurred prceptibly, is another. Unfortunately, reducing unemployment, as President Reagan noted, always lags behind once recovery begins. We've licked inflation, driven down interest rates. The president's confidence in America and its will is super.

Just think of what happened to countries of recent memory when leadership failed and people panicked. In Germany after World War I, wheelbarrows were needed to carry wads of currency printed by the hour to buy groceries. After World War II, Hungary went on a money-printing binge when a currency unit, the pengoe, soared to five trillion to the dollar. A haircut cost 10 trillion pengoe. The middle classes of Germany and Hungary were wiped out by this runaway inflation and barter became the exchange system. These are the most horrendous cases of wild inflation, which would have gained momentum here unless checked.

Then there's the plight of present-day Britain under the conservative leadership of Prime Minister Margaret Thatcher. It was in an economic mess similar to the one President Reagan inherited. Prime Minister Thatcher, "The Iron Lady," brought down inflation from 22 percent to 7.5 percent. Unemployment went up to 13.3 percent in a nation of 56 million. Mrs. Thatcher, at mid-term as is President Reagan, absolutely refuses the option of printing money. She is tough — and popular.

It always has been interesting to me that the Democrats do not dare take on President Reagan by name. He is by far too popular for the critics to attempt anti-Reagan attacks. They resort instead to going after individual pro-Reagan candidates and administration economic policies.

President Reagan isn't even halfway through his term of office and his policies to make the country vibrant again are just beginning to make an impact. He needs more time and all of us who voted him in should give it to him. The Reagan record speaks for itself.

Bottle of mouthwash spiked with acid

CLEARWATER, Fla. (AP) — A bottle of Lavoris mouthwash that gave a tourist minor mouth burns contained an acidic substance and may have been spiked in the store where it was purchased, police said Saturday.

Jim Balzotti, 29, of Pembroke, Mass., was released from Morton F. Plant Hospital on Saturday after treatment for burns. He had taken a swig from a six-ounce bottle of Lavoris and spit it out without swallowing, authorities said.

Hospital officials tested the remainder of the mouthwash and found "an acidic type substance of some kind," Lt. Wayne Meissner of the Clearwater police said Saturday. "But we don't know what kind of acid."

Seven people died two weeks ago in the Chicago area after taking capsules of Extra-Strength Tylenol that were laced with cyanide and the deaths sparked widespread appeals for tamper-proof medicine packaging.

"According to information released by the police department, it appeared the bottle may have been tampered with locally and acid added," said Malcolm MacGruer, a spokesman for Richardson-Vicks Inc. of Wilton, Conn., which makes the red, cinnamon-flavored mouthwash.

"A complete investigation is under way," MacGruer said.

MacGruer said the company also would run its own tests.

Balzotti purchased the Lavoris from an Albertson's Supermarket outlet in Belleair Bluffs, police said.

Political ads aren't 'Texas news'

Editor's Note: Do political ads on radio and television tell the listener the truth? Are they misleading, or merely clever? Most of the time it's hard to tell.

By KEN HERMAN
Associated Press Writer

AUSTIN, Texas (AP) — The voice on the radio says "This is Texas news," but it's not.

Elsewhere, a candidate on television tells you his opponent said there's not a housewife in Texas qualified for the Public Utility Commission, but that's not quite what the opponent said.

When it comes to political ads, what's misleading and what's not? It's a matter of whose candidate is being gored. Your opponent's ads are misleading. Yours are clever.

Campaign officials in the Mark White and Bill Clements camps have no trouble finding the opposition's misleading ads.

A Clements ad crediting the governor with getting pay raises for teachers upset White workers and backers. Fita Flores, a Laredo school librarian, quickly raised $108 to pay for once-a-day, one minute ads — at $9 each — on her local radio station to counter Clements' multimillion-dollar campaign.

"We wanted to give our version about what Clements has not done for education," said Mrs. Flores, whose ads are independent of Democrat Mark White's campaign for governor.

Officials at White's Democratic gubernatorial campaign also are peeved at a Clements radio spot that sounds like a newscast. It opens with traffic sounds and a man complaining, "This traffic's a real mess." A woman replies, "I'm sure it'll clear up in a minute, dear."

THE NEXT PORTION of the ad is a simulated newscast. An announcer says, "This is Texas news. Attorney General Mark White today was severely criticized by the 5th Circuit Court of Appeals for failing to represent the state of Texas adequately in a major case on bilingual education..."

David Lindsey, White's press secretary, said it sounds so much like a newscast that White workers were fooled when they tried to record it.

"It slipped right by them a couple of times because they thought they were listening to the news. That's deceptive," he said.

Jim Francis, Clements' campaign chief, says there's nothing wrong with the spot, which he called a "catchy little ad with a clear disclaimer." It's also a fair account of a court's criticism of White, he said.

"It was framed on both sides with background noise. It's obviously an ad," he said.

The ad ends with Clements quickly reciting the required paid political ad notice.

Dwayne Holman, White's campaign manager, says the ad will backfire.

"When people catch on to what the ads are, they feel like they've been tricked. When you really try to fool people you run a big risk. When they figure out you tried to trick them they really resent it," he said.

THE CLEMENTS SIDE is complaining about several White ads, including a television spot lambasting Clements for his comment that he didn't know any housewives qualified for the Public Utility Commission.

"He takes a quote out of context," said Francis.

A transcript of the interview shows Clements was asked if it would be "appropriate to put a consumer" on PUC. Clements said no.

AP Laserphoto

Gov. Bill Clements has drawn criticism from the opposition for publishing the Texas Spectator, a tabloid newspaper-like campaign advertisement. The Spectator includes stories saying Mark White has messed up major cases as attorney general.

"Because I want people on there who understand the business of the utilities and the consumer and the economic situation in Texas. And I don't know of any housewives that are qualified in the sense that I am talking about. If you do, please send me their names," Clements told a Galveston reporter.

Francis said Clements merely was saying was he did not know a housewife qualified for the complicated commission job. White's ad, charging the governor's comments show an insensitivity for ratepayers, is misleading, says Francis.

The difference between fair and misleading can be even more subtle.

Lindsey and Holman said Clements is trying to mislead voters into thinking the governor is a nice guy.

"The Grandpa Greenjeans stuff," Lindsey called it, referring to a television spot showing Clements, dressed casually, seated near a bale of hay and talking about his life.

"SURE IT'S MISLEADING," said Lindsey. "He's not a nice man and people don't perceive him to be a nice, warm, cuddly figure. He's tough to the point of being abrasive sometimes."

Holman, referring to Clements' comments about growing up during the Depression, said, "He may have grown up during the Depression, but he still graduated from Highland Park High School."

On the GOP complaint list, Francis says White is misleading voters about his record. The Clements campaign has made White's record a major issue, claiming he is incompetent. White responded with ads saying he has won 31,000 cases.

That may be true, said Francis, but about 28,000 were uncontested, routine matters.

"It's like drawing up somebody's will and saying you won the case," he said.

Perhaps the biggest stir was created by the Texas Spectator, a tabloid newspaper published by the Clements campaign. The paper included an account of White's 1963 DWI arrest.

"He showed his talent early. White blames tobacco for big car crash; Cop counts three bottles," said the headline.

Turkey always costliest

HOUSTON (AP) — A print of John James Audubon's painting of the great blue heron sold for $26,000 Saturday, failing to break a price record set the previous night when an Austin physician paid $32,000 for the naturalist's depiction of a male wild turkey.

"That rather restores the order," auctioneer Nicholas Stogdon said. "Traditionally the turkey's always been the most expensive."

Stogdon declined to release the buyer's name immediately.

Dr. C. Dale Parker set the new price record Friday night. He paid $35,200 including the seller's premium. The great blue heron had brought $33,000, including the premium, at a 1980 sale in New York, where the turkey sold for only $20,000, Parker said.

The auction of 291 of the 434 hand-colored engravings, made between 1827 and 1838 for inclusion in Audubon's folio "Birds in America," had raised about $900,000 by mid-afternoon Saturday, Stogdon said.

Officials of Christie's, the art firm conducting the auction, had predicted the sale would bring between $800,000 and $1.2 million.

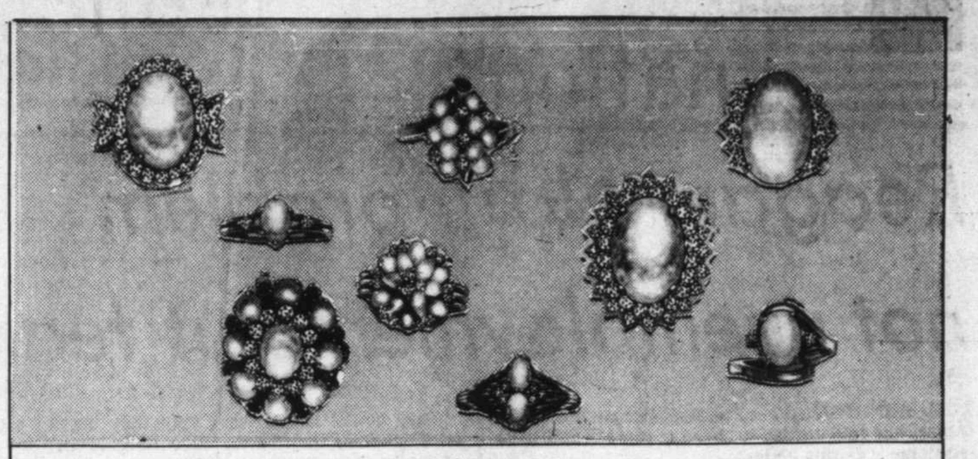
"We had quite a lot of spectacular prices," Stogdon said. Both the Louisiana heron and the Canada goose brought $20,000.

The long-billed curlew print, which showed the city of Charleston, S.C., in the background, was sold for $19,000, Stogdon said. The snowy heron — "with a portrait of John James himself" — sold for $18,000.

The 27-by-40-inch prints are being sold by the Delaware Art Museum. The engravings were given to the museum by Francis V. DuPont.

Robert Seaver, coordinator of sales outside New York for the auction firm Christie's, said about 165 complete sets of the folio were made and approximately 130 are known to exist. He said 420 of the prints in this set had never been bound or trimmed for inclusion in a book.

The turkey is the first picture in the folio. It and the great blue heron are among four birds which each cover an entire plate.



Come see the magnificent Grand Opal Showing.

OCTOBER 18th-30th

The Grand Opal Showing is an exciting event. More opals than most people see in a lifetime are all gathered for one spectacular show and sale. All these opals and even more will be waiting for you at this show. But with a show like this, for only one week, there's no time to waste! With diamonds in 14 karat gold priced from $125 to $4,200. All merchandise subject to prior sale.

Reagan: No.1 problem not unemployment but fear

WASHINGTON (AP) — President Reagan told jobless Americans on Saturday to "hang in there" because the economy is getting better.

Reagan accused opponents of his program of exploiting the fear that comes in troubled times, and he recalled the famous line from Franklin D. Roosevelt's 1933 inaugural address, "The only thing we have to fear is fear itself."

In his weekly radio address, which itself is reminiscent of Roosevelt's broadcast "fireside chats," Reagan said, "Unemployment such as we have now is a terrible thing, but it may not be our No. 1 problem. Our No. 1 problem may be fear — fear that we're adrift, that there is no plan, that no one is doing anything to make things better."

"Hang in there," said Reagan, who graduated from college and went looking for work in the depths of the Great Depression. "I know from personal experience how tough it can be, but don't give up. The time for confidence, the time for courage, is now."

Although he said he didn't mean "to minimize the very real plight of the unemployed," Reagan suggested the government's jobless figures may not be as bad as they appear.

"When we're told over and over again, as we have been in the last few days, that as of Sept. 25, 682,500 new claims for unemployment insurance were filed," Reagan asked, "shouldn't we also be told that at the same time, 618,000 left the list?"

Although the Labor Department's weekly claims figures do indicate that 618,000 people left the unemployment compensation rolls that week, that does not mean they found jobs. Some may have gone to work, but most simply exhausted their regular 26 weeks of unemployment compensation checks and ceased drawing benefit checks. The department's weekly publication of new claims figures, however, does not survey those leaving the relief rolls to determine why they stopped getting benefits.

Reagan cautioned his audience not to listen to his political opponents, whom he called "those crepe hangers who are howling like a dog sitting on a sharp rock."

"They howl," Reagan said, "but they haven't proposed one thing they'd do to make things better.

"The truth is things are being done, with no help from them, and things are getting better."

Giving the Democratic response to Reagan's speech, Sen. Bill Bradley of New Jersey acknowledged that interest rates and inflation have fallen, but said the price has been too high.

"Businesses are failing at the fastest rate in 50 years," he said. "Over 30 percent of our nation's productive capacity lies idle. Most companies have slashed their capital investment budget. So much for rebuilding America.

"And 11 million Americans are out of work. That's more Americans unemployed than at any time since the Great Depression, and those are not statistics, but men and women suffering because they can't find a job. In contrast to the 19 million new jobs created in the 1970's, over 3 million Americans have moved to unemployment lines in the last 13 months."

Speaking from Camp David, his mountaintop retreat in Maryland, the president told his listeners, "Thanks to you, we're nearing the end of a long and painful ordeal."

"As for the 11 million Americans still out of work, they will find jobs as the economy continues to heal," he said.

"We've already floored inflation and sent those high interest rates reeling," Reagan said, "and as surely as single-digit inflation started those interest rates tumbling, getting those interest rates back down to single digits will drive unemployment back down to single digits, too. Once we've done that, we will have delivered a knock-out blow to this recession."

Bradley said he and other Democratic senators are advocating "a sweeping tax reform that would make our income tax system fairer, simpler, and more efficient, with fewer loopholes and lower rates for all Americans."

"And the best way to get the deficits down is to put people back to work with a maximum investment not only in plants and equipment but also in people," he said.

Peso crisis puts California town on the skids

CALEXICO, Calif. (AP) — This wealthy little city with its quaint stores was built on trade with Mexicans across the border, but the peso crisis is causing shuttered shops, record unemployment and fears of even worse times ahead.

"People here are just hanging on by the skin of their teeth," said Bill Polkinhorn, a city councilman and merchant in the desert city.

Since Aug. 4, the date of Mexico's second and largest peso devaluation of the year, Calexico, population 14,000, has been skidding toward financial disaster.

For decades, Calexico cashed in on commerce from the city across the border, Mexicali, Mexico, which has 1 million people.

Mexicali shoppers with border-crossing documents flooded Calexico's tiny downtown and made it a retail oasis for American merchants.

But after devaluation, Mexicans found their buying power cut drastically and the Mexican government stopped its citizens from buying dollars legally.

"People could have lived with the devaluation, sooner or later you adjust," Polkinhorn said. "But the fact that the Mexicali people can't get their hands on dollars is killing us."

He estimates that sales have plummeted 45 percent among Calexico's 340 merchants.

A dozen establishments have been forced to close, including five in the last two weeks, according to Carmen Rojas, manager of Calexico's Chamber of Commerce.

"The county's gone economically," Rojas said. "The town could get awfully small."

More than 550 retail-related jobs have been lost since August and the town has about 1,200 to 1,500 people still working, said Angel Somera, manager of the Employment Development Department office.

Hardest hit was the giant Fed-Mart shopping center, which has laid off upwards of 110 workers, more than half its work force.

Unemployment in Imperial County has doubled in the last five years and now stands at 39.6 percent, an all-time high for California's 58 counties.

In 1972, Calexico led California in per capita retail sales, with stores doing $37 million worth of business. That sum skyrocketed to $138 million in 1981.

Polkinhorn, who is 39 and a lifelong resident of Calexico, operates an international custom house that specializes in commercial trade between the two countries.

To him, all signs indicate another devaluation and another catastrophic jolt for Calexico.

"I don't think we're on the verge of becoming a ghost town," he said. "But I see the population dropping in half.

Cities hitting bottom of barrel, says report

WASHINGTON (AP) — The nation's cities have just about reached the bottom of the tax barrel, while the prices they pay for everything from paper clips to squad cars keep going up, according to a congressional study.

A staff report prepared for the Joint Economic Committee and released on Saturday said that during the past three years, city budgets have been low on resources while spending pressures mounted.

"This year the pressures are evidently more intense," the report said. "Perhaps the most disturbing finding...is that for 1982 cities are projecting virtually no growth in revenues.

"For cities of all sizes, revenues are expected to increase by an average of only 1.3 percent," the report said. "At present rates of inflation, this would mean a reduction of approximately 6 percent in real terms.

"At the same time, however, current expenditures are projected to grow at an average of 7.8 percent, about equal to the anticipated rate of inflation," the staff reported. "As a result, cities are increasingly subject to cash squeezes and current deficits."

The Consumer Price Index for August, the last month for which it is available, showed inflation for the first eight months of the year at an annual pace of 5.1 percent.

The report said that two out of every five cities surveyed reported their operating expenses and payments on debts exceeded their income in 1981, and 59 percent are projecting deficits for this year.

Although the highest proportion of cities running deficits is found among the larger cities, the fastest increase in distress is among small cities, the report added.

Coloradoans care more about issues

DENVER (AP) — Using dollars as a yardstick, Coloradans care less about who they send to Congress than about two controversial ballot proposals — to allow wine sales in grocery stories and to require a deposit on beverage containers.

Campaign contributions have exceeded $1 million in both ballot-issue contests, according to a report covering donations through Oct. 8. No congressional candidate had raised more than $275,000.

The group backing the proposed nickel refund on beverage containers has raised $499,169, primarily through small personal contributions, in support of Amendment 5. The opposition — Coloradans for Voluntary Recycling — has raised $683,000, including large contributions from the beverage industry.

With help from supermarket chains and grocery stores, backers of legalized wine sales in groceries raised $796,907.

Their opponents — financed in large part by liquor wholesalers and retail liquor stores — have raised $495,622, most of which has been spent on an intensive television advertising campaign denouncing the proposed Amendment 7.

Cranston doesn't want second spot

ORANGE, Calif. (AP) — Sen. Alan Cranston says that although he now trails two Democratic rivals in public opinion polls, the race for the 1984 Democrtatic presidential nomination is "wide open."

Cranston, who serves as Senate Democratic whip, also says he has "no interest" in the vice presidential nomination.

Stumping for local Democrats in Orange County last week, the three-term California senator acknowledged that Sen. Edward M. Kennedy, D-Mass., and former Vice President Walter F. Mondale are the frontrunners.

"Those early polls don't mean anything," Cranston said, adding that he'll formally announce his plans for 1984 after the Nov. 2 election.

In the past 18 months, Cranston has campaigned in 33 states and formed a committee to assess his chances of capturing the nomination. He already has raised $250,000.

Poll shows Chafee leads Michaelson

PROVIDENCE, R.I. (AP) — Incumbent Rhode Island Sen. John Chafee holds a 14 percentage-point lead over Democratic challenger Julius Michaelson in a poll taken by a Providence television station.

WLNE-TV reported their poll conducted between Oct. 4 and Oct. 7 gave Chafee 47 percent of the vote to 33 percent for Michaelson. The remaining 20 percent of those questioned said they were undecided.

The station said 836 registered voters were questioned in the telephone poll, which 3 percentage point margin of error.

Reagan appeals for Fenwick aid

TRENTON, N.J. (AP) — President Reagan sent a direct mail appeal to Democratic candidate Frank Lautenberg, asking that he donate money to Rep. Millicent Fenwick, his Republican rival in New Jersey's Senate race.

In a form letter sent to Lautenberg's home in Montclair, Reagan made an appeal for financial assistance to the millionaire businessman. The letter indicated it was paid for by the "Republican Senatorial Committee."

"Please send the most you can," Reagan said. "Millicent faces a Democratic opponent with huge personal cash resources. He's prepared to throw over $3 million into the race against her."

Larry Rosenshein, Mrs. Fenwick's campaign director, said Lautenberg's name was placed on a mailing list of 60,000 state residents because he once contributed $1,000 to Republican Sen. Rudy Boschwitz of Minnesota.

Lautenberg has acknowledged Boschwitz is a personal friend.

Fire breaks out in small plane

PALM SPRINGS, Calif. (AP) — A fire broke out in the cockpit of a small commuter airline, burning a saucer-sized hole through the craft and resulting in the injury of one passenger, officials said.

Cindy Brannon broke her ankle when she jumped to the ground during evacuation of 16 passengers and two crew members from the Sun Aire turbo-prop Friday night, said Sun Aire President Mike Di Giorgio.

The Merlin Metroliner had received clearance for takeoff from the airport tower when the fire broke out, a tower official said.

Airport personnel put out the blaze before the fire department arrived. There was no disruption of airport traffic or damage to airport facilities, officials said.

Parachutist dies during jump

LANCASTER, S.C. (AP) — A 37-year-old man was killed when he parachuted into trees during an exercise at a Soldier of Fortune convention, law enforcement officers said.

David Bernhardt, of Oklahoma, no hometown available, was killed Friday when a branch slashed his throat, officials said, adding that he was an inexperienced parachutist.

The death, which occurred as he jumped with several other people, was the first in the convention's three-year history, officials said.

Lancaster County Sheriff Nae Parks said a group spokesman for the convention told him the parachute had worked fine.

Murder suspects may be in Mexico

PATAGONIA, Ariz. (AP) — Authorities say they believe two suspects in the slayings of a ranch foreman and his assistant have crossed the border into Mexico.

"They just got too far ahead of us," Santa Cruz Sheriff Jaime Teyechea said after a search was called off Friday night. "I'm convinced they had a 13-to-14-hour head start."

The bodies of Salero Ranch foreman James Thomas McGrew and ranch hand Fernando Estrada were found Thursday beneath a bulldozer near a line shack on the 26,000-acre ranch 15 miles northwest of Patagonia. Each man had been shot once in the chest.

Two sets of footprints were found leading from the area.

Commuter train soon to roll

LOS ANGELES (AP) — The first Oxnard-to-Los Angeles commuter train will roll out of Oxnard before dawn Monday, marking the beginning of what officials hope will become a successful alternative for automobile-conscious Southern Californians.

Dubbed CalTrain, the 50-mile commuter operation will make two round-trips daily Monday through Friday.

The trains, which will run over Southern Pacific railroad tracks, will leave Oxnard at 5:30 a.m. and 6:40 a.m., making stops to pick up passengers in Simi Valley, Panorama City and Glendale before reaching downtown about 2 hours later. The trains will carry commuters home from Los Angeles at 4:49 p.m. and 5:41 p.m.

Lab's priority space exploration

PASADENA, Calif. (AP) — Space exploration will remain the top priority for the Jet Propulsion Laboratory, and scientists there will steer away from excessive defense work, the new head of the lab says.

Retired Gen. Lew Allen Jr., a physicist and former Air Force chief of staff, said Friday the facility will take on additional national security work only if the JPL can make a unique contribution.

Man frees trapped trucker

INDIANAPOLIS (AP) — A former weightlifter helped rip the steering column from the cab of a burning truck and freed the trapped driver minutes before flames engulfed the cab, police said.

"I was scared to death," said George L. Winkleman, 29, of Morristown, who pulled his own truck across two lanes of Interstate 70 traffic Friday to go to the aid of John Perry, 39, Dayton, Ohio.

Winkleman pulled his rig to the curb, ran to Perry's overturned semi and began tugging on the door.

"I could see the flames come up around his face," he said. "I didn't want to see this man burn."

The door was pulled off with a chain attached to another truck, and Winkleman wrapped a chain around the steering column so it also could be pulled away from Perry.

Police said Perry veered into the median of the interstate to avoid another motorist, and his truck hit a drainage ditch, tipped over and burst into flames.

Winkleman said he knew as he was slowing his rig the other trucker was trapped, and noticed small flames emerging from spilled fuel.

"It was just a snap thing. I saw the thing turn over, and I stopped," he said.

State police said the rescue took about five minutes.

Afterward, Winkleman got back in his truck and went to work.

"They were calling me a hero or man of the hour. It makes me feel funny," he said.

Perry was listed in critical condition in Methodist Hospital with second-and third-degree burns.

Court: Boy to blame for own death

ATLANTA (AP) — A teen-ager who was accidentally shot by a park ranger while "streaking" through a campground was partially to blame for his own death, a federal appeals court ruled.

The 11th U.S. Circuit Court of Appeals on Friday upheld U.S. District Judge Dudley Bowen Jr.'s award of $65,586.91 to Janet and James Harden, of Augusta, the parents of Clay Harden, 15. The parents sought a larger award.

Bowen ruled in 1980 that the government was negligent for the actions of ranger Paul Strang, who killed the teen-ager Sept. 4, 1977, but reduced the damages awarded by 25 percent.

The appeals court agreed with the reduction, ruling that Clay was partly to blame for his death because he was indecently exposed and disturbing the peace and failed to respond to a warning shout by Strang.

Clay joined more than a dozen other boys in a group initiation rite at the Ridge Road Campgrounds at Clarks Hill Reservoir, where the boys stripped and ran through neighboring campsites, according to court documents.

Strang, a 57-year old Augusta schoolteacher and part-time ranger at the time, went to the area after hearing complaints from frightened campers.

Newest attack sub launched

NEWPORT NEWS, Va. (AP) — The nation's newest attack submarine, the Salt Lake City, was launched Saturday when Kathleen Garn, wife of Sen. Jake Garn, R-Utah, smashed a bottle of champagne against the submarine's hull and the vessel slid into the James River.

The $340 million nuclear-powered submarine, built at Newport News Shipbuilding & Dry Dock Co., is the 21st of the Los Angeles class of submarines. It is scheduled to be delivered to the Navy in early 1984, after outfitting and sea trials.

Siamese twins lead more normal lives

CLINTON, Utah (AP) — Lisa Hansen flipped over a playing card and shouted, "I win!" at her blue-eyed twin sister Elisa, sprawled out beneath a color photograph showing the pair prostrate with their skulls fused together.

Their beaming father, David Hansen, sat next to them, recalling the pioneering surgery that separated the girls three years ago and — as they prepare to celebrate their fifth birthday Monday — has made their existence more normal.

"It's hard to imagine now that they were even joined together when they were born," he said. "When they were born, we never thought they'd get this far. It's amazing."

The twins were born Oct. 18, 1977, conjoined at the head, an event that might occur every 2½ million births, Hansen said.

Two years later, after 16½ hours of painstaking surgery in which physicians tied off sheared blood vessels and severed a small section of brain shared by the two, Lisa and Elisa were separated.

THERAPY HAS followed, helping the blonde-haired girls combat slight paralysis on the sides of their bodies caused by removal of a tiny part of brain tissue.

Their recovery has varied. Elisa walks with a limp on her right side, but Lisa, on the verge of walking a year ago, has regressed.

Lisa, who also wears glasses, must crawl or get around in a specially designed orthopedic wheelchair. She undergoes therapy weekly, but the Hansens are uncertain if she ever will walk.

"It could be soon, it could be never," Hansen said. "No one really knows."

Both wear padded bonnets to protect the membrane-thin area on the tops of their heads where they have no skull.

The twins, however, have suffered no mental impairment, Hansen said. Both are enrolled in kindergarten, Lisa in a special education program at a Layton school and Elisa at a public school near their home in this community 30 miles north of Salt Lake City.

"They're both smart kids, but they're about a year behind because of the operation," said their 25-year-old mother, Patricia Hansen.

THEIR PERSONALITIES also differ. "Basically, they have no similarities," Mrs. Hansen laughed.

Elisa, who strode about the family home bantering with several friends during an interview, is aggressive and outgoing.

"She's almost like a little dictator," said Hansen, who owns an ice cream distributorship. "She orders people around and it can be embarrassing."

Lisa, however, is more passive. "If you give her a book or her dolly, she'll be content for hours," Hansen said.

Lisa and Elisa enjoy each other's company, sometimes slipping into each other's bed at night to cuddle.

"If you punish one, the other one will come over and hug her," Hansen said. "It makes you feel like a heel."

THE TWINS pass the time at home playing with dolls, with their sister Shaylyn, 3, or entertaining dozens of friends who come to visit daily.

The Hansens say their daughters have been accorded a special respect from their peers and spared cruel stares or comments.

"I think the ignorance is more with people our age," said Hansen, who is running for Davis County Treasurer as a Democrat.

The Hansens also have formed a special friendship with the parents of two other Siamese twins in Chicago born after Lisa and Elisa. The children died, but Mrs. Hansen regularly telephones the mother.

The Hansens also occasionally visit the mother of twins born to a Montpelier, Idaho, couple. One of those twins later died.

"We're a small club and an exclusive one," Hansen said.

The twins were separated May 30, 1979, by physicians at the University of Utah Medical Center, many of whom donated their time.

THE GIRLS have accrued medical bills in excess of $250,000, some of which were paid by Medicaid. Hansen said he has paid everything over a fixed amount of his salary each month to the Utah Department of Social Services to offset medical costs.

The family was dropped from the program about a month ago, apparently because of a bureaucratic foulup, Hansen said. He has reapplied. Lisa will continue therapy, however, because of the fund-raising efforts of a local singing group.

Lisa must have further cosmetic surgery on one ear, underdeveloped at birth. Both also are awaiting skull surgery to implant bone tissue where they were separated.

The Hansens are guardedly optimistic about their daughters' future.

"I so badly want them to be like all the other neighbor kids," Mrs. Hansen confessed. "I want them to be one of the group and not have to sit on the sidelines."

"But the thing I keep telling myself is, I never dreamed they'd get this far," said Hansen. "We're not complaining."

Westwood Medical Clinic

A New Concept In Medical Care

...serving the needs of a growing community.

Quality Medical Treatment is readily and reasonably available at Westwood Medical Clinic in Midland.

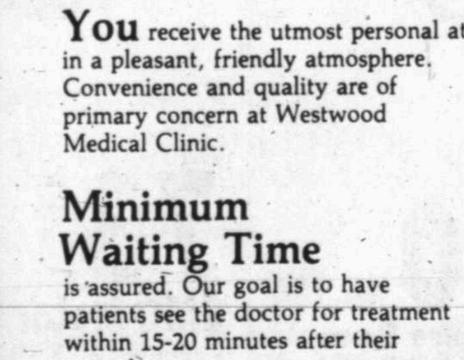
You receive the utmost personal attention in a pleasant, friendly atmosphere. Convenience and quality are of primary concern at Westwood Medical Clinic.

Minimum Waiting Time is assured. Our goal is to have patients see the doctor for treatment within 15-20 minutes after their arrival.

Equipped with the most modern diagnostic, X-ray and laboratory equipment, the clinic also has private treatment rooms and special rooms and equipment for applying casts, suturing and treating illnesses/injuries.

Examinations are also conducted for school, college, pre-employment, D.O.T. and other state and federal licenses, premarital and life insurance. Free Blood Pressure checks and diabetes screening are also available.

Charges are generally comparable to an office visit and usually much less than at a hospital emergency room.



An Alternative to the hospital emergency room and a private physician's office, the clinic offers advantages of both.

No Appointment is ever necessary at the clinic which is open extended hours; from 10:00 a.m. to 7:00 p.m. Monday through Friday.

Staffed at all times by a licensed physician, a nurse and other qualified ancillary personnel, these professionals respond immediately to your specific medical need.

Medical Treatment is available for cuts, lacerations, sprains, fractures, dislocations, chest pains, flus, sore throats, childhood diseases, accidents and job related injuries of all types. However, life-threatening emergencies (such as severe trauma automobile accident victims, etc.) are encouraged to go directly to a hospital emergency room where full back-up services (such as blood banks and operating rooms) are available.

Insurance Claims are easy to fill out and file since an itemized statement is supplied to each patient for reimbursement.

Larry Van Dyke, also known as Larry Gardner, left, stands with Police Inspector Robert Burke, who acted as a liason between Van Dyke and the police negotiating team and the press after his surrender Saturday morning. Van Dyke took five people hostage and holed up in a Brooklyn, N.Y., hospital keeping police at bay for 46 1/2 hours.

Media plays big role in hospital hostage crisis

NEW YORK (AP) — Almost as soon as Larry Van Dyke grabbed a gun and took five hostages at Kings County Hospital in Brooklyn, he made the media participants in a drama that was to last 46½ hours before he surrendered to police.

When Van Dyke told police he wanted to talk to a news reporter, everyone assumed the convict wanted to see a television reporter; that's the usual pattern in this city of nearly a dozen local and national outlets.

But the gunman wanted to talk to Bella English, a reporter for the Daily News with whom he had talked several years ago and whose writing he "admired."

Later, Van Dyke let it be known he had a message to get across and was going to use radio and television.

It began to be clear Van Dyke had decided his would be in part a public negotiation. Police also made it clear that they would appreciate it if the media would help out.

AS POLICE Lt. Robert Louden, the chief negotiator, put it after all the hostages were released and the gunman surrendered Saturday morning, "The media is something the police both love and hate."

Police had provided Van Dyke a radio and television set at about 4 p.m. Thursday as a condition for release of the first hostage.

Four hours later, Van Dyke said he would release another hostage if a radio station, WOR, allowed Ms. English to broadcast his gripes about prison conditions. WOR complied, urging Van Dyke to feel free to contact them personally if he had more to say.

At 8:35 Van Dyke said the hostage was on his way out, but only after radio and television agreed to let the hostage stand before cameras and microphones to second Ms. English's comments.

Van Dyke said a third man would be freed if that hostage's message was broadcast live by WABC-TV during the 11 p.m. news. The station complied as hostage Perry Richards relayed Van Dyke's love for his wife and said no one would be hurt "as long as the police or nobody tried to provoke anything."

Things were quiet until the Friday morning papers were delivered to Van Dyke. He became upset and uncooperative because reporters had discovered that in 1979 Van Dyke had been accused of informing on fellow inmates.

HE DEMANDED that copies of 1978 Buffalo Evening News articles explaining his side of the story be brought to the hospital. The paper was contacted, dug the stories out of its files, dictated them to volunteering reporters, and they were provided for use in negotiation.

On Friday afternoon, Van Dyke said he would allow the two remaining hostages to be interviewed.

A pool of reporters was taken to a window well outside Van Dyke's locker-room fortress in the basement of the hospital. Part of the agreement between Van Dyke and police, and then with the reporters, was that the only questions to be asked would concern the captor's treatment of the captives.

At about 4 p.m. Friday Van Dyke said he would release the next-to-last hostage if WABC-TV and WINS radio would broadcast the release live.

It wasn't easy for WABC-TV to clear air time in mid-afternoon. The reporter scheduled to go on the air, Bill Beutel, was told by his office to stress to the public that the broadcast was being made "at the request of the police department."

As arrangements were made, Van Dyke indicated he was changing his mind about the release. Police warned such a reversal would "kill his credibility with the news media."

THE HOSTAGE, John Leonard, was suddenly released at 4:30. WABC got on the air, interrupting regular programming, but was unable to show the entire scene.

During its regular 6-7 p.m. newscast, WABC presented stories about the continuing siege, as did other stations. But in the middle of WABC's newscast a frantic call came to the WABC staff at the hospital: Alice McGillion, the police spokeswoman, said Van Dyke was angry and agitated because an edited version of the Leonard release was shown.

The station, "at the request of the police department," put the entire 10-minute scene on the air at the end of its newscast, bumping other stories.

During the evening, police sheparded reporters to the basement of the hospital to watch the hostage negotiators sitting in near-darkness, whispering to each other as sporadic talks continued with Van Dyke. Each time Ms. English could be seen, huddled with an editor.

At 6:15 Saturday morning, Van Dyke asked for live televison coverage of a statement and possible surrender. But that was denied. So at 7 a.m., Van Dyke turned to WINS radio, giving a reporter an interview. He called on the station's reporter 45 minutes later and said he was planning to free the last hostage and surrender, but he wanted everyone to be ready.

Van Dyke then launched into a condemnation of the New York Post, "because they have been calling me informer, madman."

"I'M NOT A madman, let's get that straight now. I'm a man that was trying to get freedom," he said.

Van Dyke then signed off with the promise to reporters that "If there's no more blunder errors and lies this man (Elton Smith) will be home with his wife and kids and I will surrender myself."

Convict releases hostages, ending seige in hospital

NEW YORK (AP) — A 33-year-old convict who took five people hostage in a hospital basement during an escape attempt released his remaining hostage and surrendered Saturday, ending a 46½-hour siege.

Larry Van Dyke, a "career criminal" who was to have been sentenced Friday on an armed robbery charge, agreed to give up in exchange for making a final statement to reporters on prison conditions.

"I am not a madman," Van Dyke told reporters through a window shortly before giving up. "I'm a man that was trying to get freedom...I got caught, I'm here."

The ordeal began at 10 a.m. Thursday when Van Dyke, who had gotten a cast removed from a broken hand, seized a prison guard's gun, wounded the guard in the arm and holed up with five hospital employees in a basement locker room at Brooklyn's Kings County Hospital, the nation's second-largest hospital behindCook County Hospital in Chicago.

At 8:25 a.m. Saturday, Elton Smith, 28, a clerk, was released. Five minutes later, Van Dyke, who is called Larry Gardner in court papers, put his gun on the window ledge and clambered out of the basement, surrendering to heavily armed police and negotiators.

It was not immediately clear what criminal charges Van Dyke would face. Police said a complaint would be drawn up by the Brooklyn district attorney's office after interviews with everyone involved in the case.

In explaining his bid for freedom, Van Dyke told police early in the negotiations that he did not want to spend the rest of his life in prison. That was the maximum term he was to have faced Friday if sentenced as a "persistent felon" on a robbery charge.

However, while in Attica prison in the late 1970s, Van Dyke was pinpointed as an informer on fellow guards and inmates. He denied informing on inmates, but said such reports made his prospects for survival slim if returned to state custody.

He released Smith, who had a pocketknife throughout the incident but chose not to use it, and surrendered after extracting promises he would be held in a federal facility and after alerting reporters to his complaints about prison.

All along, Van Dyke linked his actions to promises of media coverage, repeatedly trading hostages for television and radio time. Various local broadcast stations complied with police requests for help, in one case even to the extent of rerunning a 10-minute statement by the convict during the prime-time news.

Van Dyke, who has spent much of his life behind bars for crimes ranging from car theft to kidnapping, constantly complained the state prison system was rife with corruption and incapable of rehabilitation. He said he also had been used by white prison officials to frame black prison guards on narcotics charges.

Police negotiators who clustered around an 8-foot well leading down to the window of the locker room rode an emotional roller coaster with Van Dyke as the hours passed and he did not sleep. He threatened suicide several times, at one point having Smith tell police, "You're gonna hear a shot. It won't be me. He said the minute you hear the shot you can come and get me."

Another time he told police connected with him by closed-circuit television and telephone, "I've got nothing to lose. We're going to play Russian roulette."

That was the only time police considered rushing Van Dyke. They called it off when the convict spotted movement.

Police Lt. Robert Louden, chief of the Hostage Negotiation Team that says it has never lost a hostage, said after Van Dyke was in custody that those periods were "the most tense for me" because "suicidal persons may also be homicidal persons."

Three hostages were released during the first 14 hours, each after officials complied with demands for food, a radio, a television and media access.

The fourth was freed Friday afternoon after a television station agreed to broadcast the release live and gave Van Dyke the opportunity to air grievances about prison life. "I have been beat up, I have been set up," he said.

He then allowed John Leonard, 52, a barber, to climb up from the window to the surrounding courtyard, and said, "If everything goes smoothly, I might release another one in an hour or two."

But four hours later, Van Dyke was said to be "at a low point ... hysterical and crying."

American official meets with Portugese to discuss renewal of U.S. air base's lease

LISBON, Portugal (AP — U.S. Assistant Defense Secretary Frank Carlucci is meeting with top Portuguese officials on the renewal of the American lease on a strategic mid-Atlantic air base in the Azores Islands, diplomatic sources said Saturday.

Carlucci met separately Friday with President Antonio Ramalho Eanes, Prime Minister Francisco Pinto Balsemao, Defense Minister Diogo Freitas Do Amaral and Foreign Minister Futscher Pereira.

Carlucci refused to make any comment on the meetings, but diplomatic sources said the talks focused on the future of the Lajes air base. The American lease expires in February.

The United States has maintained installations at Lajes since the 1950s, but negotiations with Portugal over the cost of renewing the lease have reached a stalemate in recent months.

Carlucci was said to have discussed increased military aid to Portugal, which is a member of the North Atlantic Treaty Organization.

Earlier this year, when the U.S. Congress drastically cut military funds to Portugal, Freitas Do Amaral said his government would "reconsider" his country's position within the NATO alliance if aid were further reduced.

Military sources say Portugal's armed forces are pressing for new war ships and a squadron of American A-7 fighter planes. The plan is said to call for financial help from NATO and the United States to make the purchase.

Negotiations over the re-equipping of the impoverished Portuguese armed forces have dragged on for more than two years without any firm agreement.

Pope declares rights of workers inviolate

VATICAN CITY (AP) — Pope John Paul II on Saturday praised American longshoremen for expressing solidarity with the workers of his native Poland and declared that no human power can violate the rights of workers.

In a thinly-veiled reference to the plight of Polish workers, the pontiff said the Roman Catholic Church "must necessarily insist on the rights of workers, rights...society is called upon to protect and foster, never to violate, or much less, to attempt to deny."

The pope addresssed 250 members of New York Shipping Association of the International Longshoremen's Association in a special Vatican audience on the fourth anniversary of his election to the papacy. He spoke in English.

"At this important moment in the history of the workers of the world, it is necessary to underline the need for new movements of solidarity of workers and with the workers," the pontiff said.

"You yourselves feel this solidarity with the workers of my native Poland, and I am grateful to you," the pope said, and added:

"The power of your solidarity in a cause that is right is an immense contribution to human dignity of workers everywhere. It is a matter of obtaining basic freedoms, which can only flourish, as you say in America, 'with liberty and justice for all.'"

Quoting from Pope Paul VI, John Paul said "Those in power (who) do not nobly respect the rights and legitmate freedoms of the citizens' tranquility and order remain nothing but a deceptive and insecure sham, no longer worthy of the society of civilized beings."

The pope made no mention of clashes between police and workers in Poland that began after the Polish martial law regime outlawed the church-backed independent labor movement Solidarity last week.

But John Paul said the rights of workers are "the rights of the human person, which no human power can transgress with impunity. It is a question of inalienable rights and legitimate freedoms."

He told the American visitors that the Roman Catholic Church will "continue to proclaim the value of work — she will labor and toil for this cause. But, above all, she will proclaim the dignity of the workers...

"And amidst your many activities, may you too lift up your hearts to God...and continue to ask for liberty and justice for all."

Chinese turn out for unusual 'swap meet'

PEKING (AP) — Fed up with in-laws and cramped living quarters, thousands of Chinese are turning up for the great fall apartment-trading festival, held in a park under a billboard reading, "Wishing You Success In Swapping."

The swapping fee is a nickel, and more than 12,000 units were listed when the three-day marathon started Friday in the park of the Workers' Cultural Palace next to the Imperial Museum and Forbidden City.

Among the space-seekers are many newlyweds who must wait two to three years to get a postage-stamp size apartment of their own.

The average size is 150 square feet. The toilet is usually down the hall and the monthly rent averages about $1.

IN THE past three years many Peking residential districts have organized 25 smaller swapping festivals and 50,000 space-hungry residents took part. From January to August, 19,220 had swapped flats.

But the latest festival is the biggest so far.

Applicants look at the thousands of listings posted on walls and billboards, then register at a booth staffed by workers of the Municipal Housing Bureau.

They fill out forms and are told to make direct contact with tenants of the apartments they want. Once both sides agree, the swap can take place.

The swapping festival provides the listings of available apartments and then it's up to applicants. The housing officials then formalize the swap and change housing registrations.

PEOPLE SWAP for reasons of space, proximity to work, marital problems, need to relocate near elderly relatives — and the desire to get away from them.

In China, no one can own their own housing, all space is assigned by the state work units, and trading often is the only solution.

Apartment swapping reveals the soap opera details of domestic arrangements in a country where housing is incredibly cramped, the language contains no word for "privacy" and space is one of the great luxuries.

Consider the case of Miss Lei and her husband Wu, neither of whom would be identified further.

THEY WERE granted a divorce three years ago and the court ordered they should have separate rooms in their flat. Wu said it was his flat and threw his ex-wife out. She has been looking for a roof over her head.

Arafat's talks with Jordan's Hussein betrayal, claim radicals within PLO

DAMASCUS, Syria (AP) — Two radical factions of the Palestine Liberation Organization on Saturday accused PLO leader Yasser Arafat of betraying the Palestinian cause by pursuing plans for a federation with Jordan.

The Popular Front for the Liberation of Palestine (PFLP) and the Democratic Front for the Liberation of Palestine (DFLP) charged that Arafat's recent talks with Arab leaders on a U.S. proposed plan for Palestinian autonomy in association with Jordan were aimed at "liquidating the PLO."

Syria, joining in the attack, described the plan as an "American-Zionist scheme" to "blow up all the gains ot the PLO and the Palestinian cause."

The PLO weekly magazine Filasteen Al-Thawra, appearing in Cyprus after a two-month suspension following the PLO evacuation from Beirut, lashed out at what it said were "fierce" attacks from within the Palestinian camp on the "wise and brave leadership of Yasser Arafat."

It said Arafat's meetings with King Hussein of Jordan and other Arab leaders did nothing more than "pursue the goals" of last month's Arab summit in Fez, Morocco.

The Fez summit mandated Arafat to formulate and seek approval of a common stand based on the various peace plans offered in the wake of PLO's evacuation from Beirut in August.

Arafat and Hussein reportedly agreed during their talks last week to start negotiaions with Washington over President Reagan's plan for Palestinian autonomy.

Reagan's plan calls for "full autonomy" for the Israeli-occupied West Bank and Gaza Strip, to be followed by Palestinian self-government in association with Jordan.

Arafat said final decision on an accord with Hussein would be made after deliberations by the Damascus-based Palestine National Council — a Palestinian parliament-in-exile. The 308-member council is expected to meet in Tunis in November.

Al Fatah, the PLO group led by Arafat, is by far the largest within the council and claims to control about 60 percent of its seats. The PFLP, headed by George Habash, is the most militant of the PLO's eight guerrilla groups, but has only 15 members in the council. The radical DFLP has 14 seats.

The Popular Front's newspaper Al-Thawra Mustamera (The Revolution Is Continuing) said creating a Palestinian federation with Jordan was aimed at "liquidating the PLO."

The paper said Hussein was "trying to take advantage" of his meetings with the PLO to further his plans "to join the West Bank and Gaza Strip to the Jordanian regime."

The Democratic Front, headed by Bayef Hawatmeh, also rejected the federation plan, saying in its newspaper Nida Al-Watan that "these attempts of the reactionary regimes have no chance to pass."

Shiite Moslems protest bulldozing of homes near Beirut airport by government troops

BEIRUT, Lebanon (AP) — Moslem demonstrators occupied a partially-built mosque and massed on the coastal road near Beirut airport Saturday after Lebanese troops bulldozed their homes and reportedly killed four protesters, including a woman crushed by a tank.

About 100 demonstrators occupied the mosque and left at nightfall to join approximately 1,000 others gathered on the beach road, also near the airport, where bulldozers continued to mow down homes. The demonstrators said they wanted new houses before their old ones were destroyed.

Three Moslems were shot and killed and one was mowed down by a tank during a protest by hundreds of Moslem squatters near the airport Friday evening, according to Abu Koufran, a leader of the Shiite Moslem organization called Amal. He said 15 people were wounded.

The private Central Information Agency quoted military prosecutor Assad Germanos as saying one person was killed attempting to attack a Lebanese army barracks in the area Friday evening. It quoted a security report as saying three others were killed when they hurled rocks at soldiers.

The Lebanese army has bulldozed hundreds of tin shacks and concrete houses which it says have been built dangerously close to flight paths. The army says the shacks were built illegally on private and government property. Most of the inhabitants are Shiite Moslems who fled from southern Lebanon after Israel invaded in 1978 and again this June.

"The tanks suddenly came and they began shooting at people," said Enaam Jraby, a Shiite Moslem who said she took part in the demonstration Friday. Miss Jraby and other witnesses said the protesters were unarmed and were mostly women and children.

She and Koufran, who also took part in the demonstration, said several hundred squatters blocked the airport road near a neighborhood mosque Friday and burned tires to protest the bulldozing of houses.

A funeral service was held Saturday for a 14-year-old boy whose family said he was killed in the demonstration. Some of the mourners wore bandages covering the wounds they said were inflicted by Lebanese army soldiers.

A precious play on peppermint

Yummy peppermint stripes for kids' holiday dressing, and each suit easily adapts for summer, too. Shown: Jumper, sizes 9 to 18 months, 42.00; sizes 2 to 4, 44.00; sizes 4 to 6X, 50.00. Search for sub to go on

STOCKHOLM, Sweden (AP) — The search for one or more unidentified alien submarines in Stockholm's southern archipelago, now in its third unproductive week, will go on "indefinitely," the Swedish navy said Saturday.

Media interest has diminished as the weeks have dragged on without concrete results from the navy's hunt for elusive intruders in two bays just off Sweden's main naval base.

Initial speculation was that the sub or subs were from the Soviet bloc.

The few reporters attending Saturday's briefing were not encouraged as the navy's chief spokesman, Cmdr. Sven Carlsson, turned up empty-handed again.

"We have no new indications of foreign subs to report from the past 24 hours. But the search continues and will go on indefinitely," Carlsson said.

Hors Bay, where military personnel first spotted a periscope on the doorstep of the top secret Musko naval base Oct. 1, will remain barred to civilian traffic for weeks, pending completion of the combing of the bay's bottom, he explained.

The military press briefings, moved this weekend from the Berga training base on Hors Bay to barracks in Stockholm, will be phased out. Carlsson said there would be one more scheduled briefing Sunday but henceforth the press would be called only as developments warrant.

China launches ballistic missile from submarine

PEKING (AP) — China has successfully launched an intermediate range ballistic missile from a nuclear-powered submarine, the official Xinhua news agency reported Saturday.

Xinhua said the launching took place between Oct. 7 and Oct. 16 and that the target area and air space have been reopened to navigation and flights.

The firing made China the fifth country to possess submarine-fired missiles, in addition to the United States, the Soviet Union, Britain and France.

London Fog® Week

These coats are perfect for weathering the chilly temperatures ahead! For misses..."Lissette" fashioned of Fortrel* polyester and combed cotton Claeth Cloth*, with zip-out Orlon* acrylic pile lining, 8-18, $147. Chinese plane lands in South Korea

SEOUL, South Korea (AP) — A Chinese MiG-19 landed at a military airfield in the southern part of Seoul Saturday, informed sources said.

A government spokesman said he had no knowledge of the reported landing.

One source said it was believed the pilot made an emergency landing after his aircraft developed engine trouble. Other sources said they had been told that the pilot had defected.

The sources, some of whom said they witnessed the plane's arrival, said there was one man aboard the plane.

The sources asked not to be identified.

If the reports are accurate, it would be the first known landing of a plane from China in South Korea.

Basque terrorists foiled by pole

VITORIA, Spain (AP) — Basque separatists fired a grenade at the headquarters of the government's delegate to the autonomous Basque administration Saturday, but it hit an electricity pole, rebounded into a nearby club and failed to explode, police said.

The attack was carried out by several young men who fired the grenade with a launcher from a highway 100 yards from the building..

Astonished motorists told police the attackers got out of their car, halted traffic, calmly aimed the launcher at the building, pressed the trigger and drove away.

Marriot hotel chain improves palace

CAIRO, Egypt (AP) — Prime Minister Fuad Mohieddin on Saturday inaugurated what Marriott hotel officials said was the largest hotel in the Middle East, a 1,250-room complex built around a palace constructed for Empress Eugenie of France 113 years ago to attend the opening of the Suez Canal.

The hotel buildings are spread over 40 acres on the mid-city Gezira Island in the Nile. The palace has been renovated and is flanked by two 20-story towers. Behind the palace is an indoor-outdoor swimming pool surrounded by shady gardens and an arc of poolside-suites.

Denmark's leaders OK austerity

COPENHAGEN, Denmark (AP)—Denmark's conservative government survived a cliff-hanger Saturday when Parliament approved an austerity plan by a vote of 90-85 and averted new elections.

The plan suspends all automatic cost-of-living wage adjustments and imposes a ceiling of 4 percent on increases in new two-year general wage agreements to take effect next spring.

Prime Minister Poul Schlueter had warned that he would have no other choice than calling elections unless Parliament approved the plan.

Tanzania reluctantly shelters fugitives

DAR ES SALAAM, Tanzania (AP) — Tanzania has granted political asylum to two self-proclaimed leaders of an Aug. 1 coup attempt in Kenya, but would prefer seeing them go elsewhere, Tanzanian and diplomatic sources said Saturday.

U.S. threatens to leave U.N. if Israel ousted

By O.C. DOELLING

UNITED NATIONS (AP) — With a strong tide of world public opinion running against Israel, the Reagan administration is warning more forcefully that the United States will walk out of any U.N. body that ousts the Jewish state.

Secretary of State George P. Shultz obviously concluded the time had come on Saturday to serve personal notice that the United States meant business and was not merely voicing idle threats. Ambassador Jeane J. Kirkpatrick, chief U.S. delegate to the United Nations, issued a similar warning last week.

Some doubts about the U.S. resolve arose here, however, when the Reagan administration did not immediately announce the cutoff of funds to the International Atomic Energy Agency after that 110-member U.N. body rejected Israel's credentials in Vienna last month.

An Analysis

The ouster prompted the United States and 14 other countries to withdraw from the Vienna conference, which was nearly over anyway.

Mrs. Kirkpatrick was understood to have urged more vigorous U.S. response, and, on Saturday, Shultz announced that the United States was withholding funds from the IAEA.

WHILE THE REAGAN administration was reassessing its future role in the IAEA, new challenges to Israel's credentials were mounted by hard-line Arab states at the United Nations' International Telecommunication Union meeting in Nairobi, Kenya, and at the U.N. General Assembly in New York.

The instigators — Algeria in Nairobi, and Libya and Iraq in New York — sought to capitalize on worldwide condemnation of Israel's military actions in Lebanon.

Shultz underscored a prime U.S. concern when he said in his statement Saturday that Israel's ouster from the General Assembly would represent a "serious setback for progress toward peace in the Middle East."

Mrs. Kirkpatrick, meeting with reporters here last Wednesday, alleged that "extremist rejectionists" with Soviet-bloc encouragement were attempting to polarize the Arab camp and to alienate the more moderate Arab regimes from Washington. Algeria, Iraq and Libya belong to the so-called Arab "rejection front" which is opposed to peace with Israel.

Even moderate Arab diplomats here have voiced suspicion that Libya and Iraq were attempting to undermine peace initiatives recently launched by President Reagan and by Arab leaders at a summit conference in Fez, Morocco. Morocco's King Hassan is due in Washington later this month at the head of an Arab exploratory peace mission.

MOST OF THE 21 MEMBERS of the Arab Group at the United Nations had let it be known that they opposed or were not enthusiastic about the Libyan-Iraqi ouster campaign. But, in the aftermath of the west Beirut massacre by Christian militiamen allied with Israel, the issue is so emotionally charged that all members of the group went along, albeit reluctantly. Egypt has been suspended from the Arab group because of its peace treaty with Israel.

The ouster campaign seemed to falter last week when the Arabs failed to win the general backing of the 41-member Islamic Conference Organization.

But the hard-lne Arabs did succeed in getting Imre Hollai, the Hungarian president of the 157-nation General Assembly, to postpone for a week a vote on credentials. The delay, until Oct. 25, was intended to give the hard-liners more time to lobby for support among Third World diplomats, who are in the majority here.

A vote on credentials could lead to Israel's ouster if that country's right to participate is formally challenged.

U.S. deserts confrontation in dealing with Nicaragua

WASHINGTON (AP) — Setting aside previous confrontational policies, the United States is assuming a lower profile in Central America as part of a new strategy aimed at moderating Nicaragua's leftist government.

The strategy is based on the simple premise that friendly Latin American governments are more likely to be able to influence Nicaragua than the Reagan administration, U.S. officials said in recent interviews.

With strong U.S. backing, representatives of eight Latin American democracies met in Costa Rica earlier this month and issued a declaration outlining a series of recommentations for achieving peace in the region.

The recommendations coincide with American goals. And, although Nicaragua was not mentioned by name, the proposals were directed largely at that country.

The key principles in the declaration included a call for an end to subversion in Central America, including cross-border arms trafficking. It also called for the establishment of democratic rule throughout the region, an end to the arms race and the elimination of foreign military advisers.

The Reagan administration has made tentative moves toward opening negotiations with Nicaragua, but this effort appears to have been shelved because of mutual mistrust.

Nicaragua's main complaint is its charge that the Reagan administration is secretly backing armed counter-revolutionary Nicaraguan exiles operating in Honduras.

The basis for American hostility towards Nicaragua remains unchanged. The administration continues to be concerned about Nicaragua's arms buildup, its suppression of opposition parties, its heavy reliance on Soviet bloc weapons and advisers and its alleged weapons shipments to El Salvador.

During the tenure of former Secretary of State Alexander M. Haig Jr., there were hints that the United States was considering military action against Nicaragua. These signals may have been aimed at intimidating the Nicaraguans into a more moderate posture but this does not appear to have occurred.

The new strategy reflects the less confrontational approach of Secretary of State George P. Shultz. The willingness of friendly countries in the area to take the initiative with the Nicaraguans also demonstrates the growing restiveness of these countries about Nicaragua's leftist leadership.

The countries involved in the new initiative are Belize, Colombia, El Salvador, Honduras, Jamaica and Costa Rica.

Sikhs demand autonomy for Punjab

By JAMES W. HATTON

NEW DELHI, India (AP) — With their bright colored turbans and flowing beards, their military bearing and aggressiveness, the minority Sikhs stand out in the multitudes of India.

Last week they made their presence forcefully known in this capital, clashing with police at the gates of Parliament to underscore their demand for autonomy in Punjab, their home state. Police gunfire killed four of the demonstrators, who were trying to storm Parliament.

Prime Minister Indira Gandhi on Friday ordered thousands of Sikh militants released from jail in the northern state of Punjab, but their political leaders

AP News Special

spurned the measure because it failed to address their demands.

The 1981 census counted only 13 million Sikhs — not quite 2 percent of India's population. Yet Punjab is the scene of continuing, often violent demonstrations demanding autonomy.

FAMOUS AS WARRIORS, Sikhs made up about 30 percent of the colonial army before independence from Britain in 1947, but in India's present-day army, they fill only 10 percent of the ranks. The decline usually is attributed to the general affluence of the Sikhs that makes the army unattractive to them now.

In politics, two of Mrs. Gandhi's senior Cabinet members are Sikhs. Zail Singh, currently recuperating from heart surgery in the United States, is India's first Sikh president.

Still, the Sikhs maintain they are deprived. And they are determined to fight for what they believe is their due, as they have throughout history.

Sikhism was founded in the 15th century by the first of 10 "Great Gurus" (teachers), Guru Nanak. Though basically an offshoot of Hinduism, Nanak incorporated some aspects of the Moslem religion — such as the concept of one God — in an effort to unite the two and end centuries of communal bloodshed.

Sikhism also provided a convenient way out from under the Hindu caste system.

NANAK'S SUCCESSOR, GURU ANGAD, produced the Granth, the Sikh holy book.

During the early 1600s, the Sikhs suffered great religious persecution under the Mogul Emperor Aurangzeb. Tegh Bahadur, the ninth guru, was executed when he refused to embrace Islam. His son, Gobind Singh, transformed the Sikhs into a militant brotherhood as a way of survival.

Gobind Singh also gave the Sikhs their surname — Singh — which means lion in the Punjabi language. Today, all Sikhs are named Singh except for a few nonpracticing members who have dropped the suffix. Some use Singh as a middle name, however.

Finally, Gobind Singh gave Sikhism five things that begin with the letter "k" in Punjabi: the kesh (unshorn hair and beards), kangha (the comb to keep hair tidy), the kirpan (dagger), the katch (short underpants), and the kara (iron bracelet).

Gobind Singh declared the line of Great Gurus ended as he lay on his deathbed in 1708, and said the Granth would guide Sikhs thereafter.

THE SIKHS LATER BECAME rulers of Punjab in the 18th century, but were defeated by the British in six fiercely contested battles in the mid-1800s.

With independence in 1947, the Sikhs found themselves caught in one of history's greatest bloodbaths when the country was partitioned into secular but predominantly Hindu India and Moslem Pakistan.

The line was drawn down the middle of Punjab. Millions of Hindus and Sikhs who lived in the west packed up and headed east. Millions of Moslems in the east headed west into their new Islamic state.

Conservative estimates said at least a half million people perished in the communal violence of the mass migration.

In recent times, Sikhs have prospered. Punjab is India's breadbasket, and many have become reasonably well off farmers. Those who have come south to New Delhi and Bombay generally have done well as taxi drivers or mechanics, tasks shunned by caste Hindus.

YET THE PUNJAB POT has been boiling for many months as the Sikhs — tired with what they claim has been decades of broken promises from New Delhi — agitate for greater autonomy. The Sikhs comprise about 52 percent of the state's 16.7 million population.

The latest trouble began last August when the Akali Dal, the main Sikh political party, decided it was fruitless to continue talks with Mrs. Gandhi's government.

According to Akali spokesman Hardayal Singh Man, the 43 demands of his group were put forth in a 1973 resolution adopted at a convention at the Golden Temple in Amritsar, 250 miles north of New Delhi. Key demands include:

— Semi-autonomy for Punjab state. New Delhi would continue to handle its foreign affairs, defense, communications and railroads, and currency. All other powers would fall to the state. A small extremist group, the Dal Khalsa, demands Punjab be a separate nation called Khalistan.

— **AN ENLARGED PUNJAB WITH** Amritsar as its capital. Punjabi-speaking areas of abutting Haryana, Himachal Pradesh and Rajasthan states, which were lost when boundaries were realigned in 1953 and 1956, would be reincorporated into Punjab. Chandigarh now is the capital of both Punjab and Haryana but is a union territory and thus part of neither.

— Designation of Amritsar as the central holy city for Sikhs.

Leader of attempted coup to run for office

MADRID, Spain (AP) — The Board of Elections on Saturday gave a rightist army officer permission to run for a seat in the national Parliament he held hostage for 18 hours in a 1981 coup attempt.

Lt. Col. Antonio Tejero Molina, 50, is serving a 30-year jail term for armed rebellion in connection with the aborted takeover of Spain's fledgling democratic government.

Waving a revolver, Tejero led 299 armed paramilitary civil guards in a siege of Parliament on Feb. 23, 1981, taking the Cabinet and about 350 legislators hostage. The takeover ended 18 hours later when King Juan Carlos ordered the military to put down the revolt.

A Madrid district court Thursday overturned an earlier election board decision that nullified Tejero's candidacy because he was a military officer. Tejero's convict status is not an issue at present because his sentence is under appeal.

The court ruled that Tejero's request to resign from the service, even though turned down, was sufficient proof he was no longer in the military. Most judges in Spain are appointees of the late dictator Gen. Francisco Franco, as are most high-ranking military officers.

Tejero's candidacy has provoked outrage among leaders of the main parties contesting the election, most of whom were held hostage while Tejero shouted at them from the parliamentary podium during the 1981 siege.

Former Prime Minister Adolfo Suarez said the court's decision was "a mockery of the Spanish people." Tejero's takeover of Parliament occurred during a vote on the transition of power from Suarez, who had resigned, to Leopoldo Calvo Sotelo, who had been nominated as the new premier.

Calvo Sotelo's lame duck centrist government has said it would try all legal means to prevent Tejero from running. The court's ruling, however, cannot be appealed.

Felipe Gonzalez, whose Socialist Party is expected to win the elections, told a rally Friday that it was ridiculous "that someone who stages a coup has to resort to the ballot box to see how much support he really has."

Communist Party chief Santiago Carrillo, one of the few members who remained calmly in his seat during the siege of Parliament, said Tejero's election would represent "the ultimate disgrace" of that institution.

Tejero, now held in a southern military prison, is president of Spanish Solidarity, an extreme rightwing party he set up several months ago following the dissolution of Parliament in August and the call for general elections Oct. 28.

Several leading Madrid newspapers have declared editorially that Spanish Solidarity is not a proper political party and has been created solely to sow confusion and panic among Spain's 27.6 million eligible voters.

The Interior Ministry has hinted that people connected with Spanish Solidarity may have been involved in a new coup plot disclosed by the government Oct. 2. Three army officers have been charged and sentenced for attempted rebellion in connection with the alleged plot to take over the Spanish capital the day before the elections..

Demonstrators attend anti-Mafia rally

PALERMO, Sicily (AP) — More than 20,000 demonstrators waving flags and chanting slogans gathered at Palermo's central square Saturday to protest organized crime and demand tougher government action against the Mafia.

The rally, organized by Italy's major labor federations, was the largest anti-Mafia demonstration ever held in the country, officials said. It came at the end of a government-labor conference to map a strategy to fight crime in southern Italy.

As the demonstration took place, three gunmen shot and killed the mayor of San Genaro Vesuviano, 18 miles south of Naples, in a Mafia-style attack in the town's main square, police said.

Investigators said Francesco Giuliano, 52, was killed ihstantly with multiple wounds in the head and chest.

Premier Giovanni Spadolini, who flew here with six Cabinet ministers and top police officials, vowed to crush "the challenge of the Mafia against the democratic republic."

The mob violence has claimed nearly 110 lives in Sicily this year, officials say.

Vatican says newspapers incorrect

VATICAN CITY (AP) — The Vatican said Saturday Italian newspapers wrongly reported that three outside experts had cleared it of all wrongdoing in the collapse of Italy's largest private bank.

Rome's conservative daily Il Tempo and others reported earlier this week that the three investigators concluded the Vatican bank committed no legal wrongdoings in its dealings with Banco Ambrosiano.

An unsigned article in the official Vatican newspaper L'Osservatore Romano said what the newspapers had reported were not the experts' findings but arguments presented by the Vatican bank to the experts to defend its practices.

Vatican officials said the article reflected the Holy See's official view. It was the first time the Vatican has commented on the substantive matter of the investigation by the experts — an American, a Swiss and an Italian.

It is the first time in Vatican history the Holy See has allowed outsiders to examine its finances.

The dispute concerns the Vatican bank's role in accumulating the $1.2 billion debt that led to Banco Ambrosiano's collapse. The bank was subsequently reorganized as Nuovo Banco Ambrosiano.

The Vatican bank, headed by U.S. Archbishop Paul C. Marcinkus, owned 1.58 percent of the Banco Ambrosiano stock.

Treasure of life called experience

By ED TODD
Staff Writer

The perennially youthful Marion Fisher, who "got a late start in life" in her career, looks upon years and aging as life's treasure called experience.

"There are interesting things that make each age agreeable," said Ms. Fisher, "and that (64) is how old I am, and I have no quarrel with it."

Staff Photo by Cody Bell

Marion Fisher counts her experiences in living rather than the years. Age is just the passing of time.

And the silver-haired woman noted that age "sneaks up on you after you get to be 35."

But, she doesn't mind aging at all.

"I've met so many marvelous people in their 80s," she said, "and that certainly gave me a different view of getting older."

Ms. Fisher, a Midlander since 1967, really got involved in the community following the 1971 death of her husband, W.S. "Terry" Fisher, who was the United Way of Midland director. She was 53 when he died.

"As a widow, I needed a job right away.

"I had no special skills, and went to business college. I learned I was too old to start at the bottom of anything."

So, she eventually dropped out of business college "to be a little old lady."

"What I did best was talking to people, and I tried to translate that into a job."

In 1973, the affable Ms. Fisher put her powers of conversation to work. "See," she said, "I started late in life; I always had to be the director of things."

She became director of the Midland Senior Citizens Center, which provided a fun-and-games recreational program for older folks. "I enjoyed that very much."

She was active in launching the Meals-on-Wheels program for the hungry and needy in the mid-1970s.

In 1976, Ms. Fisher left the Senior Center and became director of Senior Services Inc., which combined recreation and services, including a bus service for the older citizens and educational programs for teen-agers.

Then, for diversion, she expanded her experiences by becoming a radio personality on the radio's "Breakfast A La Carte" morning show which featured jazz aficionado Max Howard. On the air, she did a lot of ad-libbing. "That was eazy."

Ms. Fisher's current job is another new beginning for an "old-timer" to whom experience takes precedence over age. Now and for the past 3½ years, she has been executive director of the Midland Association for Retarded Citizens (MARC).

"It's gone fast," she said. "It's been a very interesting 3½ years."

MARC's aim is to serve that 3 percent of the Midland population which is considered mentally retarded. However, she noted, that percentage is being lowered due to this enlightenment: many people heretofore considered retarded were merely "victims of learning disabilities."

Ms. Fisher said that mental retardation is a permanent condition which can be altered but never cured.

"A lot of people look upon retardation as a disease, and it isn't. The actual fact about retardation is that once it has occurred, it cannot be changed. It can be altered. The degree of retardation and the IQ can be changed by various factors."

Retardation can occur in the pre-natal months, by accident at birth, and "people can be brain damaged at any point in their lives," she said.

"It's been mistaken as a contagious disease; it's been mistaken as mental illness."

Retarded people have the same feelings and emotions as anyone else.

"Retarded people are not expected to behave normally," she noted, "and when they do, they (outsiders) are surprised."

"There are retarded people who are musicians and artists and who excel in a lot of things."

Before her adventures in Midland, Ms. Fisher was in Wisconsin, where she, on a volunteer basis, set up adult-learning centers. Before that, she lived in Minnesota and New York, where she grew up. Midland, she said, "has been a marvelous place to live."

And she does acknowledge another phase of her life: being a mother and grandmother. She has four daughters, one grandson, three granddaughters and "three marvelous sons-in-law."

"Life is experience," Ms. Fisher said. "Every baby is going to grow older. It's nice to walk and talk and not do that (learning) all over again. I would hate to be a teen-ager again."

And Ms. Fisher readily identified the most rewarding period in her life.

"From Jan. 31, 1918, to right now."

Janie Dunson, left, and Gloria Ellis clean weeds and other trash from the tennis courts at Washington Park Saturday morning as part of a cleanup effort by the Black Advisory Council. The group hopes to continue its cleanup campaign at the park once a month.

Community unites to clean up park

By HALLYE JORDAN
Staff Writer

About a dozen people woke up Saturday to a beautiful autumn morning, stretched and dressed in warmup suits, jeans, sweatshirts and tennis shoes. Armed with rakes and brooms provided by the Parks and Recreation Department, the group met at Washington Park to begin the first of what they plan to be a once-a-month cleanup at one of the most beautiful parks nature has bestowed upon this West Texas city.

Although the huge trees provide shelter on sweltering summer days, they cannot guard the park from the litter left by inhabitants of the park.

According to Gloria Ellis, who organized the Black Advisory Council in an effort to clean up the park and improve communication in the black community, many parents in the neighborhood would like to bring their children to the park but feel it is unsafe.

Known for its many beer cans, broken glass, litter and dice games, the park has become a gathering place for young adults and a place for older citizens and children to avoid.

"On Sundays, we have a lot of young adults who really abuse the park," Ms. Ellis said. "Parents want to be able to take their kids here. We hope that the young adults and the parents will see what we are trying to do.

"We also are trying to help the Parks and Recreation Department with the maintenance," she continued. "We feel we can come out here and do the cleanup about once a month.

"We want to show them (the Parks and Recreation Department) that we really care about the park," she added, explaining that in the past, many items the department put in the park were destroyed or stolen.

In addition, Ms. Ellis said the Black Advisory Council wants to help the community with everyday problems, major or minor. Membership and board meetings will be held once a month to ensure communication, along with the regular park cleanup. As the council becomes more established, she said she hopes more and more community members will become involved.

"We're still new," she said, citing that the council was established July 22.

The two tennis courts were bare of nets. The court surface shone with tiny splinters of glass from broken bottles, making the entire court shimmer under the early morning sun. Clumps

Victims of burns face danger from shock, fluid loss, disease

By GAIL BURKE
Staff Writer

The stench of burning flesh and crackle of charred skin sends the body into a wild contortion as fire sears through the layers of tissue.

Four victims of an airplane crash and one bystander have been consumed by flames. Distant shrills from sirens can be heard throughout the city as emergency vehicles race to the scene.

Meanwhile, rampant nerve impulses alert each victim's brain, directing supplemental body fluids to the burned flesh to replenish the evaporated area.

The liquid part of the blood is rushed to the burned area, depleting the fluid supply which normally maintains the functions of the heart, brain and other vital organs.

As layers of scorched skin hang from the limbs and trunk there is pain. And more pain. Excruciating agony sets in.

PROMPT AND effective treatment is required. Expert medical attention is needed to keep the person from going into shock.

The body must be cooled quickly.

About 17 to 20 medical personnel are needed to care for one burn patient around the clock, according to Midland physician Dr. Shelton Viney.

This includes a physician constantly in attendance along with nurses, physical therapists and other necessary medical professionals.

"Unlike a gunshot wound where you can operate and repair, a burn takes a long time and must repair itself," Viney said. "It's time consuming."

Viney, on call the day a twin-engine airplane crashed and set fire to a Midland apartment building, knows first-hand how time-consuming and involved the process is for burn victims — he took charge at Midland Memorial Hospital's emergency room when the five burn victims from the airplane crash arrived.

WHILE TWO victims were cared for until they were transported back to their Louisiana residence, the remaining three victims were given emergency treatment and transported to the burn unit at Lubbock General Hospital within an hour and a half of their arrival at MMH.

Since that warm September day when residents on Midland's northwest side experienced "a once in a lifetime" disaster, people have been questioning whether MMH should have a burn center.

Viney and MMH officials say no — it's too expensive and not needed.

"These burn victims could not have gotten better emergency care — anywhere — like they received at Midland Memorial's emergency room," Viney said.

"We can handle any major burn in this community, if we wanted to make a conscious effort and take the initiative," he said. "But we have regional burn centers which have the massive manpower it takes to care for these patients."

Statistically speaking, Viney said there are about five burn victims a year in Midland who must be transported. And 90 to 95 percent of burns are treated in Midland, whether it be in the physician's office or the hospital.

"BUT, WITH THE extra personnel and expense it takes for treatment, a burn unit cannot be justified for those extensive burn cases," Viney said.

However, Viney said all hospitals follow the same initial treatment for burn victims.

The skin is the body's largest organ, but its important role is taken for granted.

It prevents infection from entering the body. Also, the skin protects the body from dehydration and acts as a filter to keep the body cool.

"The first step in caring for a burn victim is to treat him for shock," Viney said.

When the skin is ignited, the liquid part of the blood rushes to the burned area. As a result there may not be enough liquid left to maintain normal function of the heart, brain and other vital organs. This is known as shock.

"BEFORE 1943, death during the first 24 hours (in burn victims) occurred from shock," Viney explained. "In the '50s and '60s we began to understand more about shock. Now the primary cause of death is not shock; it's infection which may occur one to three weeks after injury," Viney explained.

During those first three to five minutes in the emergency room the burn victims' extremities were cooled with saline-drenched sterile towels. The medical attendants searched their bodies for embers as they draped them in the ice-cold dressings.

They were given oxygen for smoke inhalation and fluids — lots of fluids.

In fact, Randy Sellars, the 21-year-old Midlander who was injured in the fire from the crash, received six gallons of fluid during the first 24 hours of his treatment.

IVs, pumping antibiotics and other medication, were started to battle infection and heavily sedate each patient from the pain.

VINEY SAID it's difficult to determine the depth of a wound at first glance, but any burn involving more than 15 percent of the body surface is considered severe.

Third-degree burns, which the victims suffered, are the most serious type of burn, involving damage to the deeper layers of skin.

Because surface area, as well as depth, is important in evaluating a burned patient's status, a method called the Rule of Nines has been developed to determine the damage.

"With this calculation we can rapidly assess how much burn is present," Viney said.

He explained that head and neck burns are 10 percent, each arm is 9 percent, the chest and back each are 18 percent and each leg is 18 percent.

For example, if the trunk area and head and neck are burned, the victim would have 46 percent burns on his body.

THE TWO BURN victims who were

(See BURN VICTIMS, Page 3B)

Sherri Uhles, a registered nurse in Midland Memorial Hospital's emergency room, demonstrates how dressing is applied to a burn victim to prevent infection from setting in. Midland does not have a burn center, but, according to one physician, the city is equipped to handle all but a very few burn victims.

Staff Photo by Cody Bell

Nancy Williams, left, known Saturday as "Bobo the Clown," paints a happy face on 10-year-old Michele Proctor during the third annual Asbury United Methodist Church Fall Festival at the Midland County Exhibit Building.

Fall festival holds fun for all

By HALLYE JORDAN
Staff Writer

Among one of the tiny aisles, with crafts and baked goods almost overflowing into the crowd of people who squeezed by each other, stopping abruptly to chat with a friend or comment on a piece of art or an overstuffed doll, a little boy with a giant smile and a contagious giggle "walked" a wooden, ostrich puppet he directed with hands held far above his head.

Across the crowded Midland County Exhibit Building, a group of about 15 people, youngsters and elderly, marched in solemn unison around the cake walk, with friendly but determined smiles and wishful eyes that kept glancing over at the scrumptious cake awaiting one lucky person.

Down another aisle, by a booth lined with stained glass objects, a little boy grabbed his not-much-older sister's hand and shrieked with delight, "Pac Man!" at the familiar yellow figure.

It was the third annual Asbury United Methodist Church Fall Festival and the talent of those peddling their wares and the friendliness of those seeking craftsy little items and fun-filled companionship were better than ever.

The artists and craftsmen, bringing their talents from Sudan to San Angelo and from Kerrville to Kermit, also brought with them the friendliness of their towns and the friendliness of our town out in the crowded exhibition building which had a distinct aroma of part buttery popcorn and part freshly-baked cinnamon rolls.

From 9 a.m. to 6 p.m., Midlanders and out-of-town visitors sampled barbecue brisket lunches, inspected elaborate homemade items and listened for their name to be called as a lucky winner of one of the many door prizes being given away.

From the wooden stick horses with orange and blue faces, to the oversized cloth gingerbread dolls to the pink (and white gingham checked) elephants, something appealed to everyone.

People gathered around the Grand Prize, the patchwork, satin-tufted quilt, as did a crowd around the wet sponge throw.

There were red and green cloth Christmas decorations, personalized picture frames and pastel baby clothes. There were caramel apples and softly stitched pillows and brightly colored balloons. There were woven bread baskets, carpet wall hangings, cedar chests and cross-stitch samplers. Cosmetics and turquoise. Macrame and watercolors. Antiques and cast-iron sculptures. From a giant trampoline to a tiny, doll-like ceramic tea set.

A little boy in a bright green football jersey that was longer than his shorts strode off happily with the velvety-iced cake from the cake walk. A woman peddled her hot sauce, urging everyone who walked by to stop and have a sample.

And always, the sound of people chattering gaily lessened as they stopped to hear an announcement that another booth was reducing its prices.

Los Angeles fire survivors sue building's owners

LOS ANGELES (AP) — Fifteen survivors of an arson fire that killed 24 people at an apartment-hotel during the Labor Day weekend have filed a $50 million suit against the building's owners.

Attorney Lawrence R. Booth filed the wrongful death and personal injury suit Friday on behalf of Francisca de la Torre, seven other members of the de la Torre family and seven other former residents of the Dorothy Mae apartment-hotel.

The suit names as defendants Hiram Kwan, his wife and other owners of the building near downtown Los Angeles. Kwan did not return phone calls Saturday.

About half the fire's victims in the four-story building were children, and nine members of the de la Torre family were among the dead.

No arrests have been made in connection with the fire.

farm-ranch roundup

Cotton tour set for Monday

STANTON — A Cotton Industry Tour and Agriculture Appreciation Day will be held here Monday under the sponsorship of the Texas Agricultural Extension Service.

The tour group will gather at the Martin County Community Center at 8:30 a.m., travel by bus to a farm to observe a cotton stripper in action, watch cotton gin operations, view a demonstration of the Telcot Computer Marketing System and watch a compress at work.

The group will return to town to view films and slides of a mill operation and at noon will eat a barbecue sponsored by the Martin County Chamber of Commerce and the Mustang Soil and Water Conservation District.

During the noon hour, the group will watch a fashion show featuring cotton garments and will listen to Congressman Charles Stenholm speak.

Symposium to aid mesquite troubles

LUBBOCK — Ranchers who want to rid their rangeland of mesquite and make money at the same time may learn how in a Mesquite Utilization Symposium at The Museum of Texas Tech University Oct. 29 and 30.

"This symposium culminates five years of Texas Tech research specifically on uses for mesquite," according to Dr. Robert C. Albin, associate dean of the Texas Tech College of Agricultural Sciences. "In no way do we advocate growing mesquite for beneficial use. Rather, the symposium will show ways to defray the costs of cleanup and control of mesquite.

Registration for the symposium will begin at 7:45 a.m. Oct. 29. Cost is $30 and includes meals.

$7,500 awarded

The Sul Ross State University Division of Range Animal Science has been awarded $7,500 from the Houston Livestock Show and Rodeo for funding research projects.

The contribution brings to more than $317,000 the amount which the Houston-based show has contributed to Sul Ross over the past 11 years. The funds have been for endowed scholarships, graduate assisantships and graduate research projects in various phases of agriculture.

"The research grants from the Houston Livestock Show and Rodeo have given us the opportunity to carry out numerous research projects that will benefit not only this area but the entire state as well," said Dr. Ernest L. Harman, director of the RAS division.

The recent HLSR grant to Sul Ross will go toward funding the Glass Mountain Elk Study, embryo transfer research and delayed chilling research.

The show's contributions have also funded studies on trade mineral analysis of range grasses, behavior of feedlot cattle, supplemental feeding of range cattle, home range studies, antelope fawn mortality studies and charcoal feeding for prevention of loco weed poisoning.

Show expanded

HOUSTON — The construction of a 2.6-acre addition to exhibition facilities is a key factor in the 1983 Houston Livestock Show Feb. 17 to March 6.

Measurements aid area cotton crop

LUBBOCK — The West Texas cotton crop can benefit from cotton evaluation by instruments, according to James S. Parker, director of the Textile Research Center at Texas Tech University.

"Measuring cotton by instrument will remove subjective factors from the evaluation process," Parker said. "It also means that farmers who plant cotton varieties best suited to textile industry needs are going to receive more for it at the marketplace."

With more than 100 cotton varieties planted on the High Plains of Texas, a wide range of fiber strengh, length, micronaire, uniformity, fineness and color of cotton is harvested.

Precise measurements of cotton will permit the textile industry to purchase the best quality cotton at a better price.

Can GOP, liberals both win in elections?

WASHINGTON (AP) — Even the chairman of the Democratic Party concedes Republicans probably will keep control of the Senate in this fall's elections. And, paradoxically, the GOP concedes most of the country's best-known Democratic liberals will win again.

The result, if the trend two weeks before the election holds, will be another two years in which President Reagan has a secure congressional base from which to launch the economic and social issues on his agenda. And two more years of attacks from Sen. Eward M. Kennedy and other liberals bitterly opposed to Reaganomics.

"Only a fool would predict a Democratic landslide, a Democratic sweep," says Leon Billings at the Democratic Senatorial Campaign Committee.

And Charles T. Manatt, chairman of the Democratic Party, has this modest prediction: a gain of two to three seats in the 33 races for the Democrats. That's not enough to reverse the current 54-45 GOP advantage.

But on the other hand, Sen. Robert Packwood of the GOP Senatorial Campaign Committee has no interest in discussing Republican chances against liberal Democrats Kennedy of Massachusetts, Donald Riegle of Michigan and Paul Sarbanes of Maryland.

THAT IS NOT TO SAY that the two parties have abandoned hopes of scoring unexpected gains, and officials on both sides are forever producing poll results to buttress claims of longshot upset possibilities. Democrats, particularly, dream about a wave of voter anxiety, the result of a long recession and high unemployment, sweeping across the country in the campaign's final days and dooming the Republican majority.

Barring that, though, Manatt, Packwood and most others agree that in contrast to 1980, voters will treat most if not all incumbents kindly regardless of political party or position on Reagan's economic program.

"We should not lose any incumbent," Packwood said of the 11 Republicans seeking new terms.

Sen. Wendell Ford, D-Ky., chairman of the Democratic Senatorial Campaign Committee, echoes that. "I'm of the opinion that all our incumbents are going to be returned," he said. There are 19 of them.

OBVIOUSLY, THEY CAN'T BOTH be right about that and about their parties' picking up seats, as well. But others say that in some races where switches once seemed possible — a challenge to conservative GOP Sen. Orrin Hatch in Utah, for example, or to Senate Democratic Leader Robert C. Byrd in West Virginia — the incumbent appears to have taken command.

Incumbents aside, there are three states where senators are retiring, and two of them have among the closest races in the country.

In California, where GOP Sen. S.I. Hayawaka is retiring, a huge early lead enjoyed by San Diego's Republican Mayor Pete Wilson has evaporated and the momentum appears to be with Democratic Gov. Edmund G. Brown Jr. The most recent independent Field poll, published a week ago, gave Brown his first lead in seven surveys, 46 percent to 45 percent.

The race appears just as tight in Virginia, where GOP Rep. Paul Trible and Democratic Lt. Gov. Richard Davis both hope to succeed independent Sen. Harry Byrd, who is retiring. Reagan has campaigned there once in a bid to claim the seat for Republicans. But an Associated Press-WRC-TV poll released last week gave Davis a narrow two-percentage-point lead with one in five voters undecided.

THE THIRD "OPEN SEAT" is in New Jersey, where appointed GOP Sen. Nicholas Brady is retiring. It seems likely to remain Republican, though, with GOP Rep. Millicent Fenwick a likely winner over Frank Lautenberg.

No food poisoning from chili reported to Midland hospitals

No complaints about Wolf Brand Chili causing illnesses had been reported Saturday to Midland hospitals and a minor-emergency treatment center, though six Odessa teen-agers became ill due to apparent food poisoning from a fast-food restaurant.

Wolf Brand, headquartered in Corsicana, has recalled almost 2,500 cases of 15-ounce cans of its Chili Without Beans produced Aug. 2 and which were distributed in Texas and Lousiana. The recalled cans can be identified by the code numbers PC2H2 and AC2H2 and the numbers 1057.

Spokesmen for Midland Memorial Hospital, Parkview Hopital and Midland Minor Emergency Center said Saturday night they haven't treated persons for food poisoning by chili.

But at Ector County's Medical Center in Odessa, six teen-agers became ill Saturday after they had eaten at a fast-food restaurant. Five of the youths were treated and released and one was held for observation.

A hospital spokesman said she "did not know" for sure if the illnesses were related to chili.

The contaminated cans were brought to the attention of the U.S. Department of Agriculture after a Garland distributor observed swollen chili cans, and USDA laboratory tests subsequently confirmed the presence of clostridial bacteria, which are associated with tetanus and botulism.

Consumers who have canned chili from the suspect batches may return it to stores. A spokesman for the USDA caution that "under no circumstances" should the cans be opened or eaten.

Community to keep park clean

(Continued from Page 1B)

of weeds stuck up through cracks in the concrete. Along the wire fence that served as a backstop, paper sacks and plastic bags had blown into the wire mesh, where they remained trapped until they were pulled free by the people wielding rakes and brooms.

Beer cans rolled in the gutters along the street. Under the picnic tables and around the playground equipment, broken glass, flattened cans, cigarette butts, bottle caps and plastic straws were strewn.

"It is a beautiful park," Ms. Ellis said with a sigh. "We don't have any water here, but we hope the Parks and Recreation Department can put in a sprinkler system. Later on, we hope to be able to plant shrubs and flowers."

The group began its work. Sounds of the hoe hitting the concrete courts, the rustling movement of broom bristles and the scraping of rakes were interrupted only by chatter and laughter.

By 11 a.m., the courts no longer sparkled. Even if the sun had not hidden behind hazy skies, the glass that had shimmered in the early morning rays was gone, swept up into one of several large garbage bags placed around the area.

The courts were bare, except for two fat and full bags and the forlorn remainder of a basketball net that hung from a bent rim. The fencing around the courts was bare of paper and plastic trash, the weeds were gone and the gutters along the street were clean.

Under the branches of the thick trees, a few chopped weeds around the sandbox while others scraped up twigs, cans and glass with rakes.

Ms. Ellis, satisfied with the park's progress, leaned on the handle of her rake. "There was a guy here that was picking up beer cans along the street. We called to him to come join us. He shook his head but he kept picking up the trash along the street.

"He was doing his share," she said, smiling.

Woman found shot to death identified

ANDREWS — The woman who was found shot to death 15 miles east of here Thursday morning has been identified as Belen Reyes Castillo, 26, of Hobbs, N.M., Andrews County Deputy Sheriff Morris Brown said today.

The woman, a Mexican national, had been in this country for nine months, reportedly was considering returning to Chihuahua, and was reported missing on Wednesday.

She had been struck in about the center of the chest with a .22-caliber bullet, Morris said forensic pathologists in Dallas determined. Due to the relatively large wound, lawmen initially had thought she had been shot with a larger caliber firearm, he said.

Ms. Castillo's body was found near the fence line off Texas Highway 176.

Midland police investigate armed robbery, burglaries

Midland police officers are continuing their investigation of an armed robbery, two burglaries and a theft which occurred Friday.

According to police reports, Marcie Chivarra, of 3310 Douglas, told police that he had been robbed at knife point about 3 p.m. Friday. According to a witness, Juan Serrano Salas, of 2003 E. Front, Chivarra left Eddie's Bar, 403 N. Lamesa, with a Mexican male and a Mexican female to go upstairs in the Ranchito Bar Apartments to meet a girl, the report indicated. Salas told police that when Chivarra returned he told him he had been robbed at knife point by the two, who had taken his wallet which contained $500.

Salas told officers that the pair ran west when officers arrived. Police were unable to locate the suspects, who were identified by the owner of Eddie's Bar, Victor Gonzalez.

The police report indicated that later in the afternoon, Gonzalez contacted police to report that the male suspect was at the bar. The suspect was arrested for public intoxication and reports indicated a knife was found in his possession.

In other action, Johnny L. Hunt, of Route 3 Box 415, reported the burglary of a storage warehouse at No. 20 W. Industrial Loop. According to reports, motors, crystal glasses, pottery, fishing poles and reels and a Coleman burner were taken from the warehouse sometime between 12:30 a.m. and 11:30 a.m. Entry apparently was gained by breaking a lock off the storage bin door, according to police reports. Total loss was estimated to be $1,381.

Bobby Neathelin, of Midway Motors, reported the theft of seven spare tires from seven CJ-5 jeeps at about 4 p.m. Friday. The theft apparently took place between 7 p.m. Thursday and 9 a.m. Friday. Total value was set at $700.

John Morano, of 1300 S. Mineola, reported his residence had been burglarized sometime between 8 a.m. and noon Friday. According to reports, a television set and a stereo were taken. A window in the residence had been broken for two months, according to Morano, and a back door was unlocked. No value was set on the missing items.

Burn victims face many dangers

(Continued from Page 1B)

admitted to MMH suffered 20 percent burns, while the other three who were transported suffered up to 70 percent third-degree burns on their bodies.

"It can take a week to determine whether the burns are second- or third-degree burns, sometimes longer," Viney said, explaining that second-degree burns begin to heal, forming new skin, but third-degree burns will not form new skin.

"Dressings are applied to keep infection from setting in," he said, referring to skin substitutes such as birth product linings, pig skin and cadaver skin which are used to cover the burned area, protecting it from infection.

"But none of these will form new skin; they only act as a dressing," he added. "The patient must form his own skin, or in the case of third-degree burns skin grafts are done."

Skin grafting — the replacement of the severely damaged skin with healthy skin — is done after the injury is free from infection. Usually grafting is started about a week after the injury. One of the victims underwent the process during his first week in the Lubbock hospital.

Viney said the healing process can take a very long time, predicting that Sellars could be hospitalized up to a year.

DEATHS

Katie M. Webb

Services for Katie M. Webb, 65, of 405 S. Benton will be at 2 p.m. Monday at the Faith Temple Church of God In Christ with the Rev. W.C. Kenan officiating. Burial will be in Fairview Cemetery under the direction of Jackson Funeral Home.

Mrs. Webb died Thursday following a brief illness at her daughter's home in Fort Worth.

Survivors include her husband, James Webb Sr. of Fort Worth; two daughters, Ina Pearl Stroud of Carson, Calif., and Willie Ruth Henderson of Fort Worth; an adopted daughter, Mattie Pearl Lee of Midland; three sons, James Webb Jr., Robert Webb and Troy Webb, all of Midland; four brothers, a sister, 17 grandchildren and two great-grandchildren.

William Olliff

William "Bill" Olliff, 81, of 807 S. Weatherford St. died Saturday in a Midland hospital after a lengthy illness.

Services will be at 2 p.m. Monday under the direction of Newnie W. Ellis Funeral Home. Burial will be in Fairview Cemetery.

Olliff was born Sept. 12, 1901, in Van Dera County, Texas. He was the son of Mr. and Mrs. Arthur James Olliff. The family moved in November 1909 to Midland where he attended schools. He worked for several businesses including Scharbauer Cattle Company, Flour Construction Company and on the Santa Rita No. 2 oil rig, which opened the Big Lake area of the Permian Basin oil field. He also worked as an independent carpenter in the Midland area for several years. He married Elzona Wilson Olliff March 28, 1923, in Midland.

Survivors include his wife of Midland; three sons, John W. Olliff and Ben Olliff, both of Midland, and Paul Olliff of Dallas, Ore.; a daughter, Marie Thomson of Santa Anna, Calif.; two brothers, Leonard E. Olliff of Torrance, Calif., and Haley Olliff of Taft; a sister, Grace McDougal of Odessa; seven grandchildren and three great-grandchildren.

Katie Gaston

RUIDOSO, N.M. — Services for Katie Gaston, 75, of Capitan, N.M., mother of Willard Gaston of Midland, were held Saturday at Ruidoso Church of Christ. Burial was in Forest Lawn Cemetery in Ruidoso under the direction of Clarke's Chapel of the Roses.

Mrs. Gaston died Thursday in Ruidoso after a lengthy illness.

She was born March 3, 1906, in Nashville, Tenn.

Other survivors include her husband, a daughter, four sisters, two brothers, four grandchildren and a great-grandchild.

Dean McGee

SNYDER — Services for Dean McGee, 47, of Snyder, father of Doug McGee of Midland, will be at 2 p.m. today at Colonial Hill Baptist Church with the Rev. Miller Robinson officiating. Burial will be in the Hillside Memorial Gardens under the direction of Bell-Field Funeral Home of Snyder.

McGee died Friday morning in a Lubbock hospital.

He was born Oct. 31, 1934, in Howard County. He worked as a field representative for Oil Well Inc. He married Barbara Small Dec. 4, 1954, in Loraine.

Other survivors include his wife, a daughter, his parents and a sister.

Johnie Dell Bass

SAN DIEGO, Calif. — Services for Johnie Dell Bass, 48, of San Diego, Calif., and formerly of Midland, will be Tuesday in Denver, Colo.

Mrs. Bass died Tuesday in a San Diego hospital.

She was born Aug. 31, 1934, in Hillsboro. She was a resident of Midland for about 20 years before moving to Denver. She then moved to San Diego.

Survivors include her husband, Connie Bass of San Diego; a daughter, Diane Bass of Denver; her mother, Sarah Sanders of Denver; a brother, George Starr Oliver of Midland; three sisters, Barbara McQueen, Marilyn Frances Hill and Sara Hudspeth, all of Denver; an aunt, Lillie B. Paige of Midlad; five grandchildren and several cousins, nieces and nephews.

Charles Garmon

Charles R. Garmon, 49, of 801 S. Weatherford St. died Saturday in a Midland hospital.

Services are pending at Newnie W. Ellis Funeral Home.

Allie Thorn

Allie Thorn, 70, of 1801 N. Midland Drive No. 133 died Saturday in a Midland hospital.

Services are pending at Newnie W. Ellis Funeral Home.

Man says meat poisoned as part of plot

BERLIN TOWNSHIP, N.J. (AP) — An unemployed contractor took a police chief hostage and forced the chief to sit while he fried two hamburgers from ground beef he said had been poisoned as part of a plot, authorities said Saturday.

The police chief was released after promising a laboratory analysis of the meat, and the man, a gun collector, gave himself up at 1:30 a.m., 13 hours later.

No tests were run on the meat, said George Kearns, a spokesman for the Camden County prosecutor's office.

Berlin Township Police Chief Joseph Batten was taken hostage at noon Friday when he answered a call to Joseph Doman's yellow shingled home. Doman put a gun to the head of the 45-year-old officer and took his service revlover, Kearns said.

Director's dream telescope would dwarf all others

By PATRICK DEAREN
Staff Writer

He's had a dream for 12 years now, that of building a telescope in West Texas' own Davis Mountains which would dwarf any other such instrument on the planet.

An astronomer, teacher, author and observatory director, Dr. Harlan Smith of The University of Texas' McDonald Observatory has dealt all his life with theories and facts, hopes and realities.

It's reality that's gnawing at his soul right now.

Smith

For, despite the consensus of scientists that gravitational and magnetic forces make the earth whirl about the sun on an endless course through the heavens, Smith has finally acknowledged that it's really money that makes the world go around after all.

He needs $46 million to fulfill his fantasy of erecting on Mount Locke a 300-inch telescope which would render the USSR's 240-inch and Mount Palomar's 200-inch instruments virtually obsolete by comparison. But after a year and a half of dedicating his life to seeking donations from private individuals and corporations, he's gathered but $1 million.

The target date for the culmination of the ascension of the world's largest single-mirror telescope to the apex of Mount Locke originally was 1986; now, already, it has been pushed back to 1988.

"The money's come slowly," Smith reluctantly admitted while in Midland Thursday to address the astronomical society. "We're looking for a minimum now of $2 million to start building the mirror."

The giant mirror, to be ground by Corning Glassware, will take four years to complete, and six years will elapse from the moment the "money faucet is turned on" until the facility is operational.

The original target date was ambitious — too ambitious, Smith admits now, though he tempers that by noting that no other major telescope project ever has reached fruition in less than 13 years.

Space-age technology and computer wizardy have made possible such a 300-inch marvel, which could be built at only one-ninth the cost of a comparably sized classical instrument, he said. And its advantages over the world's existing telescopes are as bountiful as the stars in the heavens.

The 107-inch and 82-inch telescopes already on Mount Locke are still immensely valuable instruments, said Smith, "but they're no longer able to compete on the frontier with other telescopes, and that's one reason why we want the (300-inch)."

Such an instrument would be able to prove the textbooks wrong and actually map the surfaces of stars through a process known as speckle-interferometery, examine light emitted billions of years before the earth existed and "go where no man has gone before" in exploring the as-yet unknown depths of the universe.

In the vast reaches of space, said the McDonald Observatory director, lie great mysteries: quasars, objects no larger than a single star which radiate the energy of a trillion suns; black holes, enigmas which never can be seen, only theorized by their effects on surrounding matter and energy; wormholes, bridges connecting two distant points in the universe as theorized by Einstein and Rosen.

The 300-inch telescope may not offer the ultimate explanations, but Smith believes it will come closer to solving sphinx-like riddles than any instrument before it.

The Harvard University graduate noted that he toyed with constructing a 350- to 400-inch instrument, but that research determined a 300-inch would be the "biggest telescope that modern technology would allow." He added that the life-expectancy of the scope would be at least 100 years.

But to have a life-expectancy, it must first have existence. And that's what worries Smith right now.

"We're still looking for that first big donor, and I hope in the near future we'll have it," he said.

Individuals interested in helping finance the project can contact Smith at McDonald Observatory's offices in Austin, 512-471-4461.

Indictments Dismissed

Donald Gary Knight, indictment for criminal mischief on Aug. 2, 1982, dismissed. Defendant has made full restitution, and victim elected not to prosecute.

Kelly Kyle Rice, indictment for delivery of marijuana on June 15, 1982, dismissed. Defendant re-indicted.

Columnist to appear

Tickets for Charley Reese's appearance in Midland Oct. 28 are now on sale at two locations, according to a spokesperson for the Midland Society of University Women.

Tickets, priced at $5, may be purchased at J.E. Borron Clothing Store, 103 N. Colorado St., and at Curry's, 3112 Cuthbert Ave. Tickets also may be purchased at the door.

Reese, a syndicated political columnist for The Midland Reporter-Telegram, will speak at 8 p.m. Oct. 28 at the Midland High School Auditorium. Immediately after his speech, the Society of University Women will host a reception at the MHS Student Center.

A portion of the money raised will go to the society's scholarship and benefit fund.

Reese, who has been awarded several honors by The Associated Press and was named "Best Columnist in Florida" by the Florida Press Association, is the author of two books.

area in brief

Pastor to speak at Chamber banquet

McCAMEY — The annual Chamber of Commerce banquet will be held in McCamey Park Building at 7 p.m. Tuesday.

Featured speaker will be the Rev. Earnest Wall, pastor of First Baptist Church of Kennedale.

Theme of the banquet is "Wheels Rollin' On."

New president will be Gary Gregory.

Tickets at $7.50 per person can be obtained from the chamber.

Chili cook-off set

BIG LAKE — Big Lake's third annual chili cook-off will be held Saturday in Reagan County Park.

Proceeds will go to West Texas Rehabilitation Center.

Events will include a dog show, horseshoe pitching and washer toss, tobacco spitting, three-legged race, stick horse race, wheel barrow race, mechanical bull rider and armadillo racing.

A chili queen will be crowned, while Texas Gold will provide music for a dance from 9 p.m. to 1 a.m.

Entry forms for cook-off teams can be obtained from Big Lake Chili Cook-Off association, P.O. Box 8, Big Lake, 76932, or by calling 915-884-2008 or 915-884-2889.

Entries will be accepted until noon Saturday.

Company gives restoration funds

STANTON — Mabee Petroleum Corporation has presented Martin County Historical Commission and the Chamber of Commerce $77,720 to be used in restoration of Martin County Jail.

Situated on the courthouse square, the structure was built in 1908 and houses the original cell block constructed within the 1885 courthouse. A lock contains a patent date of 1874.

The building has served as both a jail and residence for sheriffs. In recent years it has served as a library and museum.

Banquet Nov. 9

LAMESA — The annual Lamesa Chamber of Commerce banquet will be held Nov. 9 at 7 p.m. in the high school student center.

Retail businessmen will be saluted during the affair.

Guest speaker will be Dr. Don Newbury, president of Western Texas College in Snyder.

Event chairman is Robert Crawley, senior vice president of the chamber.

Tickets at $8.50 can be obtained from any Round Up Club member or the chamber office.

Garage collapse kills one, injures one

AUSTIN (AP) — An Austin man was killed and another injured Saturday when a south Austin garage apartment fell on them as they worked to renovate it.

Authorities identified the dead man as Alvin Burrows, 67. Joe Burrows, 20, was in stable condition at Brackenridge Hospital.

A neighbor said the two men were in the garage, under the apartment, when it fell onto them. They had removed a lot of wood from underneath the apartment, and it gave way, the neighbor said.

The elder Burrows was pinned under the middle section of the two-car garage.

Legislator gives up, released

SULPHUR SPRINGS, Texas (AP) — A lame-duck legislator indicted on cattle theft charges turned himself in Saturday, then was released on bond, sheriff's deputies said.

Rep. Dave London, D-Leonard, was accompanied by his attorney when he arrived at the Hopkins County Sheriff's Office about 11 a.m., said deputy R.J. Shackleford. London posted a $10,000 bond that had been set following his indictment earlier in the week.

London, who claims the charges against him are part of a political vendetta, had no comment at his surrender. On Friday, he told the Sulphur Springs News-Telegram he was willing to take a Department of Public Safety polygraph test to prove his innocence.

He said he wanted District Attorney Jim Chapman to agree to drop the charges should London pass the lie detector test.

Chapman said he had no objection to the polygraph test but would not make any deals based on the outcome.

Grand jurors accuse London, a one-term lawmaker and livestock broker, of stealing five head of cattle from a Wills Point rancher June 1 and selling them at auction here for $1,600.

"This is political," London said earlier. "It is ridiculous. Any time you get an indictment against a man in Texas politics, he can't run again. They want to get me out of East Texas politics and they are doing a pretty good job."

"I think that is absolutely hogwash," Chapman replied. "Based on what I know about it, they (grand jurors) acted properly."

London claims the indictment shocked him. He said he never appeared before the grand jury and only learned of its action when he heard it reported on radio.

London was elected to the 23rd District seat in the Texas House in 1980, but his re-election bid was defeated in the May Democratic primary.

UT students inoculated

AUSTIN (AP) — University of Texas health officials, hoping to keep Baylor University measles off the local campus, offered free inoculations to students Friday.

The vaccine program was initiated after a UT-Austin student apparently caught measles from a visiting Baylor student, according to Valarie Cox, community health nurse.

More than 80 cases of measles have been confirmed at Baylor since September. Only one case has been reported so far at UT-Austin.

Tom Welch, public health adviser for the Texas Department of Health, said the Baylor outbreak appears to have peaked. Almost half of the Baylor student body was inoculated.

School officials enlist EPA aid in examination

DALLAS (AP) — School officials have enlisted the aid of the Environmental Protection Agency to inspect school buildings for asbestos, an examination prompted by news reports of dangerous levels of asbestos in classrooms.

The inspections will begin Monday. Representatives of the EPA, critical of past inspections for asbestos in Dallas schools, agreed to monitor this week's project after a meeting Friday.

"The EPA will go along to make sure our inspection procedures are correct," said Deputy Superintendent Otto Fridia.

"They made it clear they are ready to offer us any assistance they can," he added.

Fridia said the inspection program will last through Dec. 18 and will include 183 buildings.

Administrators decided to make the inspections after the Dallas Times Herald hired an independent consultant who found potentially dangerous asbestos in classrooms, hallways, auditoriums, offices and other areas.

The consultant reported finding "friable" asbestos — material that easily crumbled into small particles — in 10 schools chosen at random. The consultant took 30 samples and the newspaper said 29 of them showed asbestos above the level considered hazardous by the EPA.

"We are going to go into the first 10 schools identified in the news media where we might have an immediate problem," Fridia said after Friday's meeting.

Staff Photo by Cody Bell

Lillie Heitman studies some forms as she performs her duties at the Permian Basin Center for Battered Women and their Children, a United Way agency. Ms. Heitman, who was a battered wife before seeking shelter at the Center, has been involved with the Center as a staff member or volunteer for the last two years.

Battered woman finds courage

When Lillie Heitman arrived at the Permian Basin Center for Battered Women and their Children in January of 1980, she was a battered wife, but she thought she was crazy too. She couldn't understand whey she deserved all the abuse — emotional and physical — that her husband kept inflicting on her.

Finally, in desperation, she called the Center. "The director met me and spent all day talking to me — telling me over and over that I *wasn't* crazy," Lillie said.

She decided the best immediate course of action was to move to the Center with her 4-year-old daughter, April. Soon afterward, with counseling provided by the Center, Lillie began to realize that she *could* take care of herself and her child, and she filed for divorce.

In the two years that have followed, Lillie has become a different woman — confident and independent enough to reveal her experience as a victim of family violence.

Lillie says she was afraid for a long time to let her friends know what had happened to her. "My friends all had happy, perfect marriages," she said. "I couldn't let them know I had been such a failure."

She was afraid too that more violence would result if her family knew of the situation she was in.

Wife abuse begins subtlely, with deftly placed criticism, explains Lillie. "Why don't you cut your hair, honey? It just doesn't look good long any more." Before long, the complaints become broader and less easily remedied, until one day it's the wife's fault when her husband backhands her. Maybe she didn't have dinner ready on time or the children were making too much noise. But the "reason" is irrelevant, says Lillie. The important point is that a pattern has been established and the abuse is almost certain to continue unless the couple gets professional help.

"There's a fine line between a man being sick and a man just being sorry," says Lillie. "But an abused wife *is* sick if she doesn't get out and get help."

Lillie, who has been confined to a wheelchair since she had polio at age 8, says her husband sometimes hit her hard enough to knock her to the floor, but always was tender and contrite immediately afterward.

He needed an ever-increasing dose of controlling her, Lillie explained. But finally his domination added up to more than enough fear and humiliation for her.

In the last two years, Lillie has remained involved with the Center, either as a staff member or in various volunteer positions. She is vitally concerned that the Center's services remain available to any woman who needs a way out of an intolerable situation.

To ensure continued support for the Center, Lillie volunteered to participate in the United Way's Speakers Bureau this year, addressing employee groups and organizations which request United Way presentations.

She had first publicly disclosed her story of abuse on a television interview earlier this year, feeling that other women facing similar circumstances might benefit from her experience. But the first time Lillie went before a group of United Way volunteers to share her story was a different situation.

Lillie normally speaks quietly, but her voice held an extra quiver as she began, "I was a battered wife..." She gained courage, though, from the shocked and sympathetic faces looking back at her.

Her story convinced them, as no statistics could, that Midland does have a problem of family violence. Seeing her tell that story, despite the pain and humiliation it obviously recalled, convinced them, as no third party could, that they too as individuals could help relieve that problem.

It's Lillie's commitment that speaks loudest, though.

"If it's for the Center or if it will help one woman, any pain I might feel is worth it."

Study data collected

As part of the nationwide "Cancer Prevention Study II," research volunteers for the Midland Unit of the American Cancer Society have collected their initial data on 577 Midland County residents. The study is the Society's second major research endeavor to learn how lifestyles and environmental factors influence cancer and other diseases.

The 577 study participants completed a confidential questionnaire about their working, living and eating habits. These questionnaires are now in Austin waiting to be gathered with some 80,000 other questionnaires completed by Texas residents. All the data will be collected in New York, where the information is being compiled.

Using the same subjects, ACS research volunteers will be updating this information every other year until 1988.

Since CPS II is expected to be at the very least a six-year study, no full-scale findings will be available until 1988. However, in about two years, preliminary reports should be ready that may reveal certain health trends.

Man admits rigging

FORT WORTH (AP) — One man has pleaded guilty and two others go on trial Monday in a federal investigation of alleged bid-rigging on Amtrak contracts in Texas.

Dallas contractor John L. Guinn entered a guilty plea Friday on charges he violated antitrust and postal laws. Prosecutors contend Guinn conspired with several other people to submit fraudulent and rigged construction bids and service contracts to Amtrak, the national rail passenger operation.

Joseph Demetree and Julius Brandimarte are scheduled for trial before U.S. District Judge Eldon Mahon in the same case. Demetree and Guinn are co-owners of JLG Services. Brandimarte is a former Amtrak official.

Guinn will be sentenced Nov. 15, Mahon said Friday. He pleaded guilty to two counts of a six-count indictment and agreed to cooperate in the government's case against Brandimarte and Demetree.

Assistant U.S. attorney Mary Sewell said the government alleges Guinn and the others were awarded almost $4 million worth of Amtrak contracts to repair, renovate and service trains and stateions from Texarkana to San Antonio.

Indictments in the case allege Guinn and Demetree submitted false bids on stolen competitors' stationery with forged signatures. In his plea, Guinn admitted several of the bids were "fictitiously submitted."

education in brief

Midland high schools host first auxiliary festival

The first West Texas Auxiliary Festival was hosted by Lee and Midland high schools at the Al G. Langford Chaparral Center Saturday.

The festival included competitions for twirlers, rifle corps, flag corps and percussion sections. Tom Horst, percussion instructor for West Texas State University, judged the percussion competition, while Mark and Denise Harmon, color guard instructors at Denton High School, judged the other events.

Seventeen West Texas area schools were expected to participate in the festival.

Percussionists take first place

Midland High School's 21-member percussion section won first place in the Texas Tech Marching Percussion Contest Oct. 9.

The group, directed by Dan Green, outscored five other groups in the competition.

Orchestra, jazz band to perform

The premiere concert for the new orchestra and jazz band at Lee High School will be 7 p.m. Thursday in the Lee High School auditorium.

It is free and the public is invited.

DDC can lower insurance rates

Midland College offers a way for Midland motorists to offset most of the increase recently authorized for auto insurance rates in Texas. An eight-hour Defensive Driving Course can reduce premiums by 10 percent for a three-year period.

The Texas State Board of Insurance granted a statewide auto insurance rate increase of 14.8 percent Sept. 1. The cost increase will average about $58 for Texas motorists.

The average motorist in Texas now pays about $367 per year for auto insurance. The 14.8 percent increase will bring the cost to about $421.

"By taking the Defensive Driving Course motorists will save 10 percent on their liability portion for three years," said James Bramlett, director of the MC Community Services Department. "That's a savings of $33.40 annually, cutting the average cost of yearly premiums to $387."

Midland College will offer the eight-hour DDC course starting Monday, Nov. 1, 13, and 22 and Dec. 11 and 13.

"For the convenience of those taking DDC, we offer the course on two nights, Monday and Tuesday; three nights, Monday, Tuesday and Wednesday; or all day on Saturday," Bramlett said.

For more information, visit the Office of Community Services in the MC administration building or call 684-7851, extension 216.

Journalist will speak at UTPB

ODESSA — David Kline, one of the first reporters to view the current war in Afghanistan and a 1979 nominee for the Pulitzer Prize in international reportage, will present a lecture on the Afghanistan situation at The University of Texas of the Permian Basin student lounge at 7:30 p.m. Wednesday.

Kline's lecture, free and open to the public, is the last in a series of three programs featuring freelance writers who have reported on military activity in such areas as Indochina and Ireland.

Kline has reported from Afghanistan's rebel lines four times in the past two years, on assignment for the New York Times, Christian Science Monitor, Chicago Sun Times and Maclean's Magazine.

As one of the first Western reporters to view the war firsthand, he was nominated by the Christian Science Monitor for a 1979 Pulitzer Prize in international reportage. His articles have appeared in a wide range of newspapers and magazines in the United States and worldwide, and his photos have appeared in Newsweek, the New York Times Magazine, Time and a variety of other publications. He recently completed another assignment in Afghanistan for CBS News, the Los Angeles Times Syndicate and the Chicago Sun Times.

Kline now works as a free-lance producer for network television news and served as consultant on Dan Rather's CBS "60 Minutes" Afghanistan report. He also has written on a variety of other subjects, domestic and foreign, in Penthouse, Rolling Stone, Boston Globe Magazine and other publications.

He lectures widely at colleges, universities and foreign affairs institutes on Afghanistan and South Asian affairs, as well as on free-lance journalism. He has appeared on numerous television and radio talk shows.

A-V materials may be previewed

Films and other audio-visual materials available to public schools through Region 18 Education Service Center may be previewed by parents and other interested adults during a one-day review session Oct. 28. The session is scheduled from 8 a.m. to 4:30 p.m. at the center, located on LaForce Boulevard at Midland Regional Air Terminal.

Parents and other citizens interested in requesting preview of particular films from the collection maintained at the service center should notify the center at least eight days in advance so the staff will have time to check on the availability of the films and set up preview rooms. In the event a film is not available on the date requested, the person making the request will be given a date on which it may be seen.

Persons wishing to request previews of films may call Vera Smith, staff member, at 563-2380. The name of the film requested and the approximate time the person will arrive at the center should be given to Mrs. Smith.

UTPB will offer tax workshop

ODESSA — An introductory tax workshop for the small business is scheduled at the University of Texas of the Permian Basin Devonian Room from 6 to 9:30 p.m. Monday. Registration fee is $25.

Dr. Patricia Williams, instructor of accountancy and information systems, is conducting the course, which will include an orientation to business taxes and practical exercises in business taxes. Workshop participants will be provided with all necessary materials.

"The workshop is designed to provide only an introduction to business taxes and to give the new or prospective owner of a small business a brief introduction to the federal taxation responsibilities," she said.

Topics to be discussed include employment taxes, employer's quarterly federal tax return and the federal unemployment tax return. Also to be discussed is the tax equity and fiscal responsibility act of 1982 as it pertains to small businesses.

To register or for more information, contact Dr. Williams at 367-2162.

MHS homecoming activities set

Midland High School's homecoming festivities will begin with a parade through downtown Midland at 3 p.m. Thursday. A bonfire and pep rally are scheduled at 7:30 p.m. in the west parking lot of Midland High School.

At 8 p.m. Friday, the Bulldogs will host San Angelo in Midland Memorial Stadium. The MHS homecoming queen will be crowned at halftime and parade floats will circle the field.

A homecoming dance will begin at 8 p.m. Saturday at the MHS Youth Center. Theme for this year's homecoming is "Color My World."

Institute given $1,000 donation

BIG SPRING — The Southwest Collegiate Institute for the Deaf here received a $1,000 donation for unrestricted tax-exempt purposes from the Harry S. and Isabel C. Cameron Foundation in Houston, according to Dr. Charles Hays, president of the Howard County Junior College District.

The contribution was in response to a request for funds for dormitory furnishings at SWCID. According to Dr. Douglas Burke, director of transitional planning and development, "SWCID has a wide range of needs for which we are seeking private funds." Since the state monies allotted for SWCID are for instructional purposes only, additional resources are needed to cover needs such as dormitory furnishings.

Hays, in announcing the contribution, remarked, "We are very pleased and grateful to the Cameron Foundation. SWCID is a new college, the world's third college for deaf students. The Cameron Foundation's donation will be valuable in helping SWCID meet its goals."

Scout troops set open houses.

More than a dozen Boy Scout troops will open their doors to new members Monday and Tuesday.

Boys ages 11 to 17 are invited to join during the annual Scout Roundup. Scout troops are celebrating World Scouting's Diamond Jubilee this year. The Scouts will be participating in a week-long winter camp in the Davis Mountains, the annual Scout Exposition and a World Jamboree in Canada this summer.

The Scout troop open house schedule will be Troop 233, Monday, 7:30 p.m., Memorial Christian Church, 1001 Andrews Highway; Troop 84, Monday, 7:30 p.m., Episcopal Church of the Holy Trinity, 1412 W. Illinois Ave.; Troop 160, Monday, 7:30 p.m., St. Luke's United Methodist Church gym, 3001 W. Kansas; Troop 126, Monday, 7:30 p.m., Trinity Presbyterian Church, West Louisiana and Andrews Highway; Troop 211, Tuesday, 7 p.m., West Side Lions Club building, alley off Midland Drive at northeast corner of Midland and Thomason; Troop 333, Monday, 7:30 p.m., Midland Lutheran Church, 2711 Michigan Ave.; Troop 231, Tuesday, 7:30 p.m., L.D.S. Church, 2101 Tarleton; Troop 270, Tuesday, 7 p.m., Elks Lodge, 2501 W. Illinois; Troop 96, Tuesday, 7 p.m., Rotary Scout Hut, 3500 Cunningham; Troop 85, Tuesday, 7 p.m., First Presbyterian Church basement entrance on Illinois; Troop 111, Tuesday, 6 p.m., Center YMCA.

The Cub and Boy Scout program, for boys ages 8-17, is also in need of more volunteer leaders. For more information on leadership opportunities or youth membership, contact the Buffalo Trail Council at 684-7171.

Old mail stop memorialized

By PATRICK DEAREN
Staff Writer

On Sept. 22, 1858, the wheels of the first westbound Butterfield Overland stage rumbled to a halt on the mesquite-shrouded banks of Chimney Creek 13 miles west of modern-day Albany in the midst of a 24-day blitz that would carry it from St. Louis to San Francisco.

In a sharp bend of the small creek lay a brush corral and the overseer's tents — later to be replaced by a stone building — where the passengers partook of supper while a fresh team was acquired. Within minutes the stage forded the stream, heading for a nighttime rendezvous with the horizon and leaving behind what would become known as Chimney Creek Ranch.

It was known as Smith's Station, this one stop among many on the southern route of the Butterfield Overland Mail whose coaches would speed across prairie and mountains, desert and badlands for the next 2½ years.

Saturday, 121 years after the scourge of the Civil War halted the stages and caused the abandonment of Butterfield's Texas route, the Shackelford County Historical Commission and guests of ranch co-trustee Chan Driscoll of Midland gathered to dedicate an official Texas historical marker at the site of Smith's Station.

"I accept this Texas Historical Commission official marker with a great deal of humility, gratitude, respect and pleasure," said Mrs. Smith, who shares trusteeship with Midland National Bank, which holds the title. "I accept this marker for the Smiths who lived here 124 years ago, for the six owners of it before my grandfather...and for any of those who lived a portion of his life in the 100-year-old house at the ranch headquarters."

The initial owners of the land where the last vestiges of Smith's Station lie were George B. Horsefull and John F. Horsefull, who passed the property to A. W. Rhodes on June 19, 1883. Between that date and 1920, when it was purchased by Mrs. Driscoll's grandfather, G.R. Davis, Chimney Creek Ranch was variously owned by Joseph Kile, R.B. Thompson, Virginia A. King and Ella M. Conrad.

The first westbound Butterfield stage departed St. Louis Sept. 16, 1857, and carried only one through passenger, Waterman L. Ormsby of the New York Herald, who recorded that historic first stop at Smith's Station.

"Our next stopping place was at Smith's Station, 23 miles from Clear Fork, on the banks of a small creek," he wrote. "No house had been built yet, those at the station living in tents. They had nearly finished a fine corral for the stock, making it of brush (as no timber could be had) and filling in the chinks with mud. Our supper consisted of cake cooked in the coals, clear coffee and some dried beef cooked in Mrs. Smith's best style. We changed horses or mules, passing numerous herds of antelope on our way," wrote J. M. Farwell. "To Clear Creek is 25 miles, and as a whole the road may be called good, though it is intersected, along the last drive, by a number of deep gullies. Deer and turkeys are abundant; the latter we see in flocks of 20 to 40."

William Tallack, a passenger in 1860, recorded that the driver once had to wait half an hour in the vicinity of Smith's Station to let a buffalo herd cross the wagon road.

Joseph E. Blanton of the Shackelford County Historical Commission, who has inspected the site at Chimney Creek Ranch, noted that "two lines of rocks at the ground surface which corner at the tree are obviously the bases of what were once stone corral fences or the walls of a stone building."

Little other signs of the historic station remain.

A "Prairie Party" with a barbecue supper and fiddle music provided by Pat Saddler of Graham followed the dedication ceremony.

Library friends collect $8,500

By ED TODD
Staff Writer

Friends of the Midland County Public Library netted approximately $8,500 in its 15th annual benefit book sale last weekend, and 12-year-old Utah librarian Jason Hardman wound up with 19 choice books from the sale.

The used-book sale, which benefits the Midland County Public Library, grossed $9,224.83 in three days, noted Rob Sutphen, Friends treasurer. Of that amount, $6,163 was taken in on the three-hour early-bird sale in which 450 book lovers paid $2 each for browsers' first grabs on the first night of the sale.

As a rule, hardback books sold for $1 for three volumes or 35 cents each, paperbacks went for four for $1 and magazines sold for 25 cents each. Better books sold for from $1 each to $10 or more, but most were priced around $2 or $3 until the sale's last day, when the prices were cut in half. Other books then were sold for $1 a yard, magazines were free, though the Friends requested donations, and in the final minutes of the sale, better books, too, went on sale for $1 a yard.

Last year's sale grossed $8,597.14.

Funds go toward purchasing library equipment, material and scholarships and other library expenses not covered by the library's county budget.

"We are very grateful to the donors of books and magazines and to the book buyers," said Friends president Mary Lou Cassidy. She also expressed appreciation to the Community Gold, a group of young people who aided in the book shuffling and stacking, and to the Museum of the Southwest, which allowed use of its Lancaster House for storage of books until they could be moved into the Midland County Exhibit Building, where the sale was held.

After the sale was over, many of the better books were returned to the Lancaster House until next year's sale. And several boxes of leftover paperback books, including fiction and non-fiction, were given to the Midland County Jail for use by inmates.

And 19 choice books were selected by Midland County Librarian John Deats, who shipped them off to Hardman, the youth who is starting up a library at Elsinore, a Utah town of about 640 people.

"He showed lots of initiation," Deats said of the boy, who gained nationwide publicity in his efforts to establish the library.

"We tried to pick out some of the nicest books that were left over," Deats said.

In a letter to his younger fellow librarian, Deats noted that "We (the Friends) hope these books will be of use to you and your patrons. The best of luck to you, and congratulations on a job well done!"

Two fined, on probation

FORT WORTH (AP) — Two Dallas residents have been fined and put on probation after admitting they conspired to help Korean steelmakers avoid paying import duties on steel sold in the United States.

Billy Wayne Badgett, president of Dallas Pipe and Supply Inc., and Mary Catherine Kell Zeek, a former employee of the company, were fined $1,800 and given two-year probated sentences Friday.

U.S. District Judge Eldon Mahon also fined the company $7,500.

Dallas Pipe and Supply records reflected falsely inflated prices for steel bought from a Korean firm, and the company received kickbacks on those orders, prosecutors charged.

P.O. Box 1650, Midland 79702

My sister and her husband are deceased. They did not have a will, but they have two small children who are now living with my sister's in-laws, who were made legal guardian. I know that the estate went into trust funds for the children and that their guardian gets a total of $600 per month for both children from Social Security.

My question is how easy is it in the State of Texas for the guardian to obtain money from their trust fund? — D.F.

ANSWER: Gary Ayme, trust officer with The First National Bank, says that in order to provide a definite answer to your question, the trust agreement would need to be examined.

However, he did say that the majority of trust agreements do have provisions for the invasion of principal and income. The agreement would specify who was appointed to administer the trust agreement, whether it be a bank or otherwise. In the event the bank was appointed, money requested by a guardian would be determined through a Probate Court request and decided by the judge.

Usually, Ayme noted, in the event of the need of money for such items as medical expenses for the children, the money can be provided through the income provisions of the trust agreement. He also pointed out that it is much easier to obtain funds from the income provisions than the principal, which is protected for the children.

Can you find out the dates for a tour of the Guadalupe Mountains? I think the tour is sometime this month. — J.W.

ANSWER: You may be talking about the Annual Fall Color Tours of the Guadalupe Mountains originating in Carlsbad, N.M., and scheduled Oct. 30-Nov. 14.

Contact the National Parks Highway, Carlsbad, N.M. 88220, telephone 505 885-8884.

I've been thinking about converting my present straight life policies to paid-up policies, so I won't have to keep paying premiums after I retire. If I do that, though, will I still be able to borrow on the policies for emergency cash? — G.F.

ANSWER: Yes, your paid-up policies would have cash values, as they do now, on which you could borrow at any time, says The American Council of Life Insurance. In fact, the cash value would grow larger each year.

PBRPC meets Wednesday

The Permian Basin Regional Planning Commission will hold its regular monthly meeting at 1:30 p.m. Wednesday in the PBRPC conference room at Midland Air Terminal.

The agenda includes consideration of a resolution accepting review and comment of the Regional Development Review Committee on a grant application from West Texas Opportunities to the Department of Health and Human Services for continuation funding.

It also includes review and comment on a grant application from Texas Group of New Mexico for approval of Quail Glenn Subdivision, an 84.9 acre development located 2½ miles south of Interstate 20.

Nursing homes lack safety systems

AUSTIN (AP) — About 100 Texas nursing homes don't have federally required sprinkler systems that one state official says might have saved two elderly residents of a Pampa facility that burned last weekend.

The Texas Department of Health waived requirements for the sprinklers on grounds that the facilities met federal safety standards in other ways.

A 1979 law prevents the state from rescinding the waivers, which are allowed by federal law.

"We have problems with granting them and would like to change it," said Roy Crenwelge, chief architect of the health department's Life Safety Code division.

But he said many small, "mom and pop" operated nursing homes would have gone out of business without the waivers.

Pampa Nursing Center residents John McKinney Bentley, 75, and Bertha McCreary, 89, died because of smoke inhalation and six other residents and an employee were injured because of the fire set in the north wing of the U-shaped building last Sunday.

"I think we were awful lucky that most of the patients weren't in that part of the (Pampa) nursing home" where the fire started, said Crenwelge, who added some of the deaths and injures may have been avoided if a sprinkler system had been installed.

"I think with a sprinkler system we would have had steam going down the hallway and not thick smoke," he said.

Jerry Bryant, director of the department's quality standards division, said that the nursing home met the federal Life Safety Code standards and that the facility's fire safety equipment worked properly.

National Living Centers, the Houston-based nursing home chain that owns the Pampa home, got a sprinkler waiver in 1974 on grounds that it had installed sprinklers in "hazardous" areas, such as the kitchen and laundry, that it had automatic fire detection devices in all areas without sprinklers, that the patient rooms were constructed to resist fire for at least an hour and that the fire department would respond within five minutes.

According to a 1980 health department report, the sprinkler system would have cost the company $40,000 and taken four months to install.

The administrator of the Pampa home declined comment on both the fire and its lack of a sprinkler system.

PAINLESS PERMANENT
HAIR REMOVAL
You don't have to take our word for it! Read what medical experts have to say about the "no needle" electronic tweezer method of hair removal.
From Iris M. Krupp, Ph.D., M.D., Dermatology and Allergy:
"Epilation using a fine platinium needle is a painful and very time-consuming process. Patients find it difficult to tolerate more than thirty minutes of treatment and it requires a skilled, experienced operator.
When this technique is contrasted to epilation with the Removatron, there is a striking difference. The Removatron technique requires minimal training for the oprator and is painless for the patient. It is more rapid technique, in that a larger area can be treated in a given time. Delicate areas, such as the aerola of the breast can be treated without discomfort to the patient. Patient acceptance is striking and they are enthusiastic with the results.
I am quite pleased with the instrument and have only positive feelings about it".
from Melvin A. Shiffman, M.D.
"I have studied the method as a medical doctor, both clinically and with biopsy means. The evidence that the machine does work is clearly available and proven.
Biopsy specimens following removal of hair by the method show incontrovertible proof of thermal damage to the hair follicle. This refutes all previous claims by various individuals and associations that removal of hair by the electronic tweezer method shows no evidence of thermal damage and is no more than simple plucking of the hair".
If you have any questions about removing your unwanted hair painlessly and permanently, call us for FREE consultation and demonstration. It is the intelligent thing to do.

CRMWD revenues ahead

BIG SPRING — For the first three quarters of this year, the Colorado River Municipal Water District is running well ahead of the same time a year ago in both revenues and expenses. The good news is that revenues have risen faster than expenses, according to a news release from headquarters here.

Three reasons are cited for greater revenues: sale of more water, higher rates and earnings on bond transactions. Revenues through September amounted to $8,401,160, up $1,731,000 from a year ago. Expenses of $5,008,277 were up $1,296,000, leaving $435,000 more on the plus side. This is handy, according to the release, for 1982 is the peak year for debt service requirements.

September revenues of $1,091,005 marked the first time the district received more than $1 million in a single month.

For the initial three quarters of the year, cities paid $6,867,668, which was $370,000 over budget projections. On the other hand, oil companies paid $1,161,663, or $98,000 less than estimated.

Water sales of 14.43 billion gallons were up 664 million gallons, or 4.82 percent. The September total of 1.809 billion gallons was up by 7.26 percent over 1981.

Although electricity costs of $3,453.187 were up by $674,000 for the period, they were $272,547 less than budget estimates for nine months. This was due to pumping patterns which necessitated heavier pumping during the summer from Ward County well field to keep up with west-end demands. A year ago, 13.92 percent of the water came from Ward County; this year it was 20.71 percent, which was a gain of 6.79 percent on the cheapest water to produce. Also, there was 3 percent less water from Lake Spence, the costliest water to produce and deliver.

Y offering glamour program

The Alamo YMCA is offering a "Totally Beautiful Woman" class beginning Oct. 26

The class will meet for four weeks, two hours a week. Morning classes are from 9:30 to 11:30 a.m. and evening classes will be from 7 to 9 p.m. Tuesdays.

The course fee will include basic wardrobe instruction, make-up application, hair care and styles, manicure and pedicure procedures, tips on beauty and skin care and a luncheon at Ranchland Hills Country Club.

The fee also includes a professional glamour photographer from "D" Production Studio who will take portraits upon request. They will be printed before Christmas.

YMCA membership is not required. The Y has a nursery available.

Bring your own make-up and let T.J. Ford and Tony Botary help you look glamorous.

For more information call the Alamo Y at 694-2528.

Candidates' nights set

The Permian Basin chapter of Texas Women's Political Caucus and local groups of League of Women Voters will co-host a "Meet the Candidates" reception at 7:30 p.m Monday at Energas in Midland. The same event will be held at 7:30 p.m. Oct. 25 in Odessa at the University of Texas of the Permian Basin.

The event is free and the public is invited.

Additional information may be obtained from Karen Marshall, 333-7111, extension 567 or 568.

'Deathtrap' has many twists, turns

Mystery connoisseurs who particularily enjoy a twisting, turning plot combined with good dialogue can find just such an evening's roller coaster ride at Theatre Midland.

Ira Levin's "Deathtrap" opened in Theatre I Friday night. A writer of novels and plays, Levin has a list of credits to his name which includes "Rosemary's Baby," "A Kiss Before Dying," "The Stepford Wives," "The Boys from Brazil," "Critic's Choice," "Drat! The Cat!" and "Veronica's Room."

"Deathtrap" was first presented on Feb. 26, 1978, at the Music Box Theater in New York City. Midland Community Theatre has tried

A Review

to secure the rights to produce it for the past three years, listing it as part of its season offerings and then withdrawing it. The theater just recently obtained the rights to produce the play. So "Deathtrap" has received local publicity for the past three seasons.

For a Broadway hit made into a movie, both of which received national publicity, one would expect a full house. Such was not the case. The house was only three-fourths full.

ONE OF THE major ingredients of this genre is the ability to keep the audience on the edge of its seats throughout the evening. Again, such was not the case.

Yes, the dialogue is good. "Deathtrap" contains numerous funny lines and plays on words which work — the audience laughs.

Yes, the plot takes many twists and turns. The dialogue discusses each new angle, then the action happens (generally minus the surprise). The twists and turns evolve rapidly, carrying the audience along each new avenue, laughing.

Perhaps it should have been billed as a comedy mystery, not as a mystery thriller. Although the play contains action, it almost talks itself to death.

"Deathtrap" has one scene where the audience is taken completely by surprise. One. It's a good one (very good). There are some startling moments, but otherwise it's not scary.

SO FOR THOSE going to the theater for a good, old-fashioned mystery thriller, the kind where the suspense builds from scene to scene until it can be felt in the air, it isn't there. At least it wasn't opening night at MCT.

Part of the problem may have been inherent in the script because to carry this play off in a manner which heightens the suspense requires perfect timing and total belief on the part of the players. Allowing for opening night gitters, several cast members weren't there yet. They were still acting their respective parts, rather than being the character they were portraying.

The local cast includes Charles Dixon as Sidney Bruhl, Penny Taulman as Myra Bruhl, Gary Swisher as Clifford Anderson, Mary Lou Cassidy as Helga ten Dorp and Jerry Green as Porter Milgrim. Director for the production is Ted Strickland, MCT's assistant director. Stage management was provided by Jack Cox with Ruth Price and Jan Matthews as his assistants.

DIXON AND Miss Cassidy stole the show with Green turning in a very respectable cameo performance (especially his first scene).

Miss Taulman started weak. It was unclear if she was playing a character who is afraid of life, or if she had a case of stage fright in the opening scenes. At the play's inception, she didn't know what to do with her hands, so she settled on wringing them incessantly (Perhaps from the movie? Dyan Cannon?). As soon as the first crisis hit, she became much more convincing onstage, turning in an outstanding job of portraying someone who was terrified by the events happening around her.

Swisher had the reverse problem. He waved his arms so much that the desire hit to tie them down. He also had a problem in delivering his lines. On more than one occasion, his inflection was on the wrong word thus leaving the listener unconvinced when he spoke. His strong points occurred in the actual actions scenes, where he stayed in character.

None of the cast delivered their lines with ease. This can be attributed to opening night jitters; however, there was a problem in Scene I of Act I which started the night off on an uneven pace.

Apparently a prop was missing. It is to Dixon's credit that when he discovered the letter he was looking for was not there (a mystery within a mystery), he moved on and recreated the letter verbally. He handled the situation very well, but it had to be nerve-racking and certainly could account for his and Miss Taulman's timing being off in the opening scenes.

MISS CASSIDY was as funny as she always is. Her performance added much needed energy and life to the stage. But once again this is billed as a thriller, and at no time did she seem genuinely frightened or menacing. (She did a great curtain call.)

The set is from Dallas Theatre Center and was adapted to fit the stage at Theatre I.

Costumes were appropriate with one exception. Since everyone was warmly clad (It is doubtful that Miss ten Dorp, who is from Holland, would find it necessary to wear boots and heavy socks in Connecticut unless it was cold.), and the action takes place in the Bruhl's home in Westport, Conn., it seemed out of place (and out of character) for Mrs. Bruhl to wear open toed strap heels with a sweater on her shoulders.

The play contains limited profanity which may be offensive to some.

— GEORGIA TEMPLE

Staff Photo by Cody Bell

Psychic Helga ten Dorp (Mary Lou Cassidy), center, warns Myra Bruhl (Penny Taulman) and her husband, Sidney (Charles Dixon), about the dangers she sees in the study of their home in this scene from Midland Community Theatre's production of Ira Levin's "Deathtrap." The play opened Friday for a nine-performance run. Reservations may be made by calling MCT's box office at 682-4111.

Musician has success with multitracking

By The Associated Press

Steve Winwood, come to America to promote his solo Island LP, "Talking Back to the Night," has the idea to put a band together, tour with it and make his next LP with the band.

After 12 years on the road, he hasn't been in a band since 1974.

First he was in the Spencer Davis Group, which had its first hit in 1964, playing keyboards, guitars and singing; then Traffic, with Chris Wood, Jim Capaldi and Dave Mason; then Blind Faith, with Eric Clapton, Ginger Baker and Rick Grech — a supergroup which lasted for only one album, then four more years of Traffic.

"The urge to get a band and go on the road has got to me a bit," Winwood says. "I don't have any pressure to do it. I always think that's the best incentive — that you want to do it rather than someone else wants you to do it.

"I've been to a few concerts, and I caught myself thinking I would really like to be on stage doing some playing."

IN 1974, Winwood recalls, "I felt I was never ahead. When the tour finished, there was pressure to make an album and try to find time to write. Then there was pressure to tour again. I decided the only way I could escape from that was not to have a band."

Winwood made his first solo album, "Steve Winwood," for Island, in 1977. He says, "It wasn't successful at all. The writing left a bit to be desired.

"After that, things were pretty desperate for me one way or another. I worked with a couple of African musicians; the Fania All Stars, a Latin band from New York; with a Japanese percussionist, with a German synthesizer player.

"I was interested to learn from other people's things. But none of those were successful."

After the first, non-selling, solo album, Winwood says, "I thought I had to do something fairly radical. I thought if I could get the right material I could do it on my own. I always toyed with the idea of multitracking. I'd done it in various half-hearted ways on different albums. I got a lot of opposition from the publisher and the record company. I'm sure that spurred me on a bit.

"I sunk nearly all the money I'd got at the time in building a studio with fairly basic equipment in my house. I couldn't afford to record anywhere else, and no producer would have wanted to work there. I thought I'll do it alone, write, sing, play all the instruments.

"IT WAS VERY tortuous — so much work and it took so long. I was convinced at the end of it that the publisher and record company must be right."

Then the album, "Arc of a Diver," became the most successful Winwood ever had.

"I had to reconsider things," he recalls. "Maybe I had a way of making an album which gets well accepted. So I thought I'd give it another shot." The result was "Talking Back to the Night," released at the end of August.

Winwood worked with American lyricist Will Jennings on it. They also wrote four songs on "Arc of a Diver." He says, "I met Will through my American publisher.

"I found it very interesting to work with someone who has worked in a competitive writing atmosphere like Nashville. He doesn't sit around waiting for inspiration. He sits down and works all the time."

Rather than one presenting the other with a finished melody or finished lyric, they "build" their songs together.

THERE HAS been criticism that the songs on "Arc of a Diver" are more adventurous than the ones on "Talking Back to the Night." Winwood says, in his usual calm tone of voice, "I've heard that said. It's valid as a first listening thing. Definitely 'Arc' had a surprise value. I think on this album the writing is better and more fluid.

Mr. Jack Daniels Original Silver Cornet Band, circa 1982, will recreate the nostalgia of turn of the century outdoor town square concerts beginning at 8 p.m. Tuesday when Midland Community Concerts kicks off its 1982-83 season. The show will be held at Midland High School Auditorium with tickets still available for the season.

Tour of 20th Century-Fox studios disappointment

By LEE GRANT
Los Angeles Times-
Washington Post News Service

HOLLYWOOD — Twentieth Century-Fox, the studio whose history is dotted with such memorable films as "Grapes of Wrath," "How Green Was My Valley," "Cleopatra," "The Sound of Music" and "Star Wars," has opened its doors to the public. But the drama is missing.

Arranged in conjunction with the Gray Line company, tours began July 1 and will be conducted year-round on weekdays.

Visitors get a rather vacant two-hour peek at a historic studio that some say is destined to eventually be torn down to make way for still more expensive condominiums.

A recent look at the tour, which cost $15.75 (20 percent of each ticket goes to Fox) including transportation by Gray Line from local pickup points (walk-up business at Fox is a no-no), found it basically dull and shallow, a stroll past buildings with little emphasis on the studio's past or future.

Unlike the Universal Studios Tour — part theme park, part behind-the-scenes tram ride and Fox's dreaded competition — 20th Century-Fox officials claim their attraction is a "hands-on look at a working studio."

DURING A recent visit, however, there wasn't much work being done. The studio's major TV shows, including "MASH" and "Trapper John, M.D." were not filming and coming movies like "The Buddy System" with Richard Dreyfuss and "Star Chamber" with Michael Douglas had moved to exterior locations.

Despite that, the young college-kid tour guides were uniformly peppy, even hyperenthusiastic. A group of 16 tourists staying at a variety of Hollywood motels and hotels were picked up by a Gray Line bus between for the trip to the West Los Angeles studio.

The day was warm and those boarding the bus wore the uniforms of summer — tank tops, shorts, sandals. The driver was chatty, dispensing a mixture of incidental information, including restaurant recommendations, all with a kind of bitter and judging undertone about the monied people of Hollywood.

Snaking through Hollywood, the icy, air-conditioned bus was quiet except for occasional remarks by the driver.

Finally, pulling onto the studio lot, the tourists from Holland had their $100 bills out to pay for tickets. A fresh-faced young woman climbed aboard the bus: "Hi, my name's Claire. I'll be your guide today. If you wander off the blue lines or get lost, we'll have to have a security guard escort you back to the bus. It's a busy studio."

The covey of guides wore white shorts, blue or pink shirts with 20th Century-Fox logos and long white socks. The woman from Gray Line who took the money said, "Here's your souvenir brochure." It was a cheaply made flyer with a complex studio map and promotional blurbs for current and coming TV shows and motion pictures.

CLAIRE TURNED out not to be this group's guide after all. Instead, it was friendly Connie, a redhead.

The first part of the tour was up "Dolly" street near the studio's entrance off Pico Boulevard. It was used for the parade scene in the 1969 flop "Hello, Dolly!" starring Barbra Streisand.

Connie sounded for the most part like a tape recorder, reciting anecdotes and facts by rote. "These are sound stages," she said. "For those of you who don't know what a sound stage is, that is where our interior filming is done. On sound stage 21, 'Star Chamber' was filmed. It's a very promising movie for this year; go see it.

Highlight for the tourists was a visit to the "MASH" set. "This is the actual 'MASH' sound stage," said Connie, "but we won't see anything because they don't start filming for some time yet." Then, she added, "Please be careful, it's a real sound stage with cords on the ground and everything."

A moment passed and Connie said. "This is Loretta Swit's, Hot Lips' tent." A voice from the back of the group: "Wow!"

There was a half-hour break for lunch. "This is the commissary," said Connie. "If you see any actors or actresses, please don't ask for autographs. This is their job." No stars were seen.

The "souvenir menu" featured " 'Sound of Music' Croissant,' " " 'MASH' Burger," " 'Hello, Dolly' Sandwich," " 'Nine to Five' Ceasar Salad" and "Marilyn Monroe Cheesecake." Lunch was not included in the $15.75 tour price.

THE TOUR'S last half seemed rushed. Observation from Connie: "Over there at the top of that gray building was Marilyn Monroe's dressing room when she was here on the lot. She did a movie called "Scudda Hoo! Scudda Hay!" (1948) but you'll never see her in it — because she was edited out. They didn't know how big a star she would become."

Passing by an alley — "It was used for the opening scene of 'Starsky & Hutch,' where one of them jumps down from the roof. I don't remember which." Someone on tour yelled it out: "Hutch." These people knew their television.

Next stop was the Little Theater "where all the dailies are shown — the scenes filmed over a specific day," said Connie. Three other tour groups also arrived.

Inside, it was a break from the withering sun. Featured was a scratchy two-or-three minute clip from "Hello Dolly!," the parade scene along "Dolly" street, an ample illustration of why the movie was a box-office flop.

Leaving Western Street, where portions of "Butch Cassidy and the Sundance Kid" were filmed, tour guide Connie expressed the feelings of many on the tour — she yawned.

That was it, the tour over exactly two hours after it started.

Back in the studio a few days later, three 20th Century-Fox executives in charge of instigating the tour were thrilled that a crew from an entertainment-oriented television program had shown up.

THE EXECUTIVES were Marc Pevers, vice president, licensing; Danny Simon, director of special projects, and Jerry Greenberg, vice president, corporate communications.

The studio, they said, had been spruced up for the tours — new shrubbery here, a tattered building repaired there.

The men were rather defensive about the Universal Studios tour, which is cheaper ($9.75 not including, of course, Gray Line transportation).

"We are aggressively looking at new areas and to enhance the corporate image," Pevers said. "Of course, it's nice to make a profit but that's not the bottom line with the tours. We're not trying to compete with Universal. That is a tremendous operation but it's a theme park. Ours is more like the VIP tour at the Burbank Studios — a small group of people walking onto working sets."

Artist finds beauty in many things

By GEORGIA TEMPLE
Entertainment Writer

Her voice catches the ear's attention. The accent is hard to place. It sounds like a voice which has had exposure to many places in different lands.

It has.

Although artist Jeannette Ulrich has lived in the United States for over 20 years, her accent is decidedly not U.S. A native of Chile, Miss Ulrich has lived in the Eastern United States as well as Europe. She has just recently become a Midland resident.

The path which led her here from New York began in Honduras, where she met a Midland resident.

"He commissioned me to do some paintings. Then he commissioned me to do some paintings here (Midland). And then I just liked Texas very much; it has good people and nice weather," Miss Ulrich said of her recent move to Midland.

Miss Ulrich has offerred her services to Midland College where she will begin teaching an art class Monday night.

"I will be giving a class in still-life and portraiture," Miss Ulrich said. "This course is good for any level student because it is a personal approach to every student."

Miss Ulrich's educational background includes the Escuela Nacional de Bellas Artes in Lima, Peru, and the Art Students League and Parsons School of Desiginin New York City. Her works have been shown in galleries in the United States, Italy and South America.

"I stress the Old Masters method and bring it around into a modern light," Miss Ulrich said of her teaching methods and her paintings.

"There are many schools of art that I like, old master and modern, and I don't see why they can't be incorporated. I like to break away from the cliche that only certain things are beautiful. I can find beauty in something like a garlic. To me, it is like a string of pearls."

Miss Ulrich perhaps most enjoys painting still-lifes and portraits.

When asked about her fascination with still-lifes, she said: "The term still-life describes itself very accurately. The inanimate object has life within itself but does not participate in an active way. They contain and transmit a passive serenity that becomes apparent on canvas."

Of portrait work Miss Ulrich said: "A portrait is a vibrant source of energy. The rapport between the sitter and the artist can be at times more important than a flawless technique. The perfect portrait should consist of different multiple images of the subject showing the different facets of the personality."

The style of her paintings falls into the school of realism.

"I think realism chose me," Miss Ulrich said. "I have tried several times to venture in other directions, always experimenting, but I found out that I wasn't being true to myself.

"I might also have inherited my love for this style from my grandfather, Charles Frederick Ulrich. His work is in (among others) the Metropolitan Museum, the Rockefeller Collection and The Corcoran in Washington."

Miss Ulrich also plans to open a studio/gallery in Midland shortly. In the meantime, she will be conducting workshops and demonstrations in area art galleries. She will teach one such workshop at the Paint and Palette Club in October.

For her there is no other choice in life than to paint. As she said, "I can't conceive ever having to live without ever painting again. It is an addiction that gives me physical and emotional pleasure. The creative mind is self nourishing and stays young forever."

Staff Photo by Cody Bell

Artist Jeanette Ulrich sits in front of several of her works. Miss Ulrich has just recently moved to Midland from New York City and will be conducting an art class at Midland College beginning Monday. The class will meet in the evening from 7 to 9 p.m. For more information call MC's art department.

Diamond at top of chart

By The Associated Press

The following are Billboard's hot record hits for the week ending October 23 as they appear in next week's issue of Billboard magazine.

Veteran actor to be in 'Lampoon' movie

By BOB THOMAS

HOLLYWOOD (AP) — "I suppose you'll write: 'Eddie Bracken Makes Comeback!' But how can I come back when I've never been away?" says the veteran show business personality.

It's true that Bracken has been in the entertainment business ever since he emerged as a bright young comedy actor in Broadway hits of the late 1930s. But it's also true that he is making his first feature movie since he and Mickey Rooney appeared in "A Slight Case of Murder" in 1953.

The new film is Warner Brothers' "National Lampoon's Vacation," starring Chevy Chase, Beverly D'Angelo, Imogene Coca and Christie Brinkley. What does he play?

"Walt Disney," he replies. Well, not really. The character is the creator of a huge theme park, but he is called Roy Walley. With his pointed moustache, Bracken makes a passable Disney.

Except for the moustache, Eddie Bracken seems little changed from years when he was romping through a string of hit comedies at Paramount. His film career started as Henry Aldrich in "Life with Henry" in 1940, then his antic style made him Preston Sturges' favorite. They collaborated on "Hail the Conquering Hero" and "The Miracle of Morgan's Creek."

Other Bracken films: "The Fleet's In," "Caught in the Draft," "Sweater Girl," "Hold That Blonde," "Two Tickets to Broadway," "About Face," "We're Not Married."

"I was under contract to Paramount for 10 years," the actor says, "and I also worked at every studio in Hollywood. Except Universal. I almost worked there. I haddropped out."

Donald O'Connor played the lead in what turned out to be one of Universal's most profitable series.

Never a part of the Hollywood establishment and often at odds with studio bosses, Bracken left in 1953 to return to the theater. His credits are prodigious: "The Seven Year Itch," "Teahouse of the August Moon," three years in "Hello, Dolly" with Carol Channing, and dozens of other comedies and musicals. Lately he has been touring in the musical, "Sugar Babies," and for a time he replaced Mickey Rooney on Broadway.

"I've done 10,000 performances in the legitimate theater," said the 62-year-old Bracken. "But I don't think of myself as working in one area. The stage is in one corner, motion pictures in one corner, television in another. I work the whole room.

"The only time I've been away from performing was when the string of theaters that I organized went broke because of mismanagement. That was a $2 million loss, and I spent a year getting it settled."

Bracken also organized a successful advertising agency in Houston, then sold out because of his acting commitments. His latest enterprise is an ambitious plan to convert the former jai alai arena at Reno's Grand Hotel to a Broadway-style theater.

"This time I'm financing the only way to go, with OPM — Other People's Money," he said.

Bracken and his wife, Connie, have been married 43 years, have five children and seven grandchildren. The Brackens make their headquarters in Weehawken, N.J., where one of their daughters lives.

"But our real home is 'somewhere on the road,'" he says.

King Olav treated to Louisiana gospel jazz

NEW ORLEANS (AP) — A little bit of Louisiana gospel jazz brought a smile from King Olav V of Norway, also treated to bayou specialities like jambalaya and Mardi Gras art during a visit here.

The king, who headed to Florida on Saturday, attended a special jazz service at the Norwegian seamen's church, whose cornerstone he laid during his first U.S. visit as king in 1968. It was King Olav's third visit to the city and part of his 12th visit to the United States.

King Olav sat impassively during the church service, smiling only as the William Davenport Gospel Singers and Percey Humphrey and his Crescent City Joymakers blared out such traditional spirituals as "Down by the Riverside" and "When the Saints go Marchin' In."

Earlier Friday, the 79-year-old king toured a remodeled Norwegian seamen's center in the Mississippi River town of Gonzales. He was greeted by 20 first graders waving flags. A high school band played Norway's national anthem.

Gov. Dave Treen presented the king with a framed Louisiana bayou scene and Mayor Nelson Roth gave him a plaque depicting a pot of jambalaya, a spicy, savory rice dish.

Midland seniors praised

Eleven Midland seniors have been commended in the 1983 National Merit Scholarship Program. Letters of commendation will be presented to the students, who placed in the top 5 percent of participants in the 28th nationwide competition.

Commended from Lee High School were the following students: Stacey T. Bradshaw, son of Mr. and Mrs. Warren M. Bradshaw of No. 4 Stutz Court; Tod A. Brown, son of Mr. and Mrs. Dale A. Brown of 3625 Hyde Park; Pam K. Gibbs, daughter of Mr. and Mrs. Sam A. Gibbs of 2826 Marmon; Susan E. Hodges, daughter of Mr. and Mrs. Howard C. Hodges of 3304 Whitney Drive; Shawn E. Phillips, son of Mr. and Mrs. John Phillips of 3200 Durant; Nancy E. Renick, daughter of Mr. and Mrs. Howard Renick of 3611 Imperial; Theresa A. Thompson, daughter of Mr. and Mrs. James L. Thompson of 3208 High Sky Drive; and Dana L. Tompkins, daughter of Mr. and Mrs. Tommy Tompkins of 13 Metz Court.

Those commended from Midland High School included the following students: Maureen McKelvey, daughter of Mr. and Mrs. Ken Renfrow of 2613 Terrace; James Pitts III, son of Mr. and Mrs. James Pitts II of 1318 Chestnut Lane; and Elaine Reese, daughter of Mr. and Mrs. Joseph M. Reese of 1607 N. C.

"To rank among the top 50,000 performers in a competition that includes over 1 million participants is an outstanding attainment, deserving of public recognition," stated a spokesman for the National Merit Scholarship Corporation. "We sincerely hope that the academically able young men and women who are commended in the Merit Program will diligently pursue their higher education opportunities and career goals. The nation will benefit by the full development of their talents."

The students who are being commended are beginning their final year of high school. They entered the 1983 Merit Scholarship competition by taking the qualifying test in 1981. Commended participants scored high, but slightly below students in their respective states who qualified as Merit Program Semifinalists. Only the 15,000 semifinalists, who were announced Sept. 16, will receive further consideration for about 5,000 Merit Scholarships to be awarded next spring.

Vietnam vets to meet

The Midland chapter of the Brotherhood of Vietnam Veterans will meet Monday at 7:30 p.m. at Texas American Bank-Midland, formerly Commercial Bank and Trust, according to a spokesperson for the group.

Members will be finalizing plans for the upcoming Veterans' Day program, set for Nov. 11. Also discussed will be topics for future meetings and plans for starting a membership drive.

Selection to start

GALVESTON, Texas (AP) — Jury selection will begin Monday in the retrial of a state prison inmate accused of killing a warden.

Eroy Brown's second capital murder trial is scheduled to begin after three continuances. Brown, 33, of Waco, is accused of drowning Ellis prison unit Warden Wallace Pack in a drainage ditch April 4, 1981.

State District Judge Henry Dalehite declared a mistrial March 4 when jurors voted 10-2 to acquit Brown.

Brown's attorneys contended their client acted in self-defense, believing that Pack and prison farm manager Billy Max Moore were going to torture him.

SOON, FIRST NATIONAL WILL OFFER MONEY MARKET ACCOUNTS

President Reagan recently signed into law a bill providing banks with the opportunity to offer money market accounts. This change in federal regulation gives us the opportunity to provide you with a new, secure money market investment alternative. Here are some general facts on this new deposit instrument:

Q When will First National begin offering the new investment?

A. Within the next thirty to sixty days, we will be allowed to offer you the new money market account.

Q What is the minimum deposit required to open the new account?

A. Congressional intent is to require a minimum opening balance of up to $5,000.

Q How will the rate of return on First National's money market accounts compare to other money market funds?

A. Interest rates on our money market accounts will be competitive with rates offered by other money market instruments — and will be secured to $100,000 by the Federal Deposit Insurance Corporation (FDIC).

Q How will I withdraw my money?

A. You will be able to make up to three pre-authorized or automatic transfers and three transfers to third parties per month.

Q How does Midland benefit from First National's money market accounts?

A. The funds deposited in our money market accounts are used locally and not sent to major financial centers in other areas of the country. These local deposits are available for financing the credit needs of our community and will consequently support local economic prosperity.

Q Why should I move my money market account to First National?

A. In addition to the First National personal service, our competitive rate of return, and easy access to your money, bank deposits with us are insured with the FDIC — a degree of security only available at a bank.

For further information, visit or call our New Accounts Department.

Brewers foam over in sudsy 7th to beat Cards

By JOHN NELSON

MILWAUKEE (AP) — Gorman Thomas and Robin Yount each drove in two runs in Milwaukee's six-run seventh inning, and the Brewers, their backs to the wall once again, charged to a 7-5 victory over the St. Louis Cardinals Saturday to even baseball's 79th World Series at two games apiece.

Trailing 5-1, the Brewers were headed for a third loss in four 1982 World Series games — a deficit from which only four teams have recovered — when they sent 12 men to the plate in the seventh.

"Hopefully, this will give us a lift for the rest of the Series," said Paul Molitor, who walked and eventually scored the tying run in Milwaukee's big inning. "We didn't want to be staring into a situation of having to win three in a row."

SUCH A PREDICAMENT would have been nothing new. They had to beat Baltimore on the last day of the regular season — after losing three in a row to the Orioles — to win the American League East. They did.

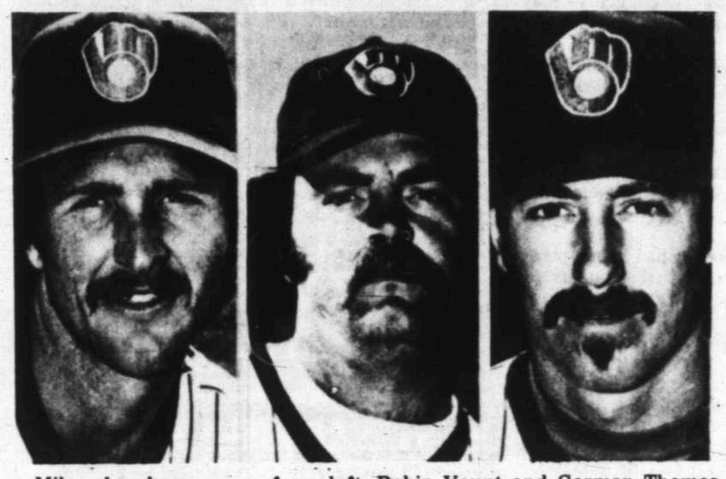
In the AL playoffs, the Brewers fell behind West champion California 0-2 and had to win three straight games for their first American League pennant. They did.

"The attitude of this team very seldom changes, no matter what the situation," said Yount, whose two-run, check-swing single drew the Brewers to within one run, 5-4.

"When you play in a World Series, every game is important," Yount continued. "This took this game the same as any, with the attitude that we want to win."

At the same time, the 56,560 fans who braved a cold, windy day at Milwaukee County Stadium were left in suspense over whether one of their favorite sons, relief ace Rollie Fingers, was able to pitch.

Left-handed reliever Bob McClure stifled a potential St. Louis rally in the eighth with a double-play pitch, then retired the side in order in the ninth, striking out Tommy Herr and pinch-hitter Gene Tenace to end the game as Fingers warmed up in the bullpen. Fingers has not pitched since Sept. 2 because of a torn muscle in his right forearm.



Milwaukee heros were, from left, Robin Yount and Gorman Thomas with two rbis, and relief pitcher Bob McClure, who slammed the door.

AFTERWARD, BREWERS Manager Harvey Kuenn, who had said earlier in the week that Fingers could pitch perhaps one inning, finally admitted that his ace was unavailable.

"He said his arm was a little stiff, so we would have had to go to Peter Ladd," Kuenn said.

The absence of another relief star, St. Louis' Bruce Sutter, also became an issue.

In Milwaukee's seventh, while Sutter sat in the bullpen, two Cardinal relievers who followed starter Dave LaPoint failed to retire a batter.

"I would only have used Sutter with two out in the eighth," St. Louis Manager Whitey Herzog said. In the previous two games of the Series, Sutter had pitched 4 2-3 innings while recording a victory and a save.

After Yount's two-run single, Cecil Cooper tied the score with a single, and Thomas' two-run hit provided the winning margin.

Yount's hit probably was the most unlikely of all, coming on a pitch he didn't intend to hit.

"I wasn't fooled by it. I was trying to hold up," Yount said. "The ball was high. I still hit it solid, but like I said, I was trying to hold up on the swing."

Asked if that was a portent of better things in Milwaukee's future, Yount said, "Things all day long hadn't gone that well, yet we were still in the ball game and that put us one (run) down. Coop came up with a big hit and then Gorman turned things around for us."

MILWAUKEE'S 10 hits Saturday gave them 42 for the Series' first four games, during which they have hit in double figures in three games. The Cardinals, meanwhile, have had just 25 hits and were hitting .197 as a team, compared with Milwaukee's .296.

Game 5 is scheduled here Sunday, with Bob Forsch going for the Cardinals against Milwaukee's Mike Caldwell in a rematch of first-game pitchers. The Brewers won the opener 10-0.

Mustangs race by UH, 20-14

IRVING, Texas (AP) - Senior All-American tailback Eric Dickerson rushed for a career-high 241 yards including a game-breaking 62-yard touchdown gallop Saturday night to carry No. 5-ranked Southern Methodist to a 20-14 Southwest Conference victory over the Houston Cougars.

The victory moved unbeaten SMU, 6-0, atop the SWC standings by a half game over idle Arkansas with a 3-0 ledger. Houston dropped to 2-3-1 overall and 1-1-1 in the SWC.

Dickerson's scoring run, in which he broke three tackles, gave SMU a 17-7 third-period lead and the Mustangs held on against a furious fourth-quarter Cougar rally.

Houston quarterback Lionel Wilson, who threw a 5-yard touchdown pass to tight end Carl Hilton in the first half, dashed 5 yards for a touchdown in the fourth period after a fumbled SMU punt to narrow the deficit to three points.

Jeff Harrell, who had a 29-yard field goal in the first half, added a 24-yard field goal for the Mustangs in the fourth quarter.

Dickerson became the second-leading rusher in SWC history behind Texs' Earl Campbell and is already SMU's all-time leading ground gainer.

SMU rolled up 332 yards on the ground against Houston as Craig James, who alternates at tailback with Dickerson, ground out 80 yards on 21 carries. Dickerson carried the ball 27 times and wa only three yards short of the school record.

SMU now has 10 consecutive victories, longest in NCAA Division 1.

Harrell's 29-yard field goal as time ran out put the Mustangs ahead 10-7 in a bruising first half that saw six SMU players assisted to the sidelines after Houston hits.

It's Midland's serve as host to USTA Masters

The year's biggest tennis event in the Tall City is upon us and it will have a new look, new setting and new, increased importance this year.

The 22nd annual Fall Tournament begins Tuesday and this year the Midland Tennis Club will be conducting the five days of jousting between the game's up-and-coming young players in association with the United States Tennis Association. That's a change. Last year it was the Penn/Circuit, but Penn has dropped its sponsorship.

Matches Tuesday through Saturday will be played at Midland College, which is a new setting, one in which the distractions will be fewer—no clanging bells for the changing of classes and less distracting traffic around the courts. Sunday's finals will be at the Racquet Club, as last year.

And this year, instead of being just another stop on this Segement of the tour, Midland will be the site of the Masters. That means players had to qualify from tournaments at Dallas, Tyler, Corpus Christi and Houston. The top eight from each tournament earned the right to play here.

The players also will be playing for more money. Last year the tournament sponsored by the First National Bank of Midland, played for $7,500. This year the prize at the end of a week's play is $10,000.

The USTA National Circuit provides up-and-coming players an opportunity to earn ranking points needed to qualify for Grand Prix Tournaments. It's still a hungry bunch, as hospitable Midlanders who put up the players during the week will attest.

Among players expected here this week are four-time All-America Marcel Freeman, Sammy Giammalva, Jr., Houston, and South African Derek Tarr. Freeman won the Dallas stop and was runnerup to Wimbledon semifinalist Tim Mayotte in the Houston Segment of the five-stop Texas Tour.

Giammalva, 19, is probably the best known player entered in the Texas Segement USTA Circuit. Ranked 187th, Giammalva reached No. 30 in the world last year after defeating Eddie Dibbs and Bruce Manson at the Grand Prix in Houston. He wound up finished second to Guillermo Vilas. As a rookie pro last year,, he won the Napa, Calif., title, reached the Cologne, W. Germany, semis and the quarterfinals at Tampa and Basel, Switzerland. On the USTA tour this year, Giammalva won at Corpus Christi and Huntington, N.Y.

Tarr, 23, turned pro last year after graduation from Auburn University. He is ranked 183. Now in his third year on the summer tour, Tarr won the 1981 Midland singles and doubles and was runner up last year at Corpus Christi. This year, he lost to Freeman, 6-4, 7-6 in the Dallas finals.

Also expected here are Mike Gandolfo, loser to Tarr in the Midland finals last year, and Juan Farrow, Midland runner up in 1980. Mark Vines, finalist here in 1978, and Joel Hoffman, who reached the finals in 1979, are expected back.

Singles play begins at 11:30 a.m. each day with doubles following. Sunday's singles will be at 1 p.m. and doubles at 3 p.m. Admission is free every day of the tournament.

A light lunch will be served at courtside for those desiring to take in some of the play during their lunch hour.

There will be a players party Monday at Kimber-Lea Club House, Midkiff and Maxwell, from 7 to 9 p.m. All Midland Tennis Association members, tournament supporters, tournament officials and people providing housing for the players are invited.

The tournament draw will be posted at the party.

Rice tailback Tim Sanders is stopped by Tech's Stan Williams as Texas Tech defeats Rice at Houston. Story, 2C.

Andujar could pitch 7th

MILWAUKEE (AP) — St. Louis Manager Whitey Herzog said Saturday that Cardinals right-hander Joaquin Andujar may be able to pitch the seventh game of the World Series if needed.

"He heals pretty fast," Herzog said about Andujar, who posted a 15-10 record and led the St. Louis' staff with a 2.47 earned run average during the regular season.

Aggies beat Baylor, 28-23

Bears all butter fingers

COLLEGE STATION, Texas (AP) — Baylor's Allen Rice lost three first-half fumbles Saturday, costing his team two apparent touchdowns and setting up a Texas A&M score as the Aggies escaped with a 28-23 Southwest Conference victory.

A&M, winning its first SWC game under new coach Jackie Sherrill, had only 141 yards in total offense at halftime, but capitalized on seven Baylor fumbles for a 21-3 lead.

A&M is 1-2 in the conference and Baylor is 1-2-1.

Aggie quarterback Gary Kubiak, one of the nation's top passers, left the game with a bruised left shoulder with :17 left in the half and did not return.

Kubiak was hurt throwing a block on A&M's third touchdown, a 25-yard run on a reverse by freshman Jeff Nelson.

Rice ran for 150 yards and Baylor got as close as 28-23, but three great defensive plays by A&M freshman safety Domingo Bryant kept the Bears out of the end zone in the closing minutes.

BAYLOR BEGAN its comeback after A&M took a 28-3 lead on sub quarterback John Elkins' two-yard run with 10:39 remaining in the third quarter.

Baylor scored on a 26-yard pass from quarterback David Mangrum to Bruce Davis, and added another touchdown on a one-yard leap by Alfred Anderson after recovering an on-side kickoff at the A&M 36.

A&M's Johnny Hector had scoring runs of five and two yards as the Aggies scored four times after recovering Baylor fumbles. A&M's scoring drives carried only 36, 20, 50 and 30 yards.

Baylor almost pulled off a victory when it drove from its 21 to the A&M 12. Bryant, who earlier had dropped Davis for an eight-yard loss on a reverse, stopped Anderson after a one-yard gaine to the A&M 11. On the next play, Bryant tackled Rice for a five-yard loss.

A 15-yard Mangrum loss and an incomplete pass stopped the Baylor drive, and a fumble by Baylor's Gerald McNeil on A&M's final punt with only 21 seconds remaining in the game clinched the Aggie victory.

IN THE first half, Mangrum threw to Rice for an apparent five-yard touchdown, but Bryant jarred the ball loose at the goalline and officials ruled a touchback with A&M getting the ball at its 20.

On Baylor's next possession, Rice, shifting from halfback to quarterback, ran left from the A&M eight and appeared to be clear for a touchdown. But he dropped the ball at the five and Wayne Asberry recovered for A&M.

Rice's third fumble, after a 15-yard gain to mid-field, was recovered by A&M linebacker Jerry Bullitt and led to Nelson's scoring run.

Tech nips Rice, 23-21

Gann FG wins it in final 3 seconds

HOUSTON (AP) — Texas Tech kicker Ricky Gann connected on a 30-yard field goal with 3 seconds to play to spoil a thrilling comeback by Rice and lead the Red Raiders to a 23-21 Southwest Conference victory Saturday night.

Hard-luck Rice quarterback Doug Johnson, starting his first game of the season, threw two touchdown passes and hit a two-point conversion with 5:35 to play to give the Owls a 21-20 lead.

But Tech quarterback Jim Hart drove the Raiders 60 yards with time running out, and Gann kicked his seventh consecutive field goal in nine attempts this season.

Trailing 20-7 early in the fourth quarter, Johnson brought the Owls back to a 20-19 deficit with touchdown passes of 2 yards to tight end Deron Miller and 13 yards to running back Tim Sanders.

Then, after Coach Ray Alborn called the entire Rice offense to the sideline on a time out, the Owls decided to go for the two points and Johnson hit tight end Stan McKinney in the corner of the end zone for the winning points.

The loss was the sixth straight this season for the Owls , who are 0-3 in SWC games. The Raiders evened their record at 3-3 for the season and 2-2 in conference games.

The Raiders took a 20-7 lead early in the fourth quarter on Anthony Hutchinson's 5-yard run and 5-yard pass to Hart on a flea-flicker pass play and field goals of 24 and 45 yards by Ricky Gann for his fifth and sixth consecutive successful field goal tres.

Time of Possession	34:25	25:35

INDIVIDUAL STATISTICS

RUSHING — Texas Tech, Lambert 9-54, Lewis 12-51, Hightower 10-50, Hutchinson 11-27, Rice, Trigg 9-66, Sanders 11-47. PASSING — Texas Tech, Hart 16-30-1-167, Hutchinson 1-1-0-5. Rice, Johnson 13-27-0-170. RECEIVING — Texas Tech, Harris 4-60, Smith 3-21, Lewis 2-23, Williamson 2-15. Rice, Miller 5-51, Sanders 3-39, Robinson 2-33.

THE OWLS, who failed on two fourth-down attempts at the Red Raider 34 and 30 yard lines, capitalized on a pair of Johnson pass completions to Kevin Trigg and Deron Miller to set up a two-yard touchdown run by Johnson with 1:15 left in the half for the Owls' first score.

Johnson, a sophomore, had started only one other game in his collegiate career and overcame a series of knee operations before getting his chance to play. Johnson completed 13 of 27 passes for 170 yards and two touchdowns.

But Hart, who hit the key passes in each of Tech's scoring drives, got the victory, hitting 16 of 30 passes for 167 yards.

Hart's biggest third-down completion of the game came with less than a minute to play when he hit Bryan Williamson with an 8-yard pass play to the Rice 14. After one play, Gann booted the game-winning field goal.

TECH'S STAN DAVIS apparently had intercepted a Johnson pass, but a penalty against the Raiders for illegal use of the hands kept Rice's final touchdown drive alive at the Tech 35. After Sanders' touchdown catch, McKinney caught the go-ahead 2-point conversion between Tech defenders Rusty Roark and Carl Carter.

Hart helped the Raider's first touchdown drive with a 33-yard pass completion to tight end Buzz Tatom, who fell backwards to the Rice five. Hutchinson followed his blockers into the end zone on the next play.

Hart hit split end Leonard Harris coming across the middle on a 32-yard pass early in the second quarter, and sophomore Robert Lewis followed with a 12-yard run to the Rice 19.

MOMENTS LATER, Hart put the flea-flicker in motion and the Raiders led 14-0.

Rice drove to the Tech 5 in the second quarter aided by passes of 16 yards to Trigg and 24 yards to Miller.

Johnson threw an incomplete pass that would have given Rice a fourth down, but an illegal use of hands penalty in the end zone against Tech's Ricky Sanders gave the Owls a first down at the 2 and Johnson scored on the first play.

Huskies raise record to 6-0

CORVALLIS, Ore. (AP) — Jacque Robinson scored a pair of second-half touchdowns Saturday night as No. 1-ranked Washington pulled away for a surprisingly difficult 34-17 Pacific 10 Conference football victory over winless Oregon State.

The game's outcome was in doubt until Robinson scored his second touchdown on a 9-yard run with 4:42 left in the contest. Washington, 6-0 overall and 4-0 in the Pac-10, was favored by 30 points against the Beavers, who haven't won a conference game since 1979.

But it wasn't that easy. Oregon State, 0-5-1 overall and 0-3-1 in the Pac-10, stayed within striking distance behind the passing of Ed Singler and running of Bryce Oglesby.

Washington didn't get any breathing room until Robinson, the Rose Bowl's most valuable player as a freshman last seawon, scored on an 8-yard run to make it 27-17 with 2½ minutes left in the third quarter.

Robinson, making his first start of the season, was ineffective against Oregon State until his late heroics.

Robinson started because Washington's leading rusher, Sterling Hinds, was out with an ankle injury.

Washington held a 20-14 halftime lead. The Huskies scored on their first possession, Dennis Brown getting the touchdown on a 5-yard run. Washington also got a 19-yard scoring pass from Steve Pelleur to Paul Skansi and two field goals from Chuck Nelson, who extended his NCAA record string of 3-pointers to 24.

Oregon State's first touchdown came on a 43-yard pass from Singler to Claude Dixon in the opening quarter. The beavers' second score, which sliced the lead to 20-14, occurred late in the first half when Tom Critser blocked a punt and Mike Sodaro recovered in the end zone.

Oregon State also got a 47-yard field goal from Chris Mangold to cut Washington's lead to 20-17 midway through the third quarter.

Furman stuns South Carolina

COLUMBIA, S.C. (AP) — Furman got two touchdown passes from quarterback David Charpia and a blocked punt for a touchdown from defensive back Ernest Gibson to stun South Carolina 28-23 in college football Saturday.

Furman, a Division I-AA team in the NCAA, built up a 21-3 lead after three quarters and held on, despite a furious three-touchdown rally in the fourth period by highly-favored I-A South Carolina.

Both teams were almost comatose for much of the first half, but South Carolina defensive end Phil Ellis fell on a Charpia fumble at the Furman 11 late in the first quarter.

South Carolina, now 3-3, was unable to move the ball and had to settle for a 21-yard Mark Fleetwood field goal.

Furman, now 4-2, struck for two touchdowns in the second quarter. Charpia drove his team 51 yards in 14 plays and hit tight end Steve Coppenger with a 3-yard touchdown pass late in the quarter.

On the next series, South Carolina was unable to move the ball and Chris Norman had to punt. But Gibson, who had already recovered a key fumble to end a Gamecock drive, broke through and blocked the punt at the Gamecock 10.

The ball bounced into the end zone, where Gibson fell on it, giving underdog Furman 14-3 halftime lead.

Tulsa 22, S. Illinois 3

TULSA, Okla. (AP) — Running backs Ken Lacy and Michael Gunter scored touchdowns and Stu Crum added three field goals as Tulsa cruised to a 22-3 Missouri Valley Conference victory over Southern Illinois Saturday night.

McClure Brewers' answer to Bruce

MILWAUKEE (AP) — Milwaukee relief pitcher Bob McClure threw the ball Saturday like the bullpen is his destiny.

But McClure, who killed a threat by the St. Louis Cardinals in the eighth inning and blanked them in the ninth, wants nothing to do with the role.

"That's a touchy question," McClure said after the Brewers had beaten the Cardinals 7-5 to tie the World Series at two games each.

McClure, a left-hander, entered the game with two runners on base and one out in the eighth and got Willie McGee to hit into an inning-ending double play. And in the ninth he got the Cardinals out in order, striking out two of the three batters he faced, and was credited with the save.

In Game 1 of the series, he pitched 1 1-3 innings, giving up one run on two hits.

Despite his work as a reliever, McClure says next year he wants to be a starter.

"I have relieved, but I feel I might be able to do a better job as a starter," he said.

How far will he take it with the Brewers?

"All the way," he said. "I want to start, and if they don't want me to start I'll have to think of something else."

McClure was pleased about his role in the Brewers' victory in more ways than one.

It was Cardinals Manager Whitey Herzog who had traded him from Kansas City to Milwaukee in 1976.

McClure moved into the starting rotation with the Brewers April 17 this year and won five straight games. He finished the first half of the season with a 7-3 record.

So, he's had a taste of both starting and relieving.

But at Milwaukee, any reliever takes a back seat to Rollie Fingers, the 1981 American League Cy Young Award and Most Valuable Player.

When McClure entered the game Saturday, Fingers, who suffered an arm injury near the end of the regular season, was warming up.

But Milwaukee Manager Harvey Kuenn said he would not have used Fingers.

"Fingers said his arm is still stiff," Kuenn said.

Cards not discouraged

MILWAUKEE (AP) — From the St. Louis Cardinals' point of view, only a bad hop and a check swing kept them from taking a three games-to-one lead in the 79th World Series Saturday.

"But the breaks just didn't go our way," said left fielder Lonnie Smith after the Milwaukee Brewers rallied for a 7-5 victory in Game 4. "We had one bad inning, and it cost us. I thought we were going to win."

First baseman Keith Hernandez and losing relief pitcher Doug Bair said the most damaging plays to the Cardinals were Ben Oglivie's one-out grounder and Robin Yount's two-run single in Milwaukee's six-run seventh inning.

Oglivie reached first base when rookie St. Louis hurler Dave LaPoint failed to handle Hernandez's throw as he ran to cover the bag. The extra out made all the difference as all six Milwaukee runs were unearned.

"Even if it had been a bad hop, I could have made the play myself," said Hernandez in describing the misplay that awakened the Brewers.

Fin & Feather

MONTGOMERY, Ala. — Watching someone else catch bass sounds about as exciting as watching grass grow, but bass fishing is growing as a spectator sport.

Over 4,500 fishing fans viewed the daily weigh-ins during the 12th annual Bass Masters Classic world finals here this week. The ceremonies took place at the Montgomery Civic Center, complete with electronic scoring over a big screen video to bring the weigh-in action up close.

What is the attraction? Forty-one of the best bass anglers in the world fished for $100,000 during the "Test of the Best," with $40,000 the winner's share.

"Bass fishing has a special appeal," says Ray Scott, the founder of the bass Anglers Sportsman Society, which puts on this tournament series. "The black bass is found in every state but Alaska and now in many countries and rates as the top of the list in angling achievement."

In 1971, Scott's tournaments were organized into a series of qualifying events with the season's top anglers reaching the Classic, the proclaimed world finals.

The Classic is the Super Bowl of bass fishing. To win it means instant fame. Classic champs have parlayed the title into small mints, some estimating that the title means more than $100,000 to the winner.

The selection of the Classic site has become a fishing event too. State, city, chamber of commerce and tourist agencies are angling for the host site to reap the annual revenues and publicity values surrounding the tournament.

Montgomery and Alabama anted up $100,000 to land the event for the second year. Cincinnati and Ohio have reportedly guaranteed $200,000 for next year with the traditional fall contest being moved to Aug. 4-6, 1983.

SOME CRITICS have chided Scott about the Classic losing its charm. They favored the former "mystery trip" concept to a remote bass-laden lake where the winner's skill would be measured in heavy poundage.

"We don't have to have a fish kill to prove these pros' skills," remarks Scott. "Actually, the tougher the fishing conditions, the quicker the cream of the crop comes to the top. That's what makes these Classic pros the best. They had to prove they could do it to get there."

And the proof in the creel is the crowd appeal. "Folks want to learn how to catch bass," explains Scott. "The pros are the teachers. At the end of the Classic, there's no secrets. Everyone finds out what the winner did to earn his $40,000."

The complete Classic show took place in-and-around downtown Montgomery Civic Center. While the pros were chunkin' and awindin' on the 75-mile length of the Alabama River, the fishing fans can make a trip to "The Bass Angler's Fantasy Island."

There was a three-day fishing tackle show and boat show with over 20,000 square feet of newest in bass fishing related gear on display.

For the serious-minded, the "Bass Fishing Institute" is worth the trip. Here the bassin' know-how pours from a panel of well-known bass fishing pros and teachers.

Shooting stops, battle rages on

By FRANCIS X. QUINN

PORTLAND, Maine (AP) — The shooting has stopped for this year, but the battle over moose hunting in Maine is going strong.

Anti-hunting defenders of the state's herd, which is estimated at between 15,000 to 20,000 moose in northern Maine alone, say they've collected more than 40,000 petition signatures, enough to force a statewide referendum to outlaw moose hunting.

In response, the 7,000-member Sportsmen's Alliance of Maine has announced plans to mobilize pro-hunting forces against any referendum.

The battle comes against the backdrop of the just concluded six-day 1982 season, in which 88 percent of 1,000 licensees bagged a moose. The limit was one moose per hunter.

State biologists who examined the kill found "the condition of animals that came in was by and large pretty good," according to Tom Shoener of the Department of Inland Fisheries and Wildlife.

In the 1980 state-residents-only hunt, 91 percent of the 700 permit-holders found their mark.

General hunting of moose was stopped in 1935 because the Maine herd was dwindling. But in recent years, the herd has grown, and for the past decade the Legislature has been asked to legalize a general moose hunt. The 1980 residents-only hunt was an experiment, setting the stage for this year's open hunt.

Opponents want to ban future hunts. They argue that the moose has become so tame and used to human contact that much of the sport has been taken away and shooting moose has become almost a harvest.

The biggest moose this year was bagged by 17-year-old Sterling Waterman, a high school senior from Gray. Hunting in Aroostook County southeast of Masardis with his father on the first day of the season, Waterman dropped a bull that was registered by wardens at 1,330 pounds, field-dressed.

That prize-winner was so big that when the Watermans hauled it by logging skidder back to their truck, they couldn't get it aboard until they quartered it.

Seventeen other bulls weighed more than 1,000 pounds.

For the permit-holders who beat 60-1 odds in a drawing to win a chance to join the hunt, tracking and dropping the moose were not the only challenges. Bringing down a lumbering beast in a spot from which it could be readily removed required a deft touch.

Shoener said state officials remain skeptical of some hunters' claims that moose grew more wary and elusive during the course of the six-day season.

Acknowledging the obvious in a state where a conservatively estimated 400 moose are taken by poachers each year, Shoener said, "We've had a moose-hunting season continuously since 1935, but it hasn't been a legal one, if you know what I mean.

"They've been shot at and shot around by deer hunters, and bear hunters and bird hunters forever. I don't think anything changes within a few hours."

How Top 10 Fared

Here is how the Top 10 teams in the Associated Press High School football poll fared Friday:

Class 5A
1. Bryan (6-1-0) lost to Euless Trinity, 14-13
2. Port Arthur Jefferson (6-0-0) defeated Beaumont French, 20-12
3. Odessa Permian (7-0-0) defeated Midland Lee, 27-0
4. Austin Reagan (6-0-0) played Austin Crockett Saturday
5. San Antonio Churchill (6-1-0) lost to SA Judson, 14-0
6. Temple (6-0-0) defeated Round Rock Westwood, 28-0
7. Highland Park (6-1-0) lost to North Mesquite, 20-13
8. Gregory-Portland (5-0-0) played CC Carroll Saturday
9. Fort Worth Eastern Hills (6-1-0) defeated FW Trimble Tech, 46-0
10. Euless Trinity (7-0-0) defeated Bryan, 14-13

Class 4A
1. Fort Bend Willowridge (6-0-0) defeated A&M Consolidated, 13-3
2. Brownwood (5-1-0) played Cleburne Saturday
3. Gainesville (5-0-0) played Wichita Falls Hirschi Saturday
4. Waxahachie (6-1-0) lost to Rockwall, 21-7
5. Jasper (7-0-0) defeated Port Arthur Lincoln, 3-0
6. Carrizo Springs (6-0-0) defeated Laredo United, 19-0
7. Bay City (4-2-0) lost to Friendswood, 19-13
8. Sweetwater (6-1-0) lost to Andrews, 24-14
9. Cleburne (5-1-0) played Brownwood Saturday
10. San Angelo Lakeview (7-0-0) defeated Fort Stockton, 13-3

Class 3A
1. Post (7-0-0) defeated Slaton, 42-0
2. Port Isabel (7-0-0) defeated Sharyland, 56-20
3. McGregor (7-0-0) defeated China Spring, 35-6
4. Crockett (6-1-0) lost to Rusk, 33-8
5. Cameron (7-0-0) defeated Rockdale, 42-20
6. Refugio (6-1-0) defeated Goliad, 55-6
7. Bonham (6-0-1) defeated Whitesboro, 42-0
8. Daingerfield (6-0-1) defeated Queen City, 52-0
9. Sweeney (7-0-0) defeated Palacios, 47-6
10. Newton (6-1-0) lost to Center, 41-19

Class 2A
1. Eastland (7-0-0) defeated Albany, 41-8
2. East Bernard (7-0-0) defeated Louise, 27-0
3. Pilot Point (7-0-0) defeated Southlake Carroll, 35-7
4. Tidehaven (7-0-0) defeated Bloomington, 64-0
5. Hale Center (6-0-1) defeated Ralls, 32-14
6. Pottsboro (7-0-0) defeated Howe, 45-14
7. New Deal (6-0-1) defeated Seagraves, 17-0
8. Deweyville (6-0-0) defeated West Hardin, 14-6
9. Seagraves (6-1-0) lost to New Deal, 17-0
10. Holliday (6-1-0) defeated Petrolia, 67-0

Class A
1. Bremond (7-0-0) defeated Chilton, 20-0
2. Meridian (7-0-0) defeated Rio Vista, 41-0
3. Rocksprings (6-0-0) defeated Medina, 20-0
4. Union Hill (7-0-0) defeated Mount Enterprise, 28-0
5. Eden (6-0-1) defeated Sterling City, 21-0
6. Lindsay (6-1-0) defeated Era, 78-0
7. Agua Dulce (6-1-0) defeated Bruni, 28-0
8. Vega (6-1-0) defeated Lazbuddie, 47-7
9. Goldthwaite (6-1-0) defeated Blanket, 18-0
10. Wink (6-0-0) defeated Buena Vista, 59-8

Sunland

Chrys Beal refines art of Dressage

Staff Photo by Bill Hunter

Chrys Beal is pictured here with her championship horse Dancer, which she has been riding for four years.

By CHAD PUERLING
Sports Writer

The dictionary defines dressage as "exhibition horsemanship in which the horse is controlled through certain difficult steps and gaits by very slight movements of the rider."

But Midlander Chrys Beal has a more refined definition of the esoteric sport.

"Dressage," she said, "is the art form of horse back riding."

The 28-year-old geophysicist has been involved in the sport for five years and recently won the Level II Central States Regional Dressage Final competition in Denver.

Beal qualified for the regional competition when she won the Fifth Annual Charity Dressage Show in Midland aboard Dancer, her 8-year-old bay mare.

To get to the point of winning a divisional championship Beal rides two hours a day, every day. It is a labor of love for the mother of one, "Everyone should try it," she said, "They would love it."

Beal and her husband Kelley moved to Midland five years ago from Golden, Colorado where they attended the Colorado School of Mines.

"When I first moved here I didn't have much to do," she said, "So I started horseback riding lessons."

"My teacher, Mimi Bammersbach, introduced me to the dicipline of dressage."

Soon afterwards Beal bought Dancer and began competitive riding a year later.

The combination worked so well that Dancer moved to Level II within the first year where the competition was considerably tougher, as witnessed by the three years it has taken to reach Level III. But it is still a long road to the top echelons of dressage.

"It can take seven to eight years to reach the international level," Beal said. A prospect that doesn't bother her in the least.

"It's the only sport I know of where a 56-year-old grandmother can compete in the Olympics," she said. "So I plan to keep on going."

When a horse wins a regional competition, it is automatically moved up a level. With her newly acquired title, Dancer becomes a Level III horse.

There are four national levels of competition, all of which rate below the four international divisions.

"You must reach the fourth level in the United States before you can begin international competition," Beal said. "Then you start all over."

The international levels are Prix Saint George, Intermediate I, Intermediate II and Grand Prix. The final of which is the Olympic level.

Nationally, there are four regional contest and the same judges are used at each. They in turn pick the top eight horses from each level to go to nationals regardless of how many may be chosen from any single region.

Despite winning the regional competition Beal was dissapointed in not being invited to the national finals.

"I was hoping to leave last week," she said, "but I found out I didn't get selected."

The competitions consist of putting the horse through a set series or combination of moves. There are two standarized tests for each level which are set at the beginning of each year so riders and horses can practice the routines.

"Basically you want to get your horse to go foward, sideways and stop," Beal said. "With those instructions you can do any series or combination."

To get a horse through the series of moves a rider uses a universal system of aids which are an almost imperceptible movement of leg and rein commands.

Beal's newest horse is a Dutch warmblood appropriately named Dutch Sun. She has been riding Dutch for one year and is still patiently working the horse on Level I.

If the success formula works as well this coming year great things can be expected of Beal and both her horses. Last year Beal-rode Dancer in only two competitions and won them both.

Montana wins over Vandals

MISSOULA, Mont. (AP) — Tailback Greg Iseman scored two touchdowns — on a 13-yard counter play and a 52-yard pass reception — as Montana overpowered Idaho 40-16 in a Big Sky Conference football game Saturday.

Iseman, the conference's leading rusher, gained 160 yards on the ground, raising his season total to 602 yards in six games. He added 61 yards on three pass receptions.

Montana moved into second place in the conference at 3-1, one game behind Montana State.

The Grizzlies ran their season record to 4-2 in the 64th meeting between the two regional rivals.

Lee half game back in 9th Grade chase

The battle for first place in the Ninth Grade Midland-Odessa football league remained a three-team race this week with Nimitz and Ector holding identical 5-0-1 records while Lee Maroon is one-half game back at 5-1-0.

Nimitz and Bowie each came up with victories Saturday to maintain their grip on first with Nimitz beating 1-5-0 Crockett by a narrow 7-0 margin and Ector ripped winless Hood, 28-0.

Lee Maroon, still within reach of first place, posted a 26-20 victory over Midland Gold Thursday while Midland Pruple defeated Lee White 29-14. Midland Purple is also still alive in the league race with a 4-2 record.

In Eighth Grade Midland-Odessa Conference play, Goddard moved into sole possession of first place at 5-0 with a 25-0 victory over 3-3 Ector. Nimitz, 4-1, dropped from the top by suffering its first loss of the season to 3-3 Alamo, 12-0 and is tied with San Jacinto, a 38-0 winner over Hood, for second. Crockett, 3-3, was a 26-14 winner over Bonham, 1-4 while Bowie had an open date.

Trinity kept its unbeaten record intact Saturday with a 50-24 victory over winless Midland Christian while Goddard White blanked San Jacinto 6-0 and Goddard Red shutout Alamo 12-0.

In seventh grade American Conference play, shutouts dominated as Goddard Red blitzed Alamo Scarlet, 20-0; Goddard White blanked San Jacinto White, 12-0 and Alamo Grey defeated San Jacinto Green, 16-0.

On Tuesday, Goddard Red posted an easy win over Alamo Scarlet, 52-0 while San Jacinto Green defeated Alamo Grey 12-0. San Jacinto White posted a 22-8 victory over Goddard White.

Florida's Johnny Williams scores on a leap over West Texas State line as Gators gobbled up Buffaloes, 77-14.

Tennessee upsets Crimson Tide, 35-28

KNOXVILLE, Tenn. (AP) — Alan Cockrell fired two touchdown passes, Fuad Reveiz kicked four field goals and Chuck Coleman iced it with a 34-yard touchdown run in the final quarter as Tennessee upset second-ranked Alabama 35-28 in a Southeastern Conference football game Saturday.

The victory ended 11 years of frustration for the Vols, who had not won this annual skirmish since a 24-0 triumph in 1970.

Alabama, which earlier closed a 14-point deficit to seven, threatened in the final 90 seconds, moving to the Tennessee 17 where Mike Terry intercepted a passed, tipped by Lee Jenkins, in the end zone to seal the victory with 17 seconds remaining.

The Vols, trailing 21-13 at halftime, took the lead with an 11-point outburst within a span of 1:32 early in the third quarter.

Coleman had a 21-yard run and Cockrell completed a 13-yard pass in the opening drive of the second half which ended on Reveiz' 45-yard field goal two plays after Cockrell's apparent 24-yard touchdown pass to Darryal Wilson was nullified by an illegal use of hands infraction.

Two plays later, Ken Coley was stripped of the ball as he rounded the right corner and Tennessee's Jenkins covered at the Alabama 38. Two plays later, Cockrell fired a 39-yard touchdown pass to Mike Miller, who made the reception on the Alabama 13. Cockrell then connected with Kenny Jones on a two-point conversion and the Vols led 24-21.

It was the first setback in six games for Alabama as the Crimson Tide's SEC record fell to 2-1. Tennessee went to 3-2-1 overall and 1-1-1 in the conference.

Reveiz came back with a 40-yard field goal with 2:35 left in the third quarter and Coleman applied the clincher on his 34-yard run with 7:21 remaining, getting a springing block from split end Willie Gault.

Tennessee's other scoring came on Reveiz field goals of 22 and 32 yards and a 52-yard pass from Cockrell to Gault, the world class track star who easily got behind the Alabama secondary.

Alabama took a 21-13 halftime lead on a four-yard run by Joe Carter and two touchdown passes by Walter Lewis, a 35-yarder to Jesse Bendross and a 38-yarder to Joey Jones.

After the Vols had built a 35-21 advantage, Alabama quickly drove 79 yards to score on Linnie Patrick's 14-yard sweep with 5:04 remaining.

Austin sparks Clemson over Duke Blue Devils, 49-14

CLEMSON, S.C. (AP) — Tailback Cliff Austin tore up the turf as 20th-ranked Clemson romped to a 49-14 football win over Atlantic Coast Conference rival Duke here Saturday and ran its record to 3-1-1.

The senior from Scottdale, Ga., scored three touchdowns and carried 27 times for 260 yards, breaking Clemson's single-game rushing record of 234 yards, set in 1952 by Don King.

Both teams racked up a healthy share of penalties, which cost Clemson 152 yards and Duke 132 yards.

Duke scored first when Ben Bennett hit wide receiver Chris Castor with a 42-yard touchdown pass with less than five minutes gone in the game.

But Clemson tied the score five minutes later as Austin caplped as Austin finished a 10-play, 80-yard drive by rushing in for the score from the 1-yard line.

The Tigers ended an 80-yard drive that began in the first period with Austin running 47 yards for a touchdown just 8 seconds into the second quarter. Bob Paulling's kick gave the Tigers a 14-7 lead they never lost.

N. Carolina 41, N.C. State 9

CHAPEL HILL, N.C. (AP) — Scott Stankavage passed for 203 yards and a record-tying four touchdowns Saturday as No. 11 North Carolina romped to a 41-9 victory over North Carolina State in Atlantic Coast Conference football.

THE ACC

Stankavage, a replacement for injured senior Rod Elkins, completed 11 of 18 passes and tied a school record for touchdown passes set by Chris Kupec against Army in 1974.

He opened with a first-quarter 56-yard scoring pass to tailback Kelvin Bryant, who rushed 20 times for 107 yards in his first start since the opening game against Pittsburgh. Stankavage added a 30-yard strike to Victor Harrison late in the second quarter to give the Tar Heels a commanding 17-0 lead. Following the second of two Brooks Barwick field goals, Stankavage hit Mark Smith with a 20-yard scoring pass with 6:36 remaining in the third quarter to make it 27-2.

N.C. State's offense never crossed midfield as managed only two first downs in the second half.

Maryland 52, Wake Forest 24

COLLEGE PARK, Md. (AP) — John Nash ran for three touchdowns, one from 67 yards, and Boomer Esiason passed for three more as Maryland walloped pass-happy Wake Forest 52-24 in an Atlantic Coast Conference game Saturday.

It was the fourth straight victory for the Terps, 4-3, and left them in a first-place tie with Clemson and North Carolina for the ACC lead at 2-0.

Wake Forest, 3-4 including 0-3 in the ACC, pulled to within 31-24 midway through the third period after Michael Ramseur, who rushed for 104 yards, scored two of his four rushing touchdowns with a 44-second span.

But Maryland scored on its next three possessions on runs of two yards by Rick Badanjek and five by Nash, and a 24-yard pass from Esiason to Mike Lewis, to build a commanding 52-31 lead.

Esiason also completed two TD passes to Greg Hill for 22 yards second quarter, and another for 28 yards to start the third quarter, making it 31-10.

Gary Schofield of Wake Forest completed 40 of 65 passes for 363 yards while Esiason was 12-for-29 and 192 yards.

Maryland, which has whipped Wake in 10 of their last 11 meetings, outgained the Demon Deacons 345-83 on the ground.

Georgia bulldogs balky Vanderbilt

ATHENS, Ga. (AP) — Terry Hoage, the nation's interception leader, stole three passes Saturday, including one in the final quarter to set up a 7-yard go-ahead touchdown by Barry Young, to boost the undefeated and fourth-ranked Bulldogs to a 27-13 Southeastern Conference football victory over surprising Vanderbilt.

THE SOUTHEAST

Young's TD plunge gave struggling Georgia a 20-13 lead 4:44 into the fourth quarter. Herschel Walker closed out the scoring with a 26-yard burst in the closing minutes, giving the two-time All-American tailback 42 career touchdowns, equaling the SEC mark set by Charles Alexander of Louisiana State.

The Bulldogs, 6-0, and 3-0 in the league, led 10-6 at intermission in a game highlighted by outstanding defensive play and 11 turnovers, seven by Georgia.

Vanderbilt, 3-3, and 1-2 in the SEC, took a 6-0 lead after only 3:58 of play when Georgia quarterback John Lastinger, who had six turnovers on the day, fumbled on the Bulldogs' first two series deep in his own territory.

Vandy, however, stymied by a tough Georgia defense that sacked Commodore quarterback Whit Taylor nine times for 72 yards in losses, couldn't move the ball and settled for field goals of 29 and 28 yards by Ricky Anderson.

Lastinger wound up with only five completions in 10 attempts for 27 yards and three interceptions. Taylor was 27 of 58 pass attempts for 257 yards, three interceptions and a fumble.

Miami 31, Mississippi St. 14

MIAMI (AP) — Junior fullback Speedy Neal scored three second-half touchdowns as 17th-ranked Miami erased an 11-point deficit and rode to a 31-14 college football victory over Mississippi State Saturday.

Neal scored on runs of 5 and 1 yards in the third period as the Hurricanes wiped out a 14-3 Bulldogs lead. Then he added a 4-yard burst six minutes into the final quarter as the Hurricanes took a commanding 24-14 lead.

The victory boosted Miami's record 5-2. Mississippi State, losing for the fourth straight time, dropped to 3-4. with Southeastern Conference dates with Auburn and Alabama coming up the next two weeks.

Miami took a 3-0 lead on Jeff Davis' 47-yard field goal midway through the first quarter, but fell behind 7-3 by halftime as State quarterback John Bond engineered an eight-play, 42-yard

Florida 77, W. Texas St. 14

GAINESVILLE, Fla. (AP) — Quarterback Wayne Peace passed for 289 yards and three touchdowns Saturday as Florida demolished West Texas State 77-14.

Lorenzo Hampton accounted for three more touchdowns, including an 86-yard run, and John L. Williams broke loose for two. Williams, a freshman, carried 19 times for a total of 188 yards and scampered 76 yards for his second score.

Auburn 24, Ga. Tech 0

AUBURN, Ala. (AP) — Auburn Tiger quarterback Randy Campbell hit Clayton Beauford on a 60-yard scoring bomb that broke open a tight game Saturday as a swarming Tiger defense and a running attack led by Lionel James gave Auburn a 24-0 victory over Georgia Tech.

The Tiger defense was so dominant that, near the end of the third quarter, Georgia Tech's Yellowjackets had mustered only three first downs and a total offense of 54 yards.

Auburn's David King picked off his fifth interception of the year in the final quarter as Auburn kept Tech off the board and raised the Tiger record to 5-1. Tech fell to 3-3.

James, leading the Tiger wishbone running game while freshman sensation Bo Jackson was sidelined by an injury, returned a punt 62 yards to set up a 28-yard field goal by Al Del Greco that made it 10-0 at the half.

Pedroza retains ring title

CHARLOTTE, N.C. (AP) — Panama's Eusebio Pedroza retained his World Boxing Association featherweight title Saturday after fighting to a 15-round controversial draw with hometown favorite Bernard Taylor.

Referee Stanley Christodoulou scored the fight 147-143 in favor of Pedroza, while judge Knude Jensen had Taylor on top 146-144 and Oscar Oppen saw it 146-146.

It was the 29-year-old champion's 15th consecutive successful title defense and second this year, making his record to 34-3-1.

Pedroza, weighing in at 126, did most of his damage on the inside although the only time he appeared to hurt Taylor was in the 13th round when he opened up a cut over Taylor's right eye with an accidental butt.

ESPN wants something for everyone

By MIKE EMBRY

NEW YORK (AP) — The Entertainment and Sports Programming Network wants to be everything to everybody when it comes to sports television.

That means college basketball as well as Australian football ... football and karate ... baseball and polo ... Something for everyone, 24 hours a day via cable systems.

"It's our objective, to the best of our financial ability, to upgrade the programming," said Bill Grimes, ESPN president, in a interview at the company's corporate headquarters here. "What does that mean? That means obtaining the rights to the more exciting nationally oriented sporting events.

"That's an objective of ours, but we must be careful that we get a mix of mass-appeal events because they're very expensive to obtain and have a healthy mix of those kinds of events with the more narrow-appeal events that don't cost as much money.

"We cannot compete with the networks because they're in 80 million homes and we're in 20 (million). We're trying to get the best we can without spending ourselves out of business."

He said the limited-interest sports also give advertisers a specialized audience to direct their products.

"WE CAN GO to an advertiser and sell the uniqueness of the composition of the audience that is attracted to polo or tennis or things like that," he said.

Grimes, after 10 months as chief of operations, became the network's president last June when Chet Simmons left to become commissioner of the new United States Football League.

ESPN, which celebrated its third anniversary Sept. 7, has grown from 1.4 million subscriber homes to over 18 million. And since starting 24-hour programming in September 1980, the network has attracted over 550,000 households a month.

Grimes, 41, said the network, a subsidiary of Getty Oil Co., should start realizing profits in two years.

"Our advertising revenues have risen significantly, although they still aren't what we want them to be," he said. "Our business plan indicates our objective is to hit breakeven in 1984. So we're losing money this year and we plan to reduce signficantly that loss next year to the black sometime in 1984."

The network has gone from 12 national advertisers in 1979 to 210 this month. It has enhanced its advertising with a new consumer campaign theme "ESPN — Where The Cheering Never Stops."

SOME OF its new programming for 1982 and 1983 is coverage of the USFL, National Basketball Association and selected Atlantic Coast and Big Ten conferences and UCLA and Notre Dame in college basketball.

"All that's new this year, so we've taken in 1982, in terms of investment, a big, big step forward," said Grimes.

Money, or the lack thereof, has been one reason ESPN has not done much indepth reporting.

"I would like very much to see us become more of a factor in sports journalism, but we have to remember that a business must become a business before some of those qualitative-type objectives can be achieved," said Grimes, whose background includes CBS radio, where he was responsible for its seven company-owned stations, six being all-news.

ESPN stands a chance to benefit from a prolonged National Football League players' strike because it holds rights to Canadian Football League telecasts. It recently sold some CFL game rights to NBC but will still carry games that don't conflict with the national network.

"The financial impact on us, hopefully, will be a positive one," Grimes said.

SC uncovers another tailback

Senior Gibson sets pace against Cards

STANFORD, Calif. (AP) — Senior tailback Anthony Gibson scored the first three touchdowns of his career to lead a powerful Southern California running attack as the 14th-ranked Trojans routed Stanford 41-21 Saturday before a crowd of 75,185.

Gibson took over for injured starter Todd Spencer and racked up 120 of the Trojans' 227 yards on the ground. Spencer rushed for 99 yards before he sprained his left knee late in the second period of the nationally televised

FAR WEST

game.

Steve Jordan set a school record for the Trojans, now 4-1, when he connected on a 52-yard field goal midway through the third period to give Southern Cal a 24-14 lead. He added a 35-yard field goal midway through the final period.

Stanford quarterback John Elway had his toughest day of the season, suffering three interceptions and four sacks. Stanford's record fell to 3-3.

Southern Cal quarterback Sean Salisbury completed 17 of 30 passes for 201 yards. He scored two touchdowns on quarterback sneaks.

The Trojans, scoreless in the first period, stormed Stanford's defense for three touchdowns in the last seven minutes of the second quarter to take a 21-14 lead at halftime.

Stanford took the lead 14-7 when Ken Williams bobbled a kickoff on the goal line, picked up the ball in traffic and broke through a hole to sprint 69 yards to the Southern Cal 31 yard line. Four plays later, at 5:22 of the second period, Elway lobbed a soft pass from the one to Vincent White in the endzone.

The Trojans tied the game again on a 65-yard, 12-play drive capped by Gibson's leap into the endzone from the two at 1:27.

Southern Cal then took possession on Stanford's 41 after a poor punt. Salisbury fired a 32-yard pass to Ware and an 8-yard pass to Gibson inches from the goal line. Gibson ran it over with 10 seconds left in the half.

UCLA 42, Washington State 17

PASADENA, Calif. (AP) — Jojo Townsell dashed 53 yards on a flanker reverse midway through the third period to put sluggish UCLA ahead to stay Saturday and the 12th-ranked Bruins went from there to a decisive 42-17 victory over Washington State in a Pacific-10 Conference football game at the Rose Bowl.

The visiting Cougars, listed as 23-point underdogs, took a 17-14 advantage by scoring 10 points early in the third quarter before Townsell's touchdown run with 6:55 to go in the period ignited a four-touchdown UCLA outburst in a span of 8:39.

The Bruins also scored in the third quarter on a 27-yard pass from quarterback Tom Ramsey to wide receiver Cormac Carney and a 65-yard interception return by linebacker Blanchard Montgomery. They got on the scoreboard again after only 1:44 of the final period on a 20-yard pass from Ramsey to wide receiver Dokie Williams.

California 10, Oregon 7

BERKELEY, Calif. (AP) — Gale Gilbert threw a 26-yard touchdown pass to tight end David Lewis with 53 seconds remaining to give the California Bears, virtually helpless on offense for 58 minutes, a 10-7 Pacific-10 football victory over Oregon Saturdey.

Freshman quarterback Dana Hill had given Oregon the lead by dashing 13 yards for a touchdown with 2:06 left. The Ducks drove 80 yards to score after Cal's Joe Cooper kicked a 36-yard field goal early in the fourth quarter.

The victory was California's first in the conference under Coach Joe Kapp. The Bears stand 1-2 in the Pac-10 and 4-2 for all games, while Oregon is 0-6 overall with an 0-4 conference record.

Risher leads LSU over Kentucky

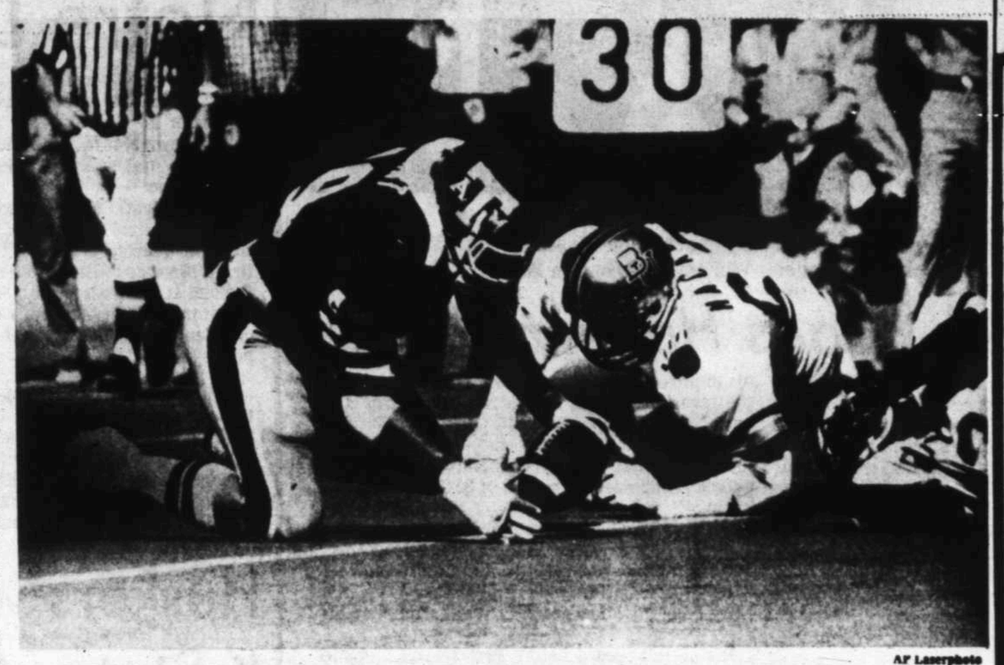
LEXINGTON, Ky. (AP) — Alan Risher passed for two touchdowns and directed another scoring drive Saturday night as 16th-ranked Louisiana State drubbed Kentucky 34-10 in a Southeastern Conference football game.

A pair of quick Kentucky turnovers gave the Tigers a 10-0 lead less than four minutes into the game.

Risher's 9-yard touchdown pass to Eric Martin following a fumble recovery at the Kentucky 25 put LSU ahead 7-0 with 12:30 remaining in the opening quarter.

KENTUCKY'S GEORGE Adams fumbled the ensuing kickoff and Juan Betanzos kicked a 37-yard field goal four plays later to make it 10-0 after only 3:54 of play.

The Tigers, 4-0-1 overall and 2-0-1 in the SEC, jumped ahead 17-0 after another Kentucky fumble on the first series of the second half. Risher moved the Tigers 17 yards for that score, passing six yards to Herman Fontenot in the end zone.



AP Laserphoto

Texas A&M's Jon Van Sant (49) pounces on fumble by Baylor's Gerald McNeil (3) in SWC action at College Station Saturday.

Sul Ross knocks off Tarleton

STEPHENVILLE, Texas (AP) — Fullback Andrew Hill ran for two touchdowns and caught two scoring passes from quarterback Larry Hill to pace Sul Ross State to a 35-9 Texas Intercollegiate Athletic Association win Saturday over Tarleton State.

Andrew Hill scored on runs of 22 and five yards and caught touchdown passes of 18 and three yards. Sul Ross' other touchdown came on a 16-yard interception return by Terry LeBlanc.

Sul Ross is now 5-0 for the season and Tarleton State is 2-3.

Tarleton scored a safety when Sul Ross punter Tim Mund ran out of the end zone with a high snap from center and a touchdown on an eight-yard pass from Steve Bean to Wade Wilson.

Greenwood wins, 21-7

MERTZON—Quarterback Stuart Burleson passed 42 yards to John Ellis and 28 yards to Marc Colburn for touchdowns, and rushed two yards for another score to lead Greenwood's Rangers to a 21-7 District 7-A win over Irion County Friday night.

Greenwood improved its record to 3-4, 3-1 in district, while the Hornets are 1-6 and 0-4.

Greenwood	Statistics	Irion
10	First Downs	14
41-101	Yards Rushing	54-188
178	Yards Passing	29
16-10-0	Passes-Comp-Int	13-4-1

Score by periods:

Greenwood	0	13	0	8—21
Irion County	0	0	0	7—7

G—John Ellis, 42-pass from Stuart Burleson (Burleson kick).
G—Burleson, 2-run (kick failed).
IC—Ruben Flores, 1 run (Byron Larson kick).
G—Marc Colburn, 28 pass from Burleson (Bill Franks run).

BC nips Rutgers on pass with two seconds left

NEWTON, Mass. (AP) — Sophomore Doug Flutie hit Troy Stradford on a third-down, 2-yard scoring pass with 12 seconds left and followed with a two-point conversion toss to Scott Nizolek Saturday night, lifting Boston College to a 14-13 football victory over stubborn Rutgers.

Flutie, frustrated throughout most of the game as he connected on only 15 of 40 passes and had four intercepted, drove the Eagles to victory with an 87-yard drive after B.C. forced a punt with 1:18 remaining.

Flutie hit on four passes and ran three times in leading the charge down the field. He had one pass nullified by a penalty, but he came right back with a long strike for a first down.

On first down at the Rutgers 47, Flutie picked up 12 yards on a keeper and drew a personal foul penalty as he was hit out of bounds. That gave B.C. a first down at the 20.

Flutie immediately ran on the quarterback draw for a first down at the five and, three plays later, flipped a desperation pass to Stradford, who made a diving catch in the corner just across the goal line. Flutie then hit Nizolek on a similar pass play for the game-winning conversion.

Rutgers, a 16-point underdog, took a 10-0 first-half lead on Jacque LaPrarie's 31-yard touchdown pass to Alan Andrews in the first period and Alex Falcinelli's 50-yard field goal with one second left in the second quarter.

Louisiana Tech routs Lamar

RUSTON, La. (AP) — Quarterback Matt Dunigan passed for three touchdowns in helping Louisiana Tech maintain its No. 5 ranking in NCAA I-AA and its Southland Conference lead with a 40-13 rout of Lamar.

Dunigan, closing in on several of Terry Bradshaw's passing marks, completed 20 of 34 passes for 233 yards as Tech improved to 5-1 overall and 3-0 against Southland opponents. Lamar slid to 3-3 and 0-1.

Dunigan also was intercepted once before retiring midway in the fourth quarter, but he made up for that with touchdown passes of 17 yards to flanker Chris Tilley, 5 yards to tight end Bruce Lininger and 8 yards to tight end Gerald McDaniel.

Gene Mayer upsets boiling Connors

TENNIS—Gene Mayer upset an angry Jimmy Connors, the No. 1 seed, 6-3, 2-6, 6-3, and John McEnroe whipped Steve Denton 6-3, 6-1 Saturday night in the Custom Credit Australian indoor semifinals as the umpire Peter Duncan, was replaced after a series of incidents during the second set. Pointing at Duncan, Connors told tournament referee Bill Gilmour: "One of us has to go."

Gilmour soothed a boiling Connors into continuing, but after the first point of the fourth game of the second set when Duncan first ruled a Mayer shot in, then out, then in again. Gilmour was called to the court, ruled a let be played and turned to leave.But an angry Connors called him back and refused to play on under Duncan. Duncan finally was replaced by Max Ward in the umpire's chair at the beginning of the sixth game of the second set...

Lisa Bonder defeated Phyllis Blackwell 6-4, 6-4 and Sherry Solomon beat Laura Arraya 7-5, 7-6 to gain the Borden Classic finals...Top-seeded **Ivan Lendl** and **Wojtek Fibak** to gain the Naples WCT finals. Lendl beat Johan Kriek 6-4, 6-4, 7-5 and Fibak beat Tomas Smid 6-1, 6-3, 5-7, 6-1...Top-seeded **Yannick Noah** beat Jay Lapidus 6-3, 6-2 and **Mats Wilander** beat Tomas Hogstedt 6-1, 7-5 in the Swiss Indoor semis...

GOLF—Sandy Lyle of Britain defeated **Tom Kite**, 8-7, and defending champion **Severiano Ballesteros** defeated Lanndy Wadkins, 3-1, in the Suntory World Match Play semifinals at Virginia Water, Eng., to advance to today's 36-hole final...

FOOTBALL—Senior halfback Richard Johnson, the leading rusher this season for the University of **Colorado**, was arrested for second-degree burglary, a reported theft of more than $1,000 worth of stereo equipment from a UC athletic dorm, and did not travel with the team to its game at Oklahoma State...

BASEBALL— Yujiro Miyako and Kazuhiko Ushijima combined to pitch the Chunichi Dragons to a 3-2 victory over the Taiyo Whales of Yokohama; moving the Nagoya club closer to its first Central League pennant in eight years. Hanshin Tigers beat Hiroshima Carp 9-4 in Hiroshima. The Tigers' Masayuki Kakefu hit his 35th homer of the season, tops in the league...

Five Texas athletic greats were inducted Texas Sports Hall of Fame. From left, Roger Staubach, Don Maynard, Bud McFadin, Dave Williams and Gordon Wood.

Staubach heads Hall inductees

GRAND PRAIRIE, Texas (AP) - Retired Dallas Cowboys quarterback Roger Staubach and the second leading professional football receiver of all-time, Don Maynard, headline a group of five who have been voted into the Texas Sports Hall of Fame.

Besides Staubach and Maynard, the 21-member Hall of Fame selection committee of the Texas Sports Writers Association also named defensive lineman Bud McFadin and two coaching honorees still active. They are Gordon Wood, Brownwood High School football coach, and Dave Williams, University of Houston golf coach.

Maynard, whose pro career ended in 1973, still holds two National Football League receiving records, 1,834 yards gained and 50 games with 100 or more yards gained. He is No. 2 in catches wth 633,and in touchdowns with 88.

The former Texas-El Paso halfback played 13 of his 16 pro seasons with the New York Jets and was the favorite receiver of Joe Namath on the 1968 team that won Super Bowl III.

Staubach led Dallas to four Super Bowls. The former Heisman Trophy winner from Navy compiled a regular season record of 85-29 and was 11-6 in playoff games.

McFadin was an All-American lineman at Texas and played five years with the Los Angeles Rams.

Wood, 68, is in his 40th campaign as a head coach. His teams have won nine state titles, five more than any other coach in Texas schoolboy history.

His overall record before Brownwood met Cleburne Saturday night was .827: 379-75-11.

Williams has coached the Cougars to 14 NCAA golf titles. His first was in 1956. His 14th was in June of this year. In his 32 years at Houston, Williams has produced 317 tournament titles and 45 All-Americans

Arizona FG nips Notre Dame at wire

SOUTH BEND, Ind. (AP) — Max Zendejas' third field goal of the game, a 48-yarder as time ran out Saturday, lifted Arizona to a 16-13 victory over previously unbeaten and ninth-ranked Notre Dame.

The Wildcats. who had trailed 10-0, mounted a final drive from their own 20, with quarterback Tom Tunnicliffe firing 19 yards to Brad Anderson to set the ball at the Irish 32 with six seconds remaining. After Arizona called time out, Zendejas drilled home the winning points as the clock ran out.

Arizona scored its only touchdown of the game midway through the fourth quarter as Phil Freeman capped a 79-yard drive by plunging the final yard.

Notre Dame, seeking its fifth victory, took an early 10-0 lead on a 25-yard TD gallop by freshman Allen Pinkett and a 22-yard field goal by Mike Johnston.

But early in the third quarter, Arizona's Ray Moret intercepted a Blair Kiel pass to set up Zendejas' first field goal, a 38-yard boot, and Don Be'Ans stripped the ball from Joe Howard on the ensuing kickoff for a Wildcat first down at the Notre Dame 14. Although Arizona could not gain, Zendejas nailed a 32-yard field goal to pull the Wildcats within 10-6.

The Irish, plagued by turnovers all day, managed only one score in the second half, that coming on a 43-yard field goal by Johnston to build a 13-6 cushion.

Notre Dame's final drive bogged down on the Arizona 42, and punter Mike Vircola kicked into the Arizona end zone, moving the ball back to the Wildcat 20, from where Tunicliffe engineered the winning score.

Huskers whip K-State, 42-13

LINCOLN, Neb. (AP) — Junior I-back Mike Rozier scored two touchdowns and gained 204 yards to lead No. 6-ranked Nebraska to a 42-to-13 Big 8 Conference victory Saturday over Kansas State.

Rozier's performance on 21 attempts placed him as the eighth all-time leading Husker rusher. He became the second person to rush for more than 200 yards in consecutive games.

Senior I-back Roger Craig, who has been slowed by a thigh injury, carried seven times for 20 yards and became the Huskers' seventh all-time leading rusher.

Nebraska, 5-1, took a 21-to-3 halftime lead on touchdown runs of 27 and 46 yards by Rozier and 3 yards by fullback Doug Wilkening.

Kansas State scored on a 44-yard field goal by Steve Willis in the first quarter.

The Wildcats, 3-2-1, came back in the third quarter with a 1-yard touchdown run by quarterback Darrell Dickey and a 45-yard field goal by Willis, his longest ever.

Nebraska scored twice in the third quarter on a 2-yard pass from quarterback Turner Gill to tightend Jamie Williams and a 19-yard run by I-back Jeff Smith.

Husker reserve quarterback Bruce Mathison with 5:38 left in the game scored on a 5-yard run.

Nebraska is 2-0 in the conference and Kansas State is 0-2.

Colorado 25, Oklahoma St. 25

STILLWATER, Okla. (AP) — Tom Field kicked his fourth field goal as the clock ran out Saturday and gave Colorado a 25-25 tie with Oklahoma State, while the Cowboys' Ernest Anderson joined the ranks of football's elite by rushing for more than 1,000 in the season's first five games.

Field's 49-yard kick squelched a Cowboy rally engineered by quarterback Ike Jackson, who led a pair of 11th-hour scoring drives with long, dramatic passes.

Field also scored on kicks of 46, 27 and 34 yards.

Anderson raised his season total to 1,042 yards, with 205 yards against Colorado. Only Marcus Allen of Southern Cal gained more yardage in the first five games of a season, rushing for 1,136 in 1981. And Anderson is the only Big Eight player to ever break the 1,000-yard barrier in the first five games of a season.

THE ROCKIES

Colorado State stuns Air Force

AIR FORCE ACADEMY, Colo. (AP) — Junior quarterback Terry Nugent passed for one touchdown and ran for another and Jon Poole kicked two field goals as Colorado State defeated Air Force 21-11 Saturday in Western Athletic Conference football.

The Rams, who squared their WAC record at 2-2 and overall mark to 3-3, capitalized on an Air Force turnover to move to a 14-0 third-quarter lead.

Air Force rallied early in the final quarter, as Sean Pavlich kicked a 42-yard field goal and halfback Derek Foster ran 19 yards for a touchdown, drawing the Falcons within 14-11 with 12:48 remaining.

Nugent's 1-yard touchdown run iced the victory.

The loss dropped the Falcons to 2-2 in league play and 3-4 overall.

Fullerton State 20, Wyoming 16

LARAMIE, Wyo. (AP) — Fullerton State, lead by the passing of freshman quarterback Alex Espinoza, edged a stumbling Wyoming football team 20-16 Saturday.

Espinoza, a 6-foot-1 product of East Los Angeles, passed 20 yards to James Pruitt for a touchdown with three minutes left in the first half to give the Titans a 14-10 lead they never lost.

Wyoming was hit hard by turnovers, losing three times by interceptions, including two that stopped Cowboy drives inside the 10-yard line. The third interception was of a Brad Baumberger pass intended for Cowboy receiver Steve Martinez on the second play of the game and set the tone for the matchup.

Utah 24, Nev.-Las Vegas 14

SALT LAKE CITY (AP) — Utah's Carl Monroe rushed for 160 yards, but it took a pair of turnovers and a quarterback keep to give the Utes a 24-14 victory over Nevada-Las Vegas Saturday.

The win counts as a Western Athletic Conference victory for Utah. The Utes are 2-1 in the WAC and 3-3 for the season. UNLV, 0-1 in the Pacific Coast Athletic Association, is 1-5 for the year.

Wichita 28, NM State 26

WICHITA, Kan. (AP) — Senior quarterback Prince McJunkins ran for two touchdowns and threw for two more to lead Wichita State to a 28-26 victory over New Mexico State Saturday in a Missouri Valley Conference game.

The win boosted Wichita State's record to 6-1 overall and 3-0 in the conference. New Mexico State dropped to 1-6 overall and 1-3 in conference play.

Brigham Young 39, Hawaii 25

PROVO, Utah (AP) — Quarterback Steve Young threw two touchdown passes and fullback Waymon Hamilton rambled for two more as Brigham Young amassed 503 yards in total offense to gain a 39-25 Western Athletic Conference victory over Hawaii Saturday.

Young's passes went 4 yards to reserve tight end Steve Harper and 52 yards to Neil Balholm and Hamilton scored from 12 yards and 26 yards as BYU remained in the thick of the WAC championship by raising its record to 3-1. The Cougars are 4-2 overall.

Quarterback Bernard Quarles threw for two touchdowns and ran for another for Hawaii, which saw its WAC championship aspirations dimmed. The Rainbow Warriors now are 3-2 in conference play and 4-2 overall.

Young, the nation's total offense leader with 339 yards per game, extended BYU's 19-18 halftime lead with a 52-yard pass to Balholm with just 42 seconds gone in the third quarter. The kick failed and BYU led 25-18.

For the game, Young completed 22 of 32 passes for 302 yards and rushed for 15 yards. As a team, BYU had entered the game second in the nation in total offense at 474 yards per game.

Angelo State blisters ACU

SAN ANGELO, Texas (AP) — Statistics are nice, but they don't put points on the scoreboard, Angelo State coach Gerry Vandergriff said after his Rams defused the powerful passing attack of Abilene Christian and raced to a 24-14 victory Saturday.

The Rams got two early touchdowns from Ernest Pennington and held off a late Abilene Christian rally for a Lone Star Conference victory.

Angelo State outgained Abilene Christian 158 yards to 88 on the ground and 229 to 180 in the air. The Rams plucked off four Abilene Christian passes.

The Rams built a 10-0 lead on Mike Thomas' 23-yard field goal and a 1-yard run by Pennington. With 26 seconds remaining in the first half, Pennington capped a seven-play, 90-yard drive with a 2-yard run raised the margin to 17-0.

But Abilene Christian's Steve Parker took the following kickoff seven yards deep in the end zone and returned it for a touchdown as the Wildcats sliced the lead to 17-6 at the half.

Ram quarterback Slade Sherrod, who completed 15 of 31 passes for 229 yards, hit split end Michael Elarms with a 23-yard touchdown pass midway through the third quarter to give ASU a commanding lead at 24-6.

The Wildcats rallied in the fourth quarter behind the passing of Loyal Proffitt, the LSC's passing leader. ACU's Vin Smith intercepted a Sherrod pass at the Angelo State 32 early in the final period, and the Wildcats covered the distance in nine plays.

Anthony Thomas scored on a 1-yard run with 8:57 remaining, and Proffitt passed to Edward Gardner for the two extra points.

Texas-Arlington 30, SW Louisiana 29

ARLINGTON, Texas (AP) — Danny Jackson threw a 28-yard touchdown pass to end Byron Williams with 27 seconds left and then completed a 2-point conversion to give Texas-Arlington to a 30-29 upset over Southwestern Louisiana Saturday in a non-conference football game.

Jackson, who completed 16 of 29 passes for 264 yards and two touchdowns, dispatched tight end Ben Young to the left corner of the end zone for the winning two points.

The loss was the second straight for the Ragin' Cajuns after a 4-0 start that included victories over Rice and North Texas State. The Mavericks improved their record to 2-4.

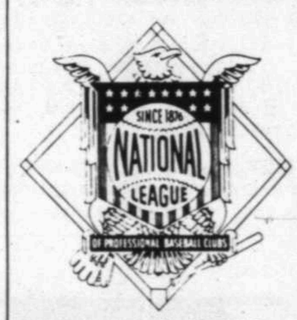
Texas Lutheran 17, Prairie View 6

PRAIRIE VIEW, Texas (AP) — Mike Cantu scored twice, rushed for 98 yards and completed 7 of 11 passes for 127 yards to lead Texas Lutheran past Prairie View 17-6 Saturday.

Reserve quarterback Maurice Mitchell took Prairie View 72 yards in 11 plays for the Panthers' only touchdown, hitting Roland Ratcliff on a 15-yard scoring pass with 11 seconds left in the game.

Baseball scorecard

American League	World Series	All-Star Games
	45 wins	18 wins



National League	World Series	All-Star games
	33 wins	1 tie 34 wins

Since 1903, the American League has won more World Series pennants than the National League. In All-Star games, however, National League players had more wins.

Rent It or Own It

by Bob Howle

It is not often that one throws a large party. In fact, parties may not exactly be a favorite occasion for you. However, in many circles, they are common and, as long as you attend the gatherings of others, you will someday be called upon by your own conscience to do some entertaining yourself. If you take the time to discuss the situation with a rental store, they can often make your house look like it was designed for whatever occasion you had in mind. They will have everything from tables and chairs to hot plates and party decorations. When you see how attractive your home looks on the eve of your party, your efforts will have been rewarded.

No party too big, no touch too unimportant, no task insurmountable....this can be your motto for any gathering or function when you utilize the services of BOB'S RENTAL CENTERS INC., 2700 Rankin Hwy. 685-1271, & 2909 N. Big Spring, 684-8294. To get ready for the party, to insure that the function goes smoothly and even to clean up after the event, we have everything you need to make your big day complete. Come in soon to BOB's RENTAL CENTERS INC. and discover how any task can be a "party" when you rent what you need. Open 8-6 Mon.-Sat.

Handy Hint:

To accommodate large groups of guests - see us for all your needs.

Rebel aerials overcome Froggies

OXFORD, Miss. (AP) — Quarterback Kent Austin threw two touchdown passes, including a clinching fourth-quarter strike to James Harbour, to lift the Mississippi Rebels to a 27-9 football victory over the Texas Christian Horned Frogs on Saturday.

Austin, who finished with 15 of 21 passes for 177 yards, combined with Harbour on a 40-yard pass-run play for a touchdown with 13:34 left that iced the victory. Harbour took the ball over a defender's hands at the 20 and ran it in for the score.

The Rebels added another touchdown with 1:58 left when defensive end Matthew Lovelady recovered a fumble by Frog quarterback Reuben Jones in the end zone.

THE VICTORY by the Southeastern Conference Rebels snapped a three-game losing streak and evened their record at 3-3. The Southwest Conference Frogs fell to 2-4.

The Austin-to-Harbour play came after TCU made it 14-9 late in the third quarter on freshman Kenneth Davis' 1-yard touchdown plunge. Jones hit wide receiver Stanley Washington on a 35-yard pass as the Frogs moved 81 yards in eight plays for the score.

The Frogs battled back after falling behind 20-9 as Jones directed TCU 71 yards to the Mississippi 1 on the series after Harbour's touchdown. But free safety Barry Wilburn intercepted Jones' fourth down pass in the end zone with six minutes left.

Jones completed 17 of 27 passes for 252 yards.

AUSTIN'S OTHER touchdown pass came on the Rebels' first possession. He hit split end Michael Harmon on a 21-yarder for a touchdown on third and 9 with 8:37 left in the first quarter.

The Rebels covered 78 yards in eight plays, including Austin's 6-yard pass to tight end Michael Smith.

In the second quarter, the Rebels went ahead 14-0 with a 54-yard drive capped by fullback Kinny Hooper's 1-yard dive.

Texas Christian threatened on the next series with Jones hitting passes of 19 yards to tight end Bob Fields and 17 yards to Stanley Washington as the Frogs moved to the 13. But Ken Ozee missed a 31-yard field goal.

Ozee got another chance a few seconds later when linebacker Ron Zell Brewer recovered tailback Danny Jansen's fumble at the Rebel 26. Ozee kicked a 39-yarder for a 14-3 score.

The Rebels had another second-quarter chance when defensive end Bryan Kennedy recovered a fumble at the Mississippi 42. But Todd Gatlin missed a 47-yard field goal attempt.

Barber's third 66 leads Seniors

MELBOURNE, Fla. (AP) — Miller Barber shot his third straight 6-under-par 66 round Saturday, giving him five-stroke lead going into the fourth and final round of the $135,000 Suntree Seniors Classic.

The three-day total of 198 at the Suntree Country Club set a new scoring record for the Professional Golfer's Assocation's senior tour, and puts Barber in commanding position to win the $22,500 first prize.

No progress in NFL talks

Negotiations in trouble

By IRA ROSENFELD

COCKEYSVILLE, Md. (AP) — Negotiations to end the 26-day National Football League players' strike are in serious trouble, sources close to both sides agreed Saturday.

Meanwhile, NFL Commissioner Pete Rozelle indicated the two sides had a long way to go before reaching an agreement, but refused to speculate whether the entire season was being jeopardized by the prolonged negotiations.

Sam Kagel, a private mediator who entered the talks Tuesday night, was shuttling negotiators in and out of his suite. With a news blackout in effect, no statements were issued, but sources said progress was at a virtual standstill Saturday, with the key economic issues yet to be touched upon.

"Overall, the talks are in serious trouble. I am usually optimistic but now I am unsure whether there will actually be a settlement," said a source close to management.

A SECOND source, contacted prior to Kagel's reinforcing the news blackout and resumption of bargaining Saturday, agreed and said union negotiators were concerned management was "stalling the talks, awaiting marching orders from the owners."

The owners' six-member executive committee was to meet this weekend in New York, reviewing its options on the remainder of the season.

Rozelle, in a telephone interview from his home in Harrison, N.Y., refused to characterize the status of the talks, but did say, "Nothing would cause you to think that we're imminently going to have something."

Saturday, Kagel said in a terse statement the parties were "engaged in intense, continuous negotiations on non-economic issues."

Kagel has reverted to shuttle diplomacy in an attempt to keep the talks alive. The two sides have not met since Thursday night, except for an acrimonious five-minute encounter Friday.

The talks broke down Friday when the union said management had demanded the dropping of an unfair labor practice complaint against the league as a precondition to further bargaining, and the Management Council said the union was attempting to add new isues to the talks, including the right to institute new litigation after an agreement.

THE UNION stages its first "all-star" game Sunday at Washington's RFK Stadium, with a second game set for Monday night in Los Angeles. The games are being bankrolled by Turner Broadcasting System, a cable television network.

The Associated Press has learned that the format of future union-organized games was to be discussed at a secret meeting here involving TBS President Robert Wussler and union officials.

Among the items for discussion, according to union sources, was the changing of the games' format, discarding the all-star concept in future games in favor of one bringing together two teams reflecting actual franchises.

Union officials, who asked not to be identified, confirmed the meeting and said it involved the game's format but declined to be specific.

As an example of the management "stalling" tactics being alleged by the union, a source late Friday night said the owners' negotiators have raised the question of "facial hair ... one of the items won by the players in the previously negotiated contract."

A MANAGMENT Council spokesman repeatedly refused Saturday to comment on the union allegations of stalling.

With the pace of the talks slowed, it appeared more certain than ever that a fifth weekend of the regular season would be affected by the strike which began Sept. 21. League officials have said that only two of the affected weeks could be made up, leaving — at this point — a 13-week season.

Pitt, Penn State waltz to easy wins

PITTSBURGH (AP) — Dan Marino, ending a four-game slump, threw for three touchdowns and 344 yards as third-ranked Pitt erupted in the second half to beat Temple 38-17 in college football Saturday.

Marino, despite throwing three costly interceptions, hit Julius Dawkins in the right corner of the end zone on a 21-yard touchdown play late in the third quarter to lift the unbeaten Panthers to a 24-17 lead.

THE EAST

Marino, completing 26 of 36 attempts for the day, then set up the first of two scoring runs by Bill Beach with a 51-yard pass play to Dawkins in the fourth quarter. Five plays later, Beach gave Pitt a 31-17 lead with 5:41 remaining by leaping into the end zone from a yard out.

Penn State 28, Syracuse 7

STATE COLLEGE, Pa. (AP) — Running back Curt Warner, whose contribution has been curtailed by Penn State's switch to a pass-oriented offense, broke loose for 148 yards and two touchdowns Saturday as the eighth-ranked Nittany Lions beat Syracuse 28-7 in the 60th meeting of the rivals.

Penn State quarterback Todd Blackledge completed 10 of 15 passes for 120 yards and twice dove across from the 1 for touchdowns.

It was the 12th straight victory for Penn State over Syracuse, and the Nittany Lions' fifth triumph this season against one loss. Syracuse's record dropped to 1-5.

Penn State took advantage of a wind-blown 21-yard Syracuse punt and the first of two pass interceptions by Dave Paffenroth to build a 14-0 lead with 12:34 left to play in the first half.

W. Virginia 16, Virginia Tech 6

BLACKSBURG, Va. (AP) — Paul Woodside booted three field goals and Jeff Hostetler fired a touchdown pass as West Virginia's 13th-ranked Mountaineers cashed in on Virginia Tech turnovers Saturday to escape with a 16-6 football victory over the Hokies.

The triumph improved the Mountaineers' record to 5-1 while Virginia Tech slipped to 3-3.

Woodside, a sophomore, connected from 44, 17 and 35 yards, and wide receiver Wayne Brown made a diving catch in the end zone of a 10-yard pass from Hostetler.

The Hokies' only scores came on Don Wade field goals of 37 and 27 yards.

The game was played before 52,300 fans, the largest crowd ever to see a sporting event in Virginia.

Punting into a 23-mile an hour wind, Steve Superick sent a low liner that hit the Hokies' Bob Thomas in the back with Scott Dixon recovering on the Tech 20 to set up West Virginia's only touchdown.

Navy 39, W&M 3

ANNAPOLIS (AP) — Quarterback Marco Pagnanelli ran for two touchdowns and set up two others with key pass completions Saturday, guiding Navy to a 39-3 victory over William & Mary.

The junior quarterback completed 17 of 25 passes for 217 yards before he was shaken up and left the game late in the third quarter. Pagnanelli was not seriously injured, and returned in the fourth qurter to hold the ball on an extra point conversion.

Army 20, Princeton 14

PRINCETON, N.J. (AP) — Backup quarterback Rich Laughlin raced 56 yards for a second-quarter touchdown to give Army a lead the Cadets guarded for a 20-14 victory over Princeton Saturday.

Princeton quarterback Brent Woods helped the Tigers to a 14-0 lead with 4-and 1-yard touchdowns in the first quarter.

But Army had cut Princeton's lead to 14-10 by halftime on Craig Stopa's 34-yard field goal and starting quarterback Nate Sassaman's 3-yard scoring run.

Lafayette 35, Penn 20

EASTON, Pa. (AP) — Lafayette quarterback Frank Novak threw two touchdown passes to flanker Jack Gatehouse and another to fullback Craig Williams and the Leopards repelled a Pennsylvania comeback effort for a 35-20 college football victory Saturday.

Penn came into the game with a 4-0 record and a No.10 ranking in the NCAA Division I-AA. Lafayette is now 3-3.

Novak threw to Gatehouse for touchdowns of 17 and 26 yards to give Lafayette a 14-0 halftime advantage. In the third period, Williams scored from 33 yards on a screen pass to widen the gap to 21-0.

Penn rallied with a 70-yard scoring drive, capped by fullback Chuck Nolan's 2-yard plunge. But Lafayette went 54 yards on the next series, with halfback Nick Kowgios scoring on a 7-yard run.

Quarterback Gary Vura, who set a Penn record with 28 completions, brought the Quakers within 28-20 on touchdown passes to split end Jim O'Toole and tight end Jeff Schulte before Lafayette successfully covered an onsides kick and marched 53 yards for a closing score. Williams ended the drive with a 6-yard run.

Novak, the top Division I-AA passer coming into the game, completed 14 of 22 passes for 195 yards.

Lehigh 20, N.Hampshire 17

BETHLEHEM, Pa. (AP) — Senior halfback Ed Godbolt gained 170 yards on 37 carries, caught five passes for 47 yards and scored the winning touchdown Saturday as Lehigh defeated New Hampshire 20-17 for its second football victory of the season after four losses.

The winning touchdown was a 21-yard throw to Godbolt from freshman quarterback Marty Horn with 9:53 left in the game. The Wildcats immediately moved to the Lehigh 16, but came away empty as Rusty Foster missed a 33-yard field goal with 6:45 remaining.

Make a Choice At Home Savings

HIGH RATE CERTIFICATE

12½%

Your chance to save money is here! **Home Savings' "HIGH RATE CERTIFICATE"** is a sure bet. With a 42 month certificate you have a choice of either a **FIXED** rate for the length of the term or have it **ADJUSTED** every 6 months (June 30th and December 31st) at 1-1/2 points below Chase Manhattan prime lending rate. **YOU CAN'T LOSE!**

No Minimum Balance and you can add to your adjusted Rate Certifacte at any time (within first year) without extending maturity date.

LIQUIDITY CERTIFICATE

SHORT TERM

Sometimes it's necessary to invest your money on a short term basis. So, at **Home Savings** we have just the right Certificate for you — The **Liquidity Certificate** with terms varying from 7 - 31 days. It offers High Rates of return but with More Liquidity . . . **Just what you need!** $20,000 Minimum.

* Note: Rates subject to change without notice. Substantial Penalty for early withdrawal.

Call Southwest Airlines, **563-0750,** or your travel agent for reservations.

Women's City qualifying play set on Thursday

Susan Britton...seeks No. 11

Qualifying round play in the Midland Women's City Golf Tournament is Thursday and deadline for entry is Tuesday.

The three-day tournament will be held at Hogan Park Golf Course Oct. 26-28.

Entries should be mailed to Mrs. James Colter, 3618 W. Shandon, Midland, or sign up at any of the Midland golf clubs.

Any woman golfer, who is at least a 30-day resident of Midland, is eligible.

Registration is Thursday at Hogan Park and the entry fee is $20, carts not included.

Susan Britton is the defending champion and will be seeking her 11th title. Top contenders include Nina Colter, Jane Thomas, Mary Robinson and Sylvia Roberts.

Special prizes will be awarded to nearest to the hole, long drive, putting and chipping.

Following play Oct. 28, an awards party will be held at the former Hogan Park club house.

Dupree sparks Sooners, 38-14

LAWRENCE, Kan. (AP) — Marcus Dupree, Oklahoma's highly touted freshman running back, galloped for three touchdowns Saturday and quarterback Kelly Phelps added two more to carry the Sooners to an easy 38-14 football victory over Kansas.

Dupree scored the second time he touched the ball, racing 75 yards for a first-quarter touchdown that put Oklahoma ahead 10-0, then added a 13-yard scoring run in the third quarter and a 7-yard touchdown dash in the final period.

The 6-foot-3, 210-pound running back, considered the top high school recruit in the country last season, finished with 158 yards on only nine carries.

PHELPS, A SENIOR, scored on a pair of 1-yard runs in the second quarter as the Sooners, 4-2 overall and 2-0 in Big Eight play, used their relentless running attack to take a 24-0 halftime lead.

Oklahoma built its cushion to 31-0 before Kansas, 1-3-2 in all games and 0-1-1 in the league, finally got on the board on Kerwin Bell's 1-yard run midway through the third quarter, but the Jayhawks missed the two-point conversion attempt.

After Dupree's third touchdown made it 38-6, Kansas reserve quarterback Mike Frederick hit Wayne Capers with an 11-yard touchdown pass and the Jayhawks added a two-point conversion to end the scoring.

ANSWER MAN KNOWS IT ALL

Goodyear Kite to cover NFLPA Stars

By SCOTT OSTLER
The Los Angeles Times-
Washington Post News Service

The Answer Man gives it 110 percent . . . .

Q. The NFL players' all-star game Monday night in the Los Angeles Coliseum — isn't this event an insult to the fans' intelligence? Isn't it an embarrassingly poor substitute for the real thing?

A. Nonsense. You'll realize it's an important event attracting widespread interest when, on game day, you look up into the sky above the Coliseum and see floating overhead the majestic Goodyear Kite.

Q. Are you mad as heck when you're watching the climax of a playoff game on TV, and just after the final out, when a wild celebration is erupting on the field, the TV director gives you a 10-second closeup of the face of the winning manager's wife!?

A. Damn right I am! I want to see his in-laws, too.

Q. During a Cardinals-Braves playoff telecast, color commentator Tom Lasorda defended himself for taking Fernando Valenzuela out of the Dodgers' final game, a move that probably cost his team the league championship. Lasorda told millions of TV viewers that Valenzuela had told pitching coach Ron Perranoski he was tired. Yet, Valenzuela has denied this, and so has Perranoski. What gives?

A. Lasorda's credibility.

Q. Got any good recent Howard Cosell-isms?

A. During the playoffs he called play-by-play man Al Michaels "Alfalfa."

Q. What was Cosell talking about when, during a rain delay, he said, "Should this game not be capable, meteorologically, of resumption . . ."?

A. He was referring to the eventuality of a meteor shower, in which case the surviving spectators would be given meteor checks.

Q. During the same rain delay in Milwaukee, the cameras turned to the broadcast booth. Why did Cosell have an umbrella? Isn't the booth covered?

A. That wasn't an umbrella, it was his hairpiece.

Q. To fill the void left by the strike, new TV shows are planned, including an NFL Players Superstars competition. Do you have any secret inside info on any other new shows?

A. They don't call me "Scoop" because I walk my dog, pal. NBC is coming out with "NFL Players in Real Jobs." The first week, Joe Montana drives a bus and Hacksaw Reynolds works a checkstand at a K-Mart. CBS will counter with "NFL Owners Go to Marine Boot Camp."

Q. Your opinion, please: Do you think Garvey deserves to stay?

A. Steve Si; Ed, no.

Q. A Lot of people are disappointed at the teams that made it to the World Series, Milwaukee and St. Louis. Not that they're not good teams, but nobody knows their players, so the games will be dull. What matchup would you rather see?

A. Reggie Jackson vs. Chuck Wepner.

Q. The controversy over whether umpires should be allowed to use instant replays to help them on controversial calls was revived during the recent playoffs. Earl Weaver came out strongly against the use of replays. He expressed this view after one controversial decision, which was followed by a lengthy and heated argument on the field, meetings between various groups of umpires and managers and players, a review of the rule book and several TV commercials. On what grounds does Weaver object to use of replays?

A. It would slow down the game too much.

Q. Another announcer indicated that he, too, would hate to see replays used by umpires. He expressed his opinion after first reading us a radar-gun speed figure on the pitcher, a space-satellite weather forecast and a computer printout of a certain pinch-hitter's tendencies against a certain pitcher. On what grounds did this announcer object to the use of replays?

A. It would take the human element out of the game.

Forsch, Caldwell pitch today

(Continued from 1C)

LaPoint had yielded just five hits through the first six innings, but with one out in the seventh, he committed a costly error that would make all six runs unearned.

Ben Oglivie hit a routine grounder to Keith Hernandez at first and LaPoint, covering the bag, dropped the ball. Don Money then stroked a single to right that sent Oglivie to second.

LaPoint got Charlie Moore to pop to shortstop, but Jim Gantner scored Oglivie with a double.

Doug Bair relieved LaPoint, walking Paul Molitor and giving up a two-run single to Yount. Molitor made it to third on Yount's hit, and Cooper came up to face 43-year-old left-hander Jim Kaat, who was no more successful than Bair.

Cooper slapped a single off the glove of third baseman Ken Oberkfell, scoring Molitor as Yount raced to second. Yount and Cooper each advanced one base on a wild pitch by Kaat, who then was relieved by rookie Jeff Lahti.

Lahti came in with a 2-1 count on Ted Simmons, whom he walked intentionally to load the bases.

Thomas, with only two hits in 11 previous Series at-bats and robbed of a home run Friday night on a leaping catch by the Cardinals' Willie McGee, rapped a sharp single to left that scored Yount and Cooper.

Oglivie was walked intentionally to reload the bases, and the inning finally ended to a deafening cheer from 56,560 fans at Milwaukee County Stadium when Money, the 12th Milwaukee batter in the seventh, flew to left.

ON A CRISP, windy day with temperatures in the 40s, the Cardinals scored a run in the first inning and three in the second off Milwaukee starter Moose Haas.

Tom Herr and Oberkfell, the 1-2 hitters in the St. Louis lineup, played major roles in this mini-melodrama.

With one out in the first inning, Oberkfell doubled to right field. Haas then fanned Hernandez, who has yet to get a hit in the Series, and George Hendrick came to bat.

Hendrick, with just one hit in nine previous Series at-bats, was protecting the plate with an 0-2 count. It wasn't a mighty swing, but he hit a chopper on the shortstop side of second base. Yount tried to field the ball on a short hop, but it kicked off his glove for a single into center field, as Oberkfell scored.

Buckeyes strike late to upset Illini, 26-21

CHAMPAIGN, Ill. (AP) — Freshman Rich Spangler, who had missed three field goals earlier in the game, kicked a 27-yard field goal with eight seconds to go Saturday and the Buckeyes scored on a safety seconds later to upset 15th-ranked Illinois 26-21 Saturday.

OSU quarterback Mike Tomczak had thrown 74 yards for one touchdown and jumped over the goal line for another to give the Buckeyes a 21-7 fourth quarter lead.

But Illinois rallied for 14 points in the final quarter to tie the game. Freshman Thomas Rooks raced 21 yards for one TD, and Eason passed five yards to Kirby Wilson for a second.

Tomczak 69 yards in 14 plays to set up Spangler's game-winning kick. Then the Buckeye defense sacked Illini quarterback Tony Eason in the end zone on the final play of the game, and the Illini had lost their

A homecoming crowd of 73,488 — the-second largest in Memorial Stadium history — watched the Illini drop to 5-2, and the Buckeyes improve to 3-3. The loss was their first in the Big 10.

Michigan 29, Iowa 7

IOWA CITY, Iowa (AP) — Reserve tailback Rick Rogers ran for two touchdowns and Steve Smith passed for another to lead Michigan to a 29-7 victory over Iowa in Big 10 Conference football Saturday.

Smith threw an 11-yard touchdown pass to Vince Bean to give Michigan a 12-0 halftime lead and Rogers scored on runs of one and five yards in the second half as the Wolverines remained unbeaten in conference play and avenged a 9-7 loss to Iowa last year.

Michigan, which turned the game around by recovering an Iowa fumble near itsown goal line midway through the second quarter, sent its record to 4-2 overall and 4-0 in the Big 10. Iowa, which had a three-game winning streak broken, fell to 3-3 and 2-1.

Wisconsin 24, M-State 23

MADISON, Wis. (AP) — Defensive back David Greenwood picked off a Michigan State try at a 2-point conversion pass after a touchdown with only 13 seconds to play, preserving a 24-23 Wisconsin victory Saturday over the Spartans.

Michigan State, 0-6, had scored on a 9-yard pass from quarterback John Leister to Ted Jones on the previous play, stunning most of the 78,182 Camp Randall fans who saw the Big Ten victory about to slip from their grasp.

But Greenwood, stepping in front of intended receiver Otis Grant, neatly intercepted the pass and scampered joyfully along the sidelines to clinch Wisconsin's fourth consecutive victory.

Wisconsin was forced to punt after receiving the second half kickoff. Michigan State then marched 88 yards in 15 plays with halfback Aaron Roberts scoring on a 1-yard plunge. The extra point was good, and the Spartans led 17-16.

Wright set up the score by completing a 12-yard pass to David Keeling and a 21-yard pass to Jeff Nault, highlighting an 80-yard drive.

Purdue 34, Northwestern 21

WEST LAFAYETTE, Ind. (AP) — Tailback Mel Gray rushed for a career-high 193 yards and two touchdowns Saturday as Purdue ended a nine-game losing streak, its longest in 74 years, with a 34-21 Big Ten Conference football victory over Northwestern.

Gray's touchdowns on runs of 2 and 1 yards in the second quarter gave the Boilermakers a 14-7 halftime lead. Then, with quarterback Scott Campbell directing the passing attack, the Boilermakers took control after recovering a Northwestern fumble early in the third period.

A 34-yard pass to Cliff Benson, coupled with a Northwestern penalty, gave Purdue the ball at the 16-yard line. Four plays later, Campbell rifled an 8-yard scoring strike to Derrick Taylor.

The victory lifted Purdue to 1-4 in the Big Ten and 1-5 for all games. Northwestern, losing to Purdue for the eighth straight year, dropped to 1-4 in the conference and 2-5 overall.

THE BIG TEN

No. 19 Florida State wrecks record book, 56-17

TALLAHASSEE, Fla. (AP) — Sophomore tailback Greg Allen scored four touchdowns as 19th-ranked Florida State rolled up a school-record 706 yards total offense to crush East Carolina 56-17 in college football action Saturday night.

Allen caught a 24-yard scoring pass from quarterback Blair Williams and also scored on runs of 1, 5 and 1 yards as the Seminoles amassed 456 yards passing and 250 yards on the ground.

The offensive output eclipsed the previous school record of 626 yards set against Memphis State in 1969.

Florida State, 5-1, spurted to a 21-0 lead midway through the second quarter before the Pirates, 3-3, got on the scoreboard with Jeff Heath's 39-yard field goal.

Williams, who alternated with starting quarterback Kelly Lowrey, threw for three touchdowns. In addition to his scoring toss to Allen, the senior threw 2 yards to Hassan Jones and 16 yards to Weegie Thompson in the fourth quarter.

Williams completed 12 of 16 passes for 223 yards, while Lowrey hit 9 of 15 for 237 yards and two touchdowns. Lowrey's scoring passes covered 38 yards to Jones and 28 yards to Jesse Hester.

Defensive backs Harvey Clayton and Larry Harris both intercepted two passes that set up touchdowns for Florida State.

East Carolina fullback Ernest Byner ran 15 yards for a touchdown in the third period and the Pirates added a fourth-quarter score on tailback Tony Baker's 5-yard run.

Fletcher stops Green to retain USBA title

ATLANTIC CITY, N.J. (AP) — Frank Fletcher stopped David Green with a flurry of unanswered punches in the sixth round of their scheduled 12-round bout Saturday to retain his United States Boxing Association middleweight title at an Atlantic City casino.

Referee Frank Cappuccino stopped the fight at 1:12 of the round as Fletcher pummeled Green against the ropes. When the fight was stopped, Green was ahead 23-22 on the cards of Cappuccino and Judge Harold Lederman, while Judge Richard Murry had it 23-23.

Fletcher attacked Green from the outset of the sixth round, taking advantage of a cut he opened on Green's right eyelid in the fifth round.

"It's a lost feeling," Green said. "All I could see was the blood in front of me. I'm feeling his punches, but I can't even see him. No, I didn't stop throwing punches because I was tired."

"Before the fourth round, my corner started telling me to throw uppercuts," Fletcher said. "I know it wore him down. I looked in his eyes in the sixth round and I could see he didn't want to fight anymore."

Fletcher, a 5-foot-8 southpaw from Philadelphia, is ranked third by both the World Boxing Association and the World Boxing Council.

Fletcher boosted his record to 16-2-1, while Green, ranked eighth by the WBA, fell to 15-2.

Green, 24, of Irvington, N.J., opened the first round by attacking Fletcher, landing left hooks that kept his opponent pinned to the ropes.

Three left hooks by Green staggered Fletcher in the third round. Fletcher stumbled against the ropes, but did not fall and survived the round.

Fletcher took charge in the fourth round when he began fighting from the center of the ring, exchanging combinations with Green. In the fifth round, Fletcher landed a left uppercut that opened the cut on Green's right eyelid.

U

HOW TO RUN OPTIONS WITHOUT FUMBLING.

If every business decision was clear-cut, then business would be easy.

Business is not easy.

Good decisions demand a clear look at all of your options. Running them in conventional ways can take all day. You fumble with figures and calculators and pretty soon opportunity has quit knocking and gone to greener pastures.

Fumbling with different ways of making deals means losing ground.

Tackling them quickly and effectively means getting ahead.

Can you play? Can you afford not to?. For example, determining the amount of your participation in an oil deal requires quick knowledge of how a dry hole will affect your overall cash flow. Or how multiple shows will affect your bank account and tax return.

Here? Or There? If you're a manufacturer, how many replacement parts can you afford to have on hand? Which ones are in greatest demand? How productive is your work force? Your service people? Your sales people? If you cut back here, can you expand there? If you expand there, can you cut back here?

This Much? That Much? How Much? If you're a retailer, how much inventory can you afford to stock and how quickly must you move it? This much? That much? How much? Interest rates have changed by the time you come up with a conventional answer.

In lots of cases, running fast and accurate options can spell the difference between being in business and being in trouble. For less than you think, a compact business computer from Computers, Ltd. can help you run more options than you ever thought possible.

You'll make better decisions. You'll have better information. You'll stop fumbling and start gaining ground. The option is yours.

04 Card of Thanks

THE family of Peggy Stamy wishes to express appreciation to everyone for the many prayers, cards, letters and memorials to Hospice. Keller Stamy, husband; children; Peggy J., David, and Susan Callon.

CARD OF THANKS

For your loving help and sympathy shown us by so many friends at our time of grief, we would like to express our gratitude. We were indeed comforted by your kindness.
The Tom Lambdin Family

Dodge Ramcharger
In 1983, the only 2 Wheel Drive Sport Utility.

$1000 Rebate on 1982 and 1983 2 and 4 wheels drive Ramcharger.

LIST $13,877
Dealer Discount - $1645
Rebate - $1000
$11,232 Sale Price

Stock no. 1051

Just what is the difference between a 2 wheel and 4 wheel drive sport utility. Unless all terrain travel is important to you, consider these advantages in a 2 wheel drive. Less machinery in the 2 wheel Ramcharger means less on the sticker price and the cost of repair. 2 wheel drive uses normal highway tires for less cost and for a more comfortable ride. And the 2 wheel drive tows your boat, camper or trailer with as much ease as the 4 wheeler. Over all the 2 wheeler is a practical choice. But we of course, stock 4 wheel drive Ramchargers.

Your Comfort is Our Business.
We're Lincoln Property Company, the largest, most professional apartment managers in the nation. Our little extras make the big difference: 24 hour emergency maintenance, tasteful decorator schemes, exceptional landscaping.
We know you work hard to achieve the amenities of the good life. So LPC works just as hard to provide them. Come see our brand new all-adult 1 & 2 bedroom apartments, with ceiling fans, washer-dryer connections, fireplaces, and tennis courts.
There's more than one advantage in renting from #1.

RAMCON
BUILDING THE PETROPLEX
563-4480

natural energy HOME
The first year's payment and buyer qualification will be calculated equivalent to a rate of 8½% for 95% loan-to-value. Interest will be charged at a rate of 13½% for the first 6 months of the loan. After the first 6 months interest will be charged at the most recent 6months Treasury Bill rate plus 4.25%. Payments on these mortgages are graduated so as to increase the principal and interest payments 7.50% each year for the next 4 years. At the end of the first 5 year period, the graduation in payments will cease. A new payment schedule will be computed using a variable rate mortgage to amortize the remaining balance over the remaining 25 years of the mortgage based upon the then current Treasury Bill rate plus 4.25%. The 7½% maximum increase can be more if the original loan principle exceeds 125%. At each 5 year anniversary date, the payment may be adjusted to allow the remaining payments to fully amortize the loan. ANNUAL PERCENTAGE RATE APPROXIMATELY 14.28%
GAS, CLEAN ENERGY FOR TODAY AND TOMORROW. FHA/VA financing availble.

FREEDOM OF CHOICE

Our homes don't follow the same old pattern.

Not just another tract development, BROOKEHAVEN is unique in design, scope and purpose.

At BROOKEHAVEN, we offer you a selection of five floor plans, with ten exterior designs. You choose the carpet. You choose the wallcovering. Cabinets, vinyl, fixtures, appliances – all entirely up to you. You choose the style you want, where you want it. After all, no two people are alike!

"Seascape" features a central kitchen with walk-in pantry and abundant storage. The living room, overlooking an enclosed atrium, includes a vaulted ceiling with optional skylights and a woodburning fireplace. "Seascape" – expressing your individuality.

K-9 Korps

Don't pick a bone with deputy dogs

There are four members of the Midland Police Department who track down criminals and missing persons, detect drugs, conduct building searches, maintain crowd control and assist and protect fellow officers. They train hard, work nights and receive little more than room, board and a pat on the head for their efforts.

Their names are Rowdy, Casper, Edu and Casey — dogs who make up the department's K-9 Division. Well, they don't make up the entire division; they have a little help from patrolmen Lonnie Payne, Steve Smith, Pat Bostick and Sgt. Ed Nicks.

The police department has been using canines for about 10 years. All are purebred German shepherds ranging in cost from $3,000 to $5,000. They are bought with funds donated by Midland citizens to a Midland National Bank savings account that is used soley for the purchase of police dogs.

Many of the dogs were partially trained in Germany before being purchased and still take commands in German.

"When we got them their obedience was excellent and they had already been trained in aggression, so we just kind of converted them over to our needs," Payne explained. The dogs undergo extensive training before they are ready for patrol, and each has an area, such as tracking persons or finding drugs, in which he excells.

"We like to take at least two months (after obtaining the dogs) before we start working them on the streets," Nicks said. "It's at least six months after that before he becomes what I consider to be a street dog." A puppy needs about a year of training.

But the training doesn't stop once they've become a part of the division. The officers run the dogs through a training course one night a week for three to four hours, as well as work with them at home, teaching them things such as drug detection. And once a year the division has a workshop conducted by T. Patrick Cahill, a man who worked with Scotland Yard for 27 years, was head trainer of the K-9 unit there for 14 years, and started the Washington, D.C., K-9 Division.

The dogs also compete in state and national police dog competitions. "In the last four years, every time we have competed in the Texas Police Canine Trials one of our canines has always finished in the top three," Nicks said proudly.

The city's Parks and Recreation Department has allowed the division to set up a training course at Cole Park, in what used to be the zoo. The course, funded through private contributions, was built about three years ago.

Neither the patrolmen nor the dogs treat the workouts like a game. They may be involved in a life-threatening situation in which the outcome depends on the training and reactions of the animals.

"I feel like Joll (Nicks' semi-retired police dog) has saved my life a couple times and kept me out of danger many, many times," the sergeant said.

At the training course the dogs run up ladders and down ramps, jump through barrels and windows and over walls, and play catch. But their version of catch is a little different from the type most dogs play. Instead of catching balls they catch people.

"Catch" refers to bite training. The officers, in plain clothes, put on a protective sleeve and the dogs practice biting and holding a subject. A hidden sleeve is worn underneath a shirt, so the dogs aren't aware it is being used. "We try to make it (practice) as realistic as we possibly can," Bostick said. "That's why we use the hidden sleeve and train at night."

The dogs are praised any time they get a bite, even if they happen to miss the protective sleeve. Nicks carries a few scars — mementos of some of his training sessions.

Payne said the department has about one case each month in which a dog has bitten someone."The dogs are command biters," Bostick explained. "They will bite on command, to protect us or to protect themselves.

Nicks related one experience in which he picked up two youths who had been smoking marijuana. "I placed one boy on the hood of my car and told him to stay there. I went to get the second person and when I did the first guy came up behind me

(See CANINES, page 10E)

In photo above, patrolman Steve Smith holds his snarling long-haired German shepherd, Edu. Patrolman Lonnie Payne, left, runs Rowdy through the K-9 Division's training course at Cole Park. Below, Sergeant Ed Nicks gives his canine, Casey, a break from patrolling the streets by taking him out for an ice cream cone. Casey is fondly referred to as The Duck because of his habit of playing in the water between drills on the training course, upper right photo. Lower right, patrolman Pat Bostick practices bite training will Joll, the division's semi-retired police dog.

Janie Louise Houghton

Susan Lea Dakil

HOUGHTON-LITZLER

Janie Louise Houghton of Dallas and James Wendell Litzler of Waco will be married at 7 p.m. Nov. 27 at First Baptist Church Chapel in Midland. Parents of the bride-elect are Mr. and Mrs. W.E. Houghton of Midland. Her fiance is the son of Mr. and Mrs. Milton B. Litzler of Point Comfort.

Miss Houghton is a graduate of the Baylor University School of Nursing. She is employed with Baylor University Medical Center. Litzler is a graduate of Baylor University School of Business and is scheduled to graduate in November from Baylor Law School. He will be employed by Miller, Hiersche and Martens of Addison after graduation.

DAKIL-ROWLAND

Susan Lea Dakil, daughter of Mr. and Mrs. Camal C. Dakil of Midland, and Kyle Stephenson Rowland of Lubbock will be married at 7:30 p.m. Jan. 8 at St. Luke's United Methodist Church in Midland. The future bridegroom is the son of Mr. and Mrs. Rex. D. Rowland and Mr. and Mrs. Roger L. Stephenson, all of Midland.

The bride-elect is a graduate of Texas Tech University with a degree in Business Administration. She is employed with Roy. E. Kimsey Jr., independent oil operator. Her fiance is a candidate for May graduation from Texas Tech University. He is a member of the Texas Tech golf team.

KIRKPATRICK-SHAW

KEARNEY, Neb. — Mr. and Mrs. Jon Kirkpatrick of Kearney, Neb., announce the engagement of their daughter, Shannon, to James Clark Shaw, son of Mr. and Mrs. James H. Shaw of Midland.

The couple will be married Jan. 8 in St. David's Episcopal Church in Austin.

Both attend Southwestern University at Georgetown. After an extended trip to Europe, the couple will live in Emporia, Kan., where Shaw will attend graduate school at Empria State University.

GRAWUNDER-STANFORD

Geniese Renee Grawunder of Midland, daughter of Mr. and Mrs. Leroy Grawunder of Shallowater, will become the bride of James Mace Stanford of Denver, Colo., son of Mr. and Mrs. A.L. Stanford, at 2 p.m. Nov. 27 at Glass Memorial Chapel, First Methodist Church in Midland.

Miss Grawunder is a graduate of Texas Tech University and is employed with IBM in Midland. Her fiance graduated from Louisiana State University and is employed with DBA Systems in Denver.

PURKEY-EUDALY

OREGON, Ohio — Mr. and Mrs. Wallace Purkey Sr. of Oregon, Ohio, announce the engagement of their daughter, Amber Jean Purkey of Fort Worth, to Nathan Hoyt Eudaly Jr., also of Fort Worth. He is the son of Dr. and Mrs. Nathan Hoyt Eudaly Sr. of Midland.

Wedding is to be 2 p.m. Nov. 27 at Bethel Temple in Fort Worth.

The bride-elect is a graduate of North Texas State and a member of the National Honor Society. She is employed by Bethel Temple.

Her fiance is a graduate of Baylor University and the University of Texas in Arlington. He is a member of Alpha Epsilon Chi, American Field Service, Rotary Club, The Fort Worth Club, Van Cliburn Council and president of the Fort Worth Civic Orchestra Association. He is employed by Medcon Inc.

BECCUE-MINSHEW

Sandra Lou Beccue of Midland and James Thomas Minshew of Odessa will be married at 7:30 p.m. on Nov. 25 at Grace Lutheran Church in Midland.

The bride-elect is the daughter of Mr. and Mrs. Harry A. Beccue of Altamont, Ill. Parents of the future bridegroom are Mr. and Mrs. James D. Minshew of Odessa.

Miss Beccue is a graduate of Eastern Illinois University and is employed with Pogo Producing Company. Her fiance is a graduate of Odessa College and The University of Texas of the Permian Basin. He is employed wih Continental Emsco.

ELIZONDO-BOYER

Mr. and Mrs. Rudy R. Elizondo, 4700 Graceland, announce the engagement of their daughter, Jo Beth Elizondo of Abilene, to James Milton Boyer of Abilene. He is the son of Mr. and Mrs. Harold Boyer of Gulfport, Miss.

Wedding is set for 7:30 p.m. Dec. 18 at Wilshire Park Baptist Church.

The bride-elect is attending Hardin Simmons University in Abilene. She is a member of Phi Phi Phi Social Club and Tri Beta Biological Honor Society. She is employed by Chaparral Airlines Inc.

Her fiance is also attending HSU and is a member of Alpha Phi Omega Service Fraternity. He is employed by Jack Belshy Enterprises.

Children abused

HUNTINGTON BEACH, Calif. (AP) — The Albert Sitton Home offers a full range of services to help abused children placed there on a temporary basis. Children in the home have been placed in the protective custody of the courts following an investigation of abuse charges.

The American Humane Association estimates 170,000 children are reported abused or neglected in this country each year.

FIRE SAFETY AT COLLEGES - A VARYING DEGREE

Universities and colleges offer a variety of degrees, but fire safety protection at these institutions is provided with even greater "degrees" of variance.

A random survey of schools in the Ivy League, Big Ten and Pacific Ten conferences by Jameson Home Products, a major manufacturer of home safety products, disclosed that there was little consistency and minimal in-room protection for students living in residence halls.

Only 30 percent of the colleges contacted provide smoke alarms in all dormitory/residence hall rooms.

College students should consider bringing their own smoke alarm this fall to ensure their rooms are people protected, not just property protected. This will give a guaranteed "degree" of fire protection.

Mrs. William Daniel Chernesky

MALONE-STOKES

TEMPLE — Janet Ruth Malone and Kenneth Charles Stokes, both of Dallas, were married 7 p.m. Saturday at First Baptist Church. The Rev. Edwin Stewart officiated.

Parents of the couple are Mr. and Mrs. Truett C. Malone of Temple and Mr. and Mrs. Melvin Meissner and the late Charles Stokes of Midland.

Rita Schiller of Temple was maid of honor. Bridesmaids were Mrs. Richard Herod of Dallas and Robin Stokes of Midland, sister of the bridegroom. Stephanie Anne Herod of Dallas was flower girl.

Bobby Hollingsworth of Garland acted as best man. Ushers included Clifton Davis of Dallas and Troy Hartwick of Garland. Groomsmen were Jerry Johnson of Quinlin and David Malone of Temple, brother of the bride.

After a wedding trip to Arkansas the couple will reside in Dallas.

The bride, a graduate of Universal Real Estate College of Dallas, is employed by Century 21 in Dallas. Her husband, a graduate of United Electronic Institute of Dallas, is an electronic technician in Garland.

BAILEY-STACY

Elizabeth Su Bailey, daughter of Mr. and Mrs. Ray Bailey of Midland, became the bride of James Monroe Stacy, son of June Weatherby and Joe Weatherby, both of Midland, at 4 p.m. Saturday at Crestview Baptist Church. The Rev. James Aldridge officiated the ceremony.

Maid of honor was Robin Bailey of San Angelo, sister of the bride. Bridesmaids were Kelly Gruetter and Kim Gruetter, both of Powder Springs, Ga. Connie Simmons of Marble Falls was bridesmatron. Flower girl was Christa Simmons of Marble Falls

Terry Urban of Midland was best man. Ushers were Pat Stevenson of Odessa, and Jack Campbell of Midland. Groomsmen were Ronny Lawing of Ruidoso, N.M., Bobby Stacy of Andrews, brother of the bridegroom, and Terry Gowdy of Elk City, Okla. Ring bearer was Danny Brock of Odessa.

Following a wedding trip to San Antonio, the couple will live in Midland.

LEONARD-WICKERSHAM

Gina Susanne Leonard and Kelly Lee Wickersham, both of Midland, were married 1 p.m. Saturday at Wilshire Park Baptist Church. The Rev. Roy Roach officiated.

Parents of the couple are R.J. Leonard, 4303 Andrews Highway, and Sandra Wickersham, 3404 Tanner.

Tree Burrow was maid of honor. Julie Leonard acted as bridesmaid and Joni Thomas as flower girl. All are of Midland.

Best man was Darrell Hicks, while Rodney Wickersham was groomsman. Ushers included Don Chadick and Jerroul McMellon. Jimmy Thomas served as ring bearer. All are of Midland.

The couple will reside in Denver, Colo.

MINIHAN-CHERNESKY

Sherri Marie Minihan of Midland became the bride of William Daniel Chernesky of Winnipeg, Manitoba, Canada, at 4 p.m. Saturday at St. Ann's Catholic Church in Midland. Abbot David Geraets, OSB, of the Pecos Benedictine Monastery in Pecos, N.M., officiated the ceremony.

Parents of the bride are Mr. and Mrs. Tom R. Minihan of Midland. The bridegroom is the son of Mr. and Mrs. John Chernesky of Penticton, British Columbia, Canada.

Jana Rich of Andrews, sister of the bride, was matron of honor. Flower girl was Christina Farrar of Tulsa, Okla.

Terry Chernesky served his brother as best man. Ushers were Tommy Minihan of Midland, brother of the bride, and John Rich of Andrews. David Minihan of Midland, brother of the bride, was ring bearer.

Mr. and Mrs. Chernesky traveled from Canada to attend the wedding of their son. Also attending from out of town were Mr. and Mrs. Ray Farrar, grandparents of the bride. Approximately 65 out of town guests attended the wedding.

The bride is a graduate of Texas Tech University, with a major in Dance. Since graduation, she has been living at the Pecos Benedictine Monastery in Pecos, N.M. Her husband is self-employed as a hairdresser in Winnipeg, Canada. For the past few months he has been living at the Pecos Benedictine Monastery.

Following a wedding trip to San Antonio, the couple will live in Canada.

Crabs make great pets

By THERESA HUMPHREY
AP Writer

REHOBOTH BEACH, Del. (AP) — Need that perfect gift for someone who has everything? Try a hermit crab — on a leash, no less.

They're not much fuss — and they can make the perfect pet.

They can live in terrariums or any glass container with sand or dirt in the bottom. They drink a little tap water. They eat just about anything, such as hamburger and peanut butter, but they prefer a mixture of wheat germ, corn meal and bread crumbs.

They don't talk back.

If you name them, however, experts swear they'll come when they're called. Standard names are "Hermie" and "Herman."

But they move fast when they're on the loose. And once you catch them, be careful how you handle them because they can pinch.

The leash helps owners keep track of their pets, according to Patty Derrick.

Mrs. Derrick, her husband, Tom, and their three children sell the hermit crabs on leashes in their two seashell shops at this Delaware resort.

They're known as the "hermit crab people."

"When people first see this, they think it's dumb to need a leash, but if the crabs get away, they're pretty hard to catch without them (leashes)," said Mrs. Derrick, who was raised in the seashell business.

"My parents started selling them in Ocean City (Md.) in the 1960s," she said. "My father invented the idea of the leash."

Although many shops sell hermit crabs, Mrs. Derrick said her family's shops are the only ones known to sell leashes for the little critters.

Mrs. Derrick said the leash was her father's idea in the late 1960s. In addition to the two shops in Rehoboth, the family owns a sea shell shop in Nags Head, N.C., and Fort Lauderdale, Fla. Her sister, Debbie Adams, who runs the North Carolina shop, is applying for a patent on the leashes.

The leashes — thin chains with a loop on the end — are glued to the tops of the brightly colored shells, so as the crabs outgrow their shells, the leashes can be removed and glued to a larger shell.

"They're not a big moneymaker," Mrs. Derrick said. "But the kids like them and it draws their parents into the shop."

The hermit crabs seem to be most popular with children, grandparents and business executives.

Janie Louise Houghton

Susan Lea Dakil

HOUGHTON-LITZLER

Janie Louise Houghton of Dallas and James Wendell Litzler of Waco will be married at 7 p.m. Nov. 27 at First Baptist Church Chapel in Midland. Parents of the bride-elect are Mr. and Mrs. W.E. Houghton of Midland. Her fiance is the son of Mr. and Mrs. Milton B. Litzler of Point Comfort.

Miss Houghton is a graduate of the Baylor University School of Nursing. She is employed with Baylor University Medical Center. Litzler is a graduate of Baylor University School of Business and is scheduled to graduate in November from Baylor Law School. He will be employed by Miller, Hiersche and Martens of Addison after graduation.

Wedding is to be 2 p.m. Nov. 27 at Bethel Temple in Fort Worth.

The bride-elect is a graduate of North Texas State and a member of the National Honor Society. She is employed by Bethel Temple.

Her fiance is a graduate of Baylor University and the University of Texas in Arlington. He is a member of Alpha Epsilon Chi, American Field Service, Rotary Club, The Fort Worth Club, Van Cliburn Council and president of the Fort Worth Civic Orchestra Association. He is employed by Medcon Inc.

DAKIL-ROWLAND

Susan Lea Dakil, daughter of Mr. and Mrs. Camal C. Dakil of Midland, and Kyle Stephenson Rowland of Lubbock will be married at 7:30 p.m. Jan. 8 at St. Luke's United Methodist Church in Midland. The future bridegroom is the son of Mr. and Mrs. Rex. D. Rowland and Mr. and Mrs. Roger L. Stephenson, all of Midland.

The bride-elect is a graduate of Texas Tech University with a degree in Business Administration. She is employed with Roy. E. Kimsey Jr., independent oil operator. Her fiance is a candidate for May graduation from Texas Tech University. He is a member of the Texas Tech golf team.

KIRKPATRICK-SHAW

KEARNEY, Neb. — Mr. and Mrs. Jon Kirkpatrick of Kearney, Neb., announce the engagement of their daughter, Shannon, to James Clark Shaw, son of Mr. and Mrs. James H. Shaw of Midland.

The couple will be married Jan. 8 in St. David's Episcopal Church in Austin.

Both attend Southwestern University at Georgetown. After an extended trip to Europe, the couple will live in Emporia, Kan., where Shaw will attend graduate school at Empria State University.

GRAWUNDER-STANFORD

Geniese Renee Grawunder of Midland, daughter of Mr. and Mrs. Leroy Grawunder of Shallowater, will become the bride of James Mace Stanford of Denver, Colo., son of Mr. and Mrs. A.L. Stanford, at 2 p.m. Nov. 27 at Glass Memorial Chapel, First Methodist Church in Midland.

Miss Grawunder is a graduate of Texas Tech University and is employed with IBM in Midland. Her fiance graduated from Louisiana State University and is employed with DBA Systems in Denver.

PURKEY-EUDALY

OREGON, Ohio — Mr. and Mrs. Wallace Purkey Sr. of Oregon, Ohio, announce the engagement of their daughter, Amber Jean Purkey of Fort Worth, to Nathan Hoyt Eudaly Jr., also of Fort Worth. He is the son of Dr. and Mrs. Nathan Hoyt Eudaly Sr. of Midland.

BECCUE-MINSHEW

Sandra Lou Beccue of Midland and James Thomas Minshew of Odessa will be married at 7:30 p.m. on Nov. 25 at Grace Lutheran Church in Midland.

The bride-elect is the daughter of Mr. and Mrs. Harry A. Beccue of Altamont, Ill. Parents of the future bridegroom are Mr. and Mrs. James D. Minshew of Odessa.

Miss Beccue is a graduate of Eastern Illinois University and is employed with Pogo Producing Company. Her fiance is a graduate of Odessa College and The University of Texas of the Permian Basin. He is employed wih Continental Emsco.

ELIZONDO-BOYER

Mr. and Mrs. Rudy R. Elizondo, 4700 Graceland, announce the engagement of their daughter, Jo Beth Elizondo of Abilene, to James Milton Boyer of Abilene. He is the son of Mr. and Mrs. Harold Boyer of Gulfport, Miss.

Wedding is set for 7:30 p.m. Dec. 18 at Wilshire Park Baptist Church.

The bride-elect is attending Hardin Simmons University in Abilene. She is a member of Phi Phi Phi Social Club and Tri Beta Biological Honor Society. She is employed by Chaparral Airlines Inc.

Her fiance is also attending HSU and is a member of Alpha Phi Omega Service Fraternity. He is employed by Jack Belshy Enterprises.

Children abused

HUNTINGTON BEACH, Calif. (AP) — The Albert Sitton Home offers a full range of services to help abused children placed there on a temporary basis. Children in the home have been placed in the protective custody of the courts following an investigation of abuse charges.

The American Humane Association estimates 170,000 children are reported abused or neglected in this country each year.

FIRE SAFETY AT COLLEGES - A VARYING DEGREE

Universities and colleges offer a variety of degrees, but fire safety protection at these institutions is provided with even greater "degrees" of variance.

A random survey of schools in the Ivy League, Big Ten and Pacific Ten conferences by Jameson Home Products, a major manufacturer of home safety products, disclosed that there was little consistency and minimal in-room protection for students living in residence halls.

Only 30 percent of the colleges contacted provide smoke alarms in all dormitory/residence hall rooms.

College students should consider bringing their own smoke alarm this fall to ensure their rooms are people protected, not just property protected. This will give a guaranteed "degree" of fire protection.

You Know, First Impressions Count!

BALLOONS -N- THINGS is celebrating our first year in business and we would like to take time to thank everone for making our first year a very successful one. Weddings

Mrs. Kenneth Charles Stokes

Mrs. James Monroe Stacy

Mrs. Kelly Lee Wickersham

Mrs. William Daniel Chernesky

MALONE-STOKES

TEMPLE — Janet Ruth Malone and Kenneth Charles Stokes, both of Dallas, were married 7 p.m. Saturday at First Baptist Church. The Rev. Edwin Stewart officiated.

Parents of the couple are Mr. and Mrs. Truett C. Malone of Temple and Mr. and Mrs. Melvin Meissner and the late Charles Stokes of Midland.

Rita Schiller of Temple was maid of honor. Bridesmaids were Mrs. Richard Herod of Dallas and Robin Stokes of Midland, sister of the bridegroom. Stephanie Anne Herod of Dallas was flower girl.

Bobby Hollingsworth of Garland acted as best man. Ushers included Clifton Davis of Dallas and Troy Hartwick of Garland. Groomsmen were Jerry Johnson of Quinlin and David Malone of Temple, brother of the bride.

After a wedding trip to Arkansas the couple will reside in Dallas.

The bride, a graduate of Universal Real Estate College of Dallas, is employed by Century 21 in Dallas. Her husband, a graduate of United Electronic Institute of Dallas, is an electronic technician in Garland.

BAILEY-STACY

Elizabeth Su Bailey, daughter of Mr. and Mrs. Ray Bailey of Midland, became the bride of James Monroe Stacy, son of June Weatherby and Joe Weatherby, both of Midland, at 4 p.m. Saturday at Crestview Baptist Church. The Rev. James Aldridge officiated the ceremony.

Maid of honor was Robin Bailey of San Angelo, sister of the bride. Bridesmaids were Kelly Gruetter and Kim Gruetter, both of Powder Springs, Ga. Connie Simmons of Marble Falls was bridesmatron. Flower girl was Christa Simmons of Marble Falls

Terry Urban of Midland was best man. Ushers were Pat Stevenson of Odessa, and Jack Campbell of Midland. Groomsmen were Ronny Lawing of Ruidoso, N.M., Bobby Stacy of Andrews, brother of the bridegroom, and Terry Gowdy of Elk City, Okla. Ring bearer was Danny Brock of Odessa.

Following a wedding trip to San Antonio, the couple will live in Midland.

LEONARD-WICKERSHAM

Gina Susanne Leonard and Kelly Lee Wickersham, both of Midland, were married 1 p.m. Saturday at Wilshire Park Baptist Church. The Rev. Roy Roach officiated.

Parents of the couple are R.J. Leonard, 4303 Andrews Highway, and Sandra Wickersham, 3404 Tanner.

Tree Burrow was maid of honor. Julie Leonard acted as bridesmaid and Joni Thomas as flower girl. All are of Midland.

Best man was Darrell Hicks, while Rodney Wickersham was groomsman. Ushers included Don Chadick and Jerroul McMellon. Jimmy Thomas served as ring bearer. All are of Midland.

The couple will reside in Denver, Colo.

MINIHAN-CHERNESKY

Sherri Marie Minihan of Midland became the bride of William Daniel Chernesky of Winnipeg, Manitoba, Canada, at 4 p.m. Saturday at St. Ann's Catholic Church in Midland. Abbot David Geraets, OSB, of the Pecos Benedictine Monastery in Pecos, N.M., officiated the ceremony.

Parents of the bride are Mr. and Mrs. Tom R. Minihan of Midland. The bridegroom is the son of Mr. and Mrs. John Chernesky of Penticton, British Columbia, Canada.

Jana Rich of Andrews, sister of the bride, was matron of honor. Flower girl was Christina Farrar of Tulsa, Okla.

Terry Chernesky served his brother as best man. Ushers were Tommy Minihan of Midland, brother of the bride, and John Rich of Andrews. David Minihan of Midland, brother of the bride, was ring bearer.

Mr. and Mrs. Chernesky traveled from Canada to attend the wedding of their son. Also attending from out of town were Mr. and Mrs. Ray Farrar, grandparents of the bride. Approximately 65 out of town guests attended the wedding.

The bride is a graduate of Texas Tech University, with a major in Dance. Since graduation, she has been living at the Pecos Benedictine Monastery in Pecos, N.M. Her husband is self-employed as a hairdresser in Winnipeg, Canada. For the past few months he has been living at the Pecos Benedictine Monastery.

Following a wedding trip to San Antonio, the couple will live in Canada.

Crabs make great pets

By THERESA HUMPHREY
AP Writer

REHOBOTH BEACH, Del. (AP) — Need that perfect gift for someone who has everything? Try a hermit crab — on a leash, no less.

They're not much fuss — and they can make the perfect pet.

They can live in terrariums or any glass container with sand or dirt in the bottom. They drink a little tap water. They eat just about anything, such as hamburger and peanut butter, but they prefer a mixture of wheat germ, corn meal and bread crumbs.

They don't talk back.

If you name them, however, experts swear they'll come when they're called. Standard names are "Hermie" and "Herman."

But they move fast when they're on the loose. And once you catch them, be careful how you handle them because they can pinch.

The leash helps owners keep track of their pets, according to Patty Derrick.

Mrs. Derrick, her husband, Tom, and their three children sell the hermit crabs on leashes in their two seashell shops at this Delaware resort.

They're known as the "hermit crab people."

"When people first see this, they think it's dumb to need a leash, but if the crabs get away, they're pretty hard to catch without them (leashes)," said Mrs. Derrick, who was raised in the seashell business.

"My parents started selling them in Ocean City (Md.) in the 1960s," she said. "My father invented the idea of the leash."

Although many shops sell hermit crabs, Mrs. Derrick said her family's shops are the only ones known to sell leashes for the little critters.

Mrs. Derrick said the leash was her father's idea in the late 1960s. In addition to the two shops in Rehoboth, the family owns a sea shell shop in Nags Head, N.C., and Fort Lauderdale, Fla. Her sister, Debbie Adams, who runs the North Carolina shop, is applying for a patent on the leashes.

The leashes — thin chains with a loop on the end — are glued to the tops of the brightly colored shells, so as the crabs outgrow their shells, the leashes can be removed and glued to a larger shell.

"They're not a big moneymaker," Mrs. Derrick said. "But the kids like them and it draws their parents into the shop."

The hermit crabs seem to be most popular with children, grandparents and business executives.

Mrs. Rickey Dean Campbell

Mrs. Craig Allen Graves

SLEDGE-CAMPBELL

Patrice Darcell Sledge, 1604 N. Edwards, and Rickey Dean Campbell, 1905 N. Tyler, were married Oct. 9 at Alexender Temple C.O.G.I.C. The Rev. C.S. Johnson officiated.

The bride is the daughter of Mrs. Charlie Vera Blake of Midland. Mr. and Mrs. Roosevelt Campbell, 1412 E. Parker, are parents of the bridegroom.

Deborah King was maid of honor. Bridesmaids were Allison Campbell, Rosa Washington, Edna Johnson, Becky Taylor,and Deidra and Angela Swindell. All are of Midland. Cheryl Washington was flower girl.

Steven Campbell was best man. Groomsmen were Dennis Campbell, Frank Blaylock, Phillip Smith, Calvin Hawkins and James Chambers. Jason Anderson was ring bearer; while Derrick Roberts and Horace Bascus acted as ushers. All are of Midland.

Following a wedding trip to Dallas, the couple will live in Midland.

DAHLEN-HILLMAN

Heather Dawn Dahlen and Hugh Ellis Hillman Jr., both of Midland, were married 4 p.m. Saturday at Westside Church of Christ. The Rev. Donald A. Mitchell officiated.

Parents of the bride are Merna J. May of Midland and Gerald L. Dahlen of Inkster, Mich. The bridegroom is the son of Faye G. McKey of Brookhaven, Miss.

Deborah Corey of Midland, sister of the bride, was matron of honor, and another sister, Trisha Dahlen of Midland, served as bridesmaid. Flower girl was Amanda Case.

Best man was Martin Hillman, brother of the groom, of Brookhaven. Johnny Bang of Houston was groomsman. Ushers were Fred Corey and Jay Stone, both of Midland.

The bride is employed by Western Oil Transporation Co. and the bridegroom by The Rutherford Co. in Odessa.

PIERCE-GRAVES

STANTON — First Baptist Church in Stanton was the setting for the Saturday wedding of Laurabeth Pierce and Craig Allen Graves, both of Stanton. The Rev. Ed Carson officiated the 7 p.m. ceremony.

Parents of the couple are Mr. and Mrs. Charles R. Pierce of Euless and formerly of Stanton, and Mr. and Mrs. Granville W. Graves of Stanton.

Teresa Smith of Hobbs, N.M., was matron of honor. Bridesmaids were Stella Pierce of Keller, sister of the bride, and Leigh Ann Graves of Stanton, sister of the bridegroom. Junior bridesmaid was Shana Bishop of Stanton. Flower girl was Jessica Smith of Midland.

Granville Graves served his son as best man. Ushers were Mike Smith of Midland and Buddy Roberts of Stanton. Groomsmen were Mike Swinson and Larry Carroll, both of Stanton. Michael Swanson of Midland was ring bearer.

Following a wedding trip to Cancun, Mexico, the couple will live in Stanton.

Couple celebrates 25th anniversary

A team roping and barbecue was held in honor of the 25th anniversary of Mr. and Mrs. C. Rayford Calhoun. The event took place Saturday at the home of Mr. and Mrs. Scott Welch on South Midkiff Road.

The celebration was hosted by the couple's children, Vicky Welch, Christi Calhoun, both of Midland, and Rainy Calhoun of Stephenville.

Mr. and Mrs. Calhoun were married Oct. 19, 1957. They have three daughters and three grandchildren.

Woman dedicated to study of rape

By ELAINE WOO
Hearst Feature Service

LOS ANGELES — Diana Russell has done little since 1971 but investigate the nature and causes of violence against women — which is to say, she's been extremely busy.

Before rape became fashionable as a feminist issue, she led a demonstration outside a San Francisco courthouse to protest the court's sexist treatment of a rape victim. That led to a book about rape written from the perspective of 22 victims.

Then she organized a tribunal on "crimes against women" that was held in Brussels and drew 2,000 participants from 40 countries. Later she helped found the first feminist organization against pornography, Women Against Violence in Pornography and Media (WAVPM), which encouraged the formation of similar groups in major cities cross the country.

Not surprisingly, hearing about assaults on women used to drive her into a dark depression — the way that classes Russell teaches on "The Sociology of Oppression" and "Violence Against Women" still make many of her students feel at all-female Mills College in Oakland, Calif.

These days, however, the sociology professor and committed feminist reacts differently: "Doing this work is a way of providing ammunition in the struggle against these problems," she said, even though it's apparent the fight continues to be uphill.

RUSSELL, THE author of two previous books about violence against women, has come even closer to the home in her newest book about husbands who rape their wives. "Rape in Marriage" documents the experiences of 87 women who were sexually assaulted by their mates. Funded by the National Institute of Mental Health, the report is based on a random survey of 930 women living in the San Francisco area in 1977. It represents the first comprehensive study of the subject ever done.

Russell found that 14 percent of the women interviewed for her project had been raped by their spouses, a statistic she firmly believes must be regarded as an underestimate at best, "because some of the women even admitted that they weren't willing to talk about being raped."

The traditional definition of rape says that rape occurs when intercourse has been forced, performed because of the threat of force or because the woman is physically unable to consent. But these guidelines fail to take into account what Russell perceives as the grayer areas of marital rape — situations in which a woman may not desire sex but consents to it because she feels it is her duty as a wife.

Russell, born in South Africa and educated at the University of Cape Town, London School of Economics and Harvard University, blames blames patriarchal attitudes for reinforcing the idea of wives as the sexual property of husbands.

"We do carry around a notion that wives should do what their husbands say — the book brings that out partly," she said. "But I hope it will help develop a redefinition of conjugal rights. It's not the right of the husband to have sex whenever he wants with his wife, but the right of the wife to say no."

ONE STARTLING aspect of the testimony offered in "Rape in Marriage" is the refusal of many of the raped wives even to use the word rape to describe obviously forced encounters, or to hear them either defend their husbands or blame themselves.

Observed Russell: "There are other kinds of coercion, like economical or the threat of physical harm. I'm trying to undermine the notion that women have to 'put out' regardless of what they want — that that's part of their marital duty."

Russell has found that "traditional" women — whose primary identification was as wife and homemaker and who had no outside source of income – were no more vulnerable to being raped by their husbands than more independent women. They were, however, far less likely to leave the marriage after being raped.

"That is an important finding," the sociologist remarked, "because it does show that it is primarily an economic factor that keeps them there."

Despite improvements on the legal front, rape in general is not abating; in fact, Russell believes the problem is increasing.

"I've looked at changes in the rape rate over time and at different cohorts of women. The younger the age group of women, the higher the rate of rape is. It's shocking to find that consciousness may help deal with the experience of victimization, but that it's certainly not preventing rape."

Once regarded as little more than a contradiction in terms, rape in marriage now has begun to be regarded as a legitimate social problem, and that, Russell believes, is one measure of progress.

The fashions of Bob Mackie, famous designer for television and movies and four-time Emmy winner for design, will be presented Monday at Julian Gold, beginning at 9 a.m. Mackie, known for his designs for such stars as Carol Burnett and Cher, has created a ready-to-wear line with an emphasis on late afternoon and evening wear that can be enjoyed by the American woman. Above is a casual yet elegant design for relaxing evenings. Below is a strapless, knee-length dress for evenings on the town.

Julian Gold will present fashions of Bob Mackie

Julian Gold will present a fashion show of the designs of Bob Mackie on Oct. 18 beginning at 9 a.m. Five models will show the complete line of Bob Mackie fashions at the show.

Bob Mackie, winner of four Emmy Awards and three Academy Award nominations for costume design, has now turned his talents to his first complete collection of ready-to-wear. His collection for Holiday 1982 includes daytime wear with a heavy emphasis on late afternoon through evening clothes. For Mackie, who has always wanted to design a ready-to-wear collection, this is a dream come true.

Ever since his designing talents were first unveiled, Mackie has been in constant demand. His ingenuity and instinct for glamour have made him a superstar among Hollywood designers, and his client list reads like a Who's Who of the most beautiful and glamorously dressed women. Even though Mackie's designs for the American woman have been limited in the past, the public response to the designer is so overwhelming that in July of this year, Mackie was voted the "Most Creative Fashion Designer" in America by the readers of US Magazine.

A native Californian, Mackie received his training at the Chouinard Art Institute in Los Angeles, and began his career in costume design as a sketch artist for Jean Louis. After working on several films with Louis, Mackie went to work for Edith Head at Paramont. In a very short time, he had been expposed to the talents and know-how of both Louis and Miss Head, two of the most important costume designers at that time.

In 1963 Ray Aghayan selected Mackie as his assistant on the Judy Garland television show. Soon, Mackie was hired to design a Bell Telephone Hour.

Based on the clothes he had designed for one of Mitzi Gaynor's nightclub acts, Joe Hamilton hired him to design the entire wardrobe for the first "Carol Burnett Show." He was the show's costume designer for the 11 years the show remained on the air.

Mackie's name soom became synonymous with television costume design. Then, in 1971, "The Sonny & Cher Comedy Hour" debuted, and Mackie's designs for Cher created a sensation.

Mackie is the only designer to have won four Emmy Awards and has been nominated for 10 more. In addition, he received the Costume Designers Guild Award in 1967 and 1968.

Although he has done most of his work in television, Mackie has also been involved in films and the theatre. He has designed clothes for the films, "Pennies From Heaven," for which he received an Academy Award nomination; "Divorce, American Style"; and with Ray Aghayan, designed Diana Ross' costumes in "Lady Sings the Blues," and "Funny Lady," starring Barbra Streisand and James Caan.

Reservations can be made by calling Julian Gold, 682-5368. This is a premiere showing in Texas.

Above, this stunning evening creation, designed by Bob Mackie, features a high neckline and plunging back. Its simple yet elegant lines make it perfect for elegant evenings at the theatre or symphony...for any of those special social occasions when a woman wants to look her finest.

Barbie Lively

Title of Miss Texas Teen awarded to Odessa girl

In a recent pageant held in Houston, Barbie Lively was crowned Miss Texas Teen. Miss Lively will go to Orlando, Fla., in December to compete with 52 other teenagers for the title of Miss America Teen.

Miss Lively, a former student at Trinity School in Midland, is a sophomore at Permian High School. She won the Citizenship and Community Service Award in addition to becoming Miss Texas Teen.

Miss Lively is the daughter of Suzanne Lively Richard of Alexandria, Egypt, and resides with her grandparents, Mr. and Mrs. Del F. Baucum in Odessa.

Doctor leads battle against diabetes

By CAROLINE DREWES
Hearst Feature Service

SAN FRANCISCO — The sound of this man's voice can bring tears of relief and reassurance to the eyes. "I think of you as God," one woman told Dr. Peter Forsham at a dinner given in his honor a few months ago. It was only a mild exaggeration. She said he had saved her husband's life.

Anyone whose years have been shadowed by diabetes will know what she meant.

An internist, endocrinologist, researcher and teacher who has been in the forefront of the battle against the disease, Forsham extends his support and empathy to encompass his patients' families as well. He is a quencher of panic, a dispenser of hope and confidence, a lifter of the spirit. He is also a world-renowned authority on the complicated, once-fatal disease that afflicts 10 million people in this country.

Forsham has been a diabetic himself for 57 of his 66 years, living testimony that those suffering from diabetes need not develop severe complications. He became a diabetic at nine, only two years after insulin was commercially available.

"It takes two things to cause diabetes — an inherited tendency and an external event," he says. "In my case, the external event was very dramatic."

He describes the beginning of a family vacation interrupted by nightfall and a holdup in the Black Forest of Germany. "I had fallen asleep in the back seat of the car; suddenly I woke up. A man with a huge butcher knife gleaming in the moonlight was saying, 'If you make a noise, I'm going to cut your throat, you little pig.' Well, I didn't like this. I cried for three days after it happened. You see, I was having a nervous breakdown."

Soon after the robbery, Forsham developed extreme weakness and constant thirst — classic diabetes symptoms.

"You see, the one great change when you get diabetes," Forsham goes on in his matter-of-fact voice, "is that your internal environment is no longer constant, because as your blood sugar goes up and down, it gives you an inconstancy."

Forsham is solid and erect, with the glow of good health on his cheek. He speaks bluntly, with wit and humor. His voice carries the trace of an indefinable European accent; although he was born in New Orleans, he was educated abroad after his parents' divorce in his early childhood.

And so it is a little incongruous, given the vibrancy of the man, to hear Forsham muse ruefully on the slowing-down process that comes with growing older.

"Aging is a reality," says Forsham. "It takes two or three times as long to do everything. Something happens that makes the time seem shorter, and yet you procrastinate more, and as a result the Sunday paper seems to come every other day. So I'm happy to do a little less in the way of work."

Last year Forsham retired as director of the Metabolic Research Unit at the UC San Francisco School of Medicine after 30 years in that pioneering role. He makes clear that he retired because it is a policy of the university, but he continues most emphatically as professor of medicine and pediatrics at the school. And there is his outside lecture circuit and his private practice.

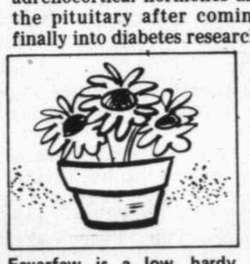
Forsham was reared in Cambridge, England, where he took a master's degree in physiology. He was at New York's Rockefeller Institute as a research fellow when World War II broke out.

"The research program vanished, but I was invited to stay on, which I did for two years until I decided I had to get a Ph.D. or an M.D. So one afternoon, I climbed on a chair in a room where we used to have tea, and I said, 'Friends, I want you to think about this question and give me an answer.' All hell broke loose; they were almost fighting with each other. Well, finally, there were four hands for the Ph.D. and 28 hands for the M.D. These people — many of them Nobel Prize winners — felt strongly that to do research you have to be an M.D."

And so Forsham went to Harvard Medical School, where he began his research career with the noted Dr. George W. Thorn, doing some of the earliest work on adrenocortical hormones and ACTH. He moved on to the pituitary after coming to San Francisco, and finally into diabetes research and treatment.

James Offield, left, president of Stepfamily Association of Texas; Emily Visher of California, center, president of Stepfamily Association of America; and John Young, executive director of Family Services of Midland and professional consultant of Stepfamily Association of the Permian Basin, are shown here at the recent First Annual Conference of Stepfamily Association of America held in YMCA of the Rockies Camp, Estes Park, Colo. Family Services of Midland is offering Stepfamily Survival Workshop, to be held on five consecutive Thursday evenings from 7 p.m. — 9 p.m. beginning Oct. 21. The workshop will be led by Young and Gail Huggins, who has been active in the local stepfamily support group. Cost of the workshop is $50 per couple. Call Family Services of Midland, 683-4241, to register or for further information.

Fairbanks, Alaska, is the closest city in North America to the Arctic Circle.



Feverfew is a low, hardy plant with white daisy-like flowers. People once believed that it could drive away fever. Its name means to put fever to flight. It doesn't work.

CLUB NEWS

TOASTMISTRESSES

Area clubs of International Toastmistress met in San Angelo for the quarterly meeting of Council I. Programs on expanding membership and communication skills were presented by Council Vice President Carol Ann Mirll of Brownfield. Members of clubs from Brownfield, Midland, Hobbs and San Angelo attended.

Coucil I will hold its next meeting in Lubbock Nov. 20 at the Woman's Club. Persons interested in Toastmistress should call 683-8261.

MIDLAND GARDEN CLUB

"Flower Show Practice" was presented to Midland Garden Club Oct. 7 by Mrs. J.W. McCart. She reviewed the schedule for the flower show Oct. 23 at 2500 Delano.

Arrangements were made for the Trinity Towers birthday party Oct. 26 and the monthly meeting of Council of Midland Garden CLub at 1711 Douglas Nov. 8. Reports of the Midland Woman's Club Flea Market Oct. 8-9 were given.

VALLEY VIEW 4-H CLUB

The Valley View 4-H Club met recently; 14 members were enrolled. New officers were installed for the 1982-83 year: Steve Sparkman, president; Kelin Jones, vice president; Wendy Cox, secretary; Debbie Hipp, council delegate; Kelie Jones, reporter.

Projects record sheets, the foods and nutrition project, a Christmas fund raising and the Awards Banquet were discussed. Programs for the year were announced.

20th CENTURY STUDY CLUB

The Texas Federation of Women's Clubs fall board meeting and workshop was recently held in Austin. The Midland 20th Century Study Club was represented by Mrs. D.L. McClurg, president; Mrs. R.J. Castor, vice president; Mrs. Vance Hendricks, Western District president; and Mrs. T.R. Cook, Western District vice president.

MU PSI CHAPTER, BETA SIGMA PHI

Mu Psi Chapter of Beta Sigma Phi met Tuesday in the home of Celina Hernandez. A program featuring fall makeup was presented by Cindy Reinhart of Pappagallo's. Discussion and plans were made for the chapter's garage sale Oct. 15-17, the Money Hat Raffle for the Harvest Ball and a model meeting in the home of Pam Hammit Oct. 12.

LT. WILLIAM BREWER CHAPTER, DAR

The Lt. Wm. Brewer Chapter of the Daughters of the American Revolution met recently at the Woman's Club.

Mrs. John Fitzgerald gave the National Defense Report from articles in The National Defender. Mrs. Paul Hiebert, fund raising chairman, reported the annual Pecan Sale would be held Nov. 18-19 in the lobby of the First National Bank.

Mrs. John Rhea, Mrs. Warren Faller, Mrs. John Cross, Mrs. William B. Neely Jr. and Mrs. Lee Park were elected nominating committee.

Mrs. George Van Husen, Col. Theunis Dey Chapter, DAR, presented "The American Flag."

PRECEPTOR EPSILON DELTA CHAPTER, BSP

The Preceptor Epsilon Delta Chapter of Beta Sigma Phi met recently in the home of Marlyn Butler. Ways and Means Chairperson Marline Byrd reported the garage sale was a success and items will be donated to the service project, Teen Challenge Home.

Plans were made for the decorations of the Harvest Ball and a salad supper to entertain Xi Phi Zeta Oct. 27. Charline Shepherd was elected the Valentine Sweetheart.

The next meeting will be in the home of Deborah Bench.

YUCCA GARDEN CLUB

Yucca Garden Club met recently in the home of Mrs. P.C. O'Quinn for the regular monthly meeting. Present were 18 members and two guests. Two new members were welcomed to the club, Mrs. James Foster and Mrs. W.S. Dill.

Mrs. Billie Gilbert, chairman of the Midland Council of Garden Clubs Flower Show, reported the date Oct. 23 for the flower show at the Midland Senior Center.

Mrs. Margaret Kennedy presented a slide program on native plants and trees of the West Texas area.

The next meeting will be Nov. 18, when the club will be hostess to the regular monthly meeting of the Midland Woman's Club. The program will be given by Mrs. Sue Kristin of Stanton, and will be entitled "Christmas Trees and Decorations."

PSI PHI CHAPTER, BSP

The Psi Phi chapter of Beta Sigma Phi met recently in the home of Barbara Adams. The program was given by Cletus, of Cletus Hair and Skin Care Center.

Following the program, a meeting was held and plans for the Harvest Ball were discussed. Another topic of interest was the possibility of "adopting a grandmother."

XI ALPHA MU CHAPTER, BSP

The Xi Alpha Mu chapter of Beta Sigma Phi met recently in the home of Virginia Earhart for its regular meeting.

Members wrapped birthday presents which were purchased for foster children as a service project. The tickets for the upcoming Harvest Dance at the VFW were distributed. Beverly Acker presented the program on "Successful Marriage."

TUESDAY PAINTERS, MIDLAND PALETTE CLUB

The Tuesday Painters of the Midland Palette Club held their first official meeting.

Jean Johnston of Odessa gave a demonstration in water color.

A.A.R.P.

The American Association of Retired Persons met in regular session recently at the Midland Senior Center, 2500 Delano.

Ron Rosignal, a volunteer worker for the American Cancer Society, gave a program.

Western Plaza Shopping Center, Near Albertson's

FABRIC SECRETS

By Betty Martin

Silk comes in a variety of blends suited to a variety of different uses. For evening wear, blouses and intimate apparel, "charmeuse" is a fine, very soft satin-faced silk crepe. It has a lustrous surface and beautiful "drape". For sports wear and daytime dresses, "noil" silk has a very sporty look. "Noil" yarn comes from the inner part of the silk cocoon. It is shredded, combed and spun much like cotton thread. The result is a very soft, slightly nubby, fabric with a cotton-like appearance. "Georgette" silk is a lightweight semi-sheer crepe fabric with a grainy surface. Its wrinkle resistance and beautiful drape makes it perfect for evening wear.

LEGGETTS FABRICS, 1541 Parkway, Odessa, 362-8255 and No.9 Plaza Shopping Center, Garfield at Wadley in Midland, 683-3101 not only carries a magnificent array of silks but every other fabric you would ever hope to find as well. Our buyers constantly scour the New York markets to make sure we are always up to date with the latest fabrics and fashions for you. We also welcome sample requests. Visa and Master charge. Open: Mon.-Sat. 10-6.

FABRIC TIP:

When in doubt, dryclean silk garments.

Solemn figures of Ramses II dwarf visitors to the temples at Abu Simbel on the shores of Lake Nasser.

Ancient figures of King Ramses II dominate new Egyptian location

By BETTY PEACH
Copley News Service

There sat Ramses II, 65 feet tall. Four stone clones (actually, 3½ — the upper torso of one lies crumbled at its feet) stare out across the placid waters of Lake Nasser.

They have survived the ravages of wind, dismantling, moving and relocation 200 feet above their original site, now drowned by waters of the Nile behind the High Dam at Aswan, 125 miles north.

When Ramses II ordered the four giant figures constructed, they were intended as much to frighten invaders from the south as to please the pharaoh's ego, as enormous as the stone figures are.

Even seated, they are startlingly large. From the base of enormous toes, the head is more than the height of a six-story building.

Everything from the original two temples was numbered and removed more than 20 years ago, and an artificial cliff constructed so that the temples' interiors look just as they did when they were finished sometime between 1304 and 1237 B.C.

The place of women in a pharaoh's life is well documented in the placement of figures of Ramses' wife, mother, and assorted children. They stand ankle high or midcalf, mixed in among his eight fat legs, either clutching him affectionately or standing dutifully at attention. They too, stare out across the lake.

A pharaoh of great bravado, Ramses II built a number of temples honoring himself and some Egyptian gods, but this outstrips them all for sheer size.

The site is impressive. The small community of Abu Simbel has an airport and little else, set out in the desert near the border between Egypt and Sudan.

It is a bleak desert, with almost nothing growing except a few scrubby acacia thorn trees. Vast expanses of sand are pockmarked by outcroppings of rough gray rock, matching the color of the narrow asphalt road between the pink stucco terminal building and the knoll where Ramses II's giant temple was reconstructed. Beside it is a slightly smaller temple, dedicated to the goddess Hathor.

Usually, temples were built at some distance apart, for the early Egyptians believed that their stone gods and goddesses liked to travel to visit each other.

But the tiny town of Abu Simbel is so isolated that adjacent temples made the required visits possible without the inconvenience of more than 100 miles by barge on the Nile.

But transportation difficulties have been largely overcome. It is a 40-minute flight from Aswan to the airstrip at Abu Simbel, and travelers arrive by the planeload all day every day.

Before air travel, visitors with a yen for carving left their names over any available space not covered by the original builders. Names in Persian, Greek and Latin mar the walls, along with some in English who thoughtfully added the dates, some as recent as 1850.

Now, Egyptian guards keep a watchful eye, and graffiti are frowned on.

But outside, three faces of the four figures of Ramses II wear a faint smile.

Twin engine jet possible in future for use in transoceanic flights

By CAROLE SHIFRIN
Los Angeles Times — Washington Post News Service

WASHINGTON — Passengers could be flying across the oceans on jet airliners with two engines, instead of with three or four, in the not-too-distant future, airline and aircraft officials say.

"With today's engine reliability, there's no reason why twin-engine aircraft can't operate transpacific and transatlantic," said O.M. "Rusty" Roetman, vice president of international sales of the Boeing Commercial Airplane Co.

Until now, the idea of twin-engine commercial aircraft on transoceanic flights hasn't been considered seriously, although twin-engine business jets make transatlantic crossings all the time. But now, Boeing and Airbus Industrie are producing new, two-engine commercial planes that are capable of making the crossings and will be able to do so at a lower cost per seat-mile than some planes they would replace.

Commercial flights by twin jets over Pacific and most Atlantic routes would require changes in international flight rules. An International Civil Aviation Organization rule limits twin-engine airplanes to routes on which they are never more than 90 minutes away — at cruising altitude — from a suitable airport.

Federal Aviation Administration regulations are even more restrictive, requiring a twin-engine plane to be no further than 60 minutes flying time — at cruising speed on one engine — from an airport.

Eastern Airlines has an exemption that lets it operate its twin-jet Airbus A300 up to 75 minutes from an airport, allowing the plane to be used on routes from New York into the Caribbean. Air Florida has a similar exemption.

Former FAA administrator Langhorne Bond said the FAA's 60-minute rule means in practice that a plane must be within about 460 miles of an airport at all times. This eliminates the shortest routes across the Atlantic, as well as twin-jet flying between the West Coast and Hawaii and routes in the north Pacific.

Citing the technical progress that has been made in engines since the FAA rules were set almost 30 years ago in the piston-engine era, Bond last month urged a re-evaluation of over-water flying by twin jets in a speech to the National Association of State Aviation Officials in New Orleans.

A spokesman for the FAA said the agency has been reviewing the background and history of the rule. "We are looking into it but have reached no conclusions," he said.

New twin jets on display last month at the Farnborough Air Show in England demonstrated their long-range capabilities. Boeing's wide-body 767 this summer broke what is believed to be a nonstop distance record for a twin-jet airliner when it flew nonstop from Oslo to Seattle, a distance of 4,994 miles, in nine hours and 50 minutes. The narrow-body Boeing 757 flew nonstop from Tokyo to Seattle, a distance of 4,914 miles, in nine hours and seven minutes...

The Airbus wide-body A310 this summer flew nonstop between Kuwait and Singapore, a distance of about 4,154 miles, in eight hours and 40 minutes.

Both Boeing planes were flown nonstop from North America to London for the Farnborough show. "There's really no reason not to," said Eastern Airlines Chairman and President Frank Borman aboard the 757 that will be Eastern's after it is approved by the FAA for commercial service. "I've got thousands of hours behind a single-engine plane," the pilot and former astronaut said.

"On a strict technical basis, we agree with Boeing," said Pierre G. Pailleret, senior vice president-marketing for Airbus. "The safety requirements are more than met.

"The two questions that remain are: 1) will the civil aviation authorities change the regulations, and 2) will Mrs. Smith go on a twin from New York to Paris?" Mrs. Smith might have balked 10 years ago, but she's already going from Paris to Dakar on a twin and will accept a transatlantic flight on a twin, he predicted.

Ritz restored to its former glory

By MICHAEL CARLTON
Los Angeles Times — Washington Post News Service

LONDON — "Children of the Ritz
Sleek and civilized
Frightfully surprised
We know just how we want our quails done
And then we go and have our nails done."

When Noel Coward wrote those lines, London's Ritz Hotel was at its pinnacle — the best known, best liked, and perhaps the best hotel in the world. The Ritz played to royalty and wealth, providing a standard of service that was extraordinary, a standard so high that the word "ritzy" became a part of the language.

Some years later — in the '60s and early '70s especially — the Ritz was no longer the charmed hotel of legendary hotelier Cesar Ritz. It was, wrote Peregrine Worsthorne, ". . . by no means unusual in the 1960s to see a mouse scuttling across the threadbare carpets. The glitter had long since faded and shabbiness set in. The place was usually empty, kept alive by memories of former glories and a clientele who preferred nostalgia to comfort."

Today, after a change in ownership and a dramatic turnaround, the Ritz has returned to its salad years and is once again one of the finest hotels in the world.

The Trafalgar House Group bought the Ritz in 1976 and has since spent several million dollars restoring the old dowager to her former beauty. At 76, today's Ritz is young again and entertaining regal suitors from throughout the world.

THIS HOTEL, built to the extreme standards of Cesar Ritz, a man whom Edward VII called "the hotelkeeper of kings and the king of hotelkeepers," is the epitome of "la belle epoque," a time of Edwardian excess, gilt and glamour.

The elegant Winter Garden, restored to its 1906 splendor, is perhaps the loveliest room in London with its extravagantly sculptured fountain of marble, its paneled mirrors of beveled glass in bronze frames, and its peach-colored glass roof. Beneath graceful palm fronds nestle groups of little gilded Louis XVI armchairs with oval backs. Tea is served here daily, a ritual that is perhaps the most civilized moment in a most civilized city.

Under the ornate gilt and glass ceiling in the pale pink and cream lounge, seated on pink velvet chairs and sofas with gold cherubs looking on, tea at the Ritz is still magical. The china is white and pale blue. Delicate fingers of white bread and butter are striped appropriately with pale pink ham, pale peach smoked salmon, cream cheese, pale green cucumber. Cakes are delectable: tiny eclairs, fresh fruit tarts, plain chocolate sauces and a huge central gateau with fresh strawberries, cream and the lightest sponge. The atmosphere is totally relaxed, conversation from the intriguing mixture of guests is quiet but not self-conscious and the service, managed by Michael Twomey, is immaculate.

DESPITE THE PRICE (nearly $11), tea at the Ritz is once again the social occasion of London and the waits (no reservations are accepted) can be as long as an hour. Still, an hour waiting in the Ritz is memorable, just for the privilege of sitting in one of the most splendid hotels in the world. Just remember to wear a jacket, men; if you do not you will not be seated.

Those who have taken tea here, and stayed here, are legion. Royalty from Edward VII to Prince Charles (who danced on top of a piano with Elton John), writers from Noel Coward and Evelyn Waugh to Graham Greene and Ian Fleming, actors from Charlie Chaplin to Tallulah Bankhead (who fell down the stairs), the rich from Paul Getty (he kept a suite here) to Jacqueline Onassis ("It's like paradise," she said), rock stars such as the Rolling Stones and artists like Andy Warhol have made the Ritz home at one time or another.

The reason so many of the rich, talented and privileged have continued to make the Ritz their base is that the hotel provides all the needed services: privacy (the hotel does not give out the names of its guests) and discreet employees.

(The gentleman, if he has been to the Ritz before, must use the same name he used the last time, as the staff has particularly good memories in this department. They will, however, turn a blind eye to the fact that you are not with the same lady.).

And there is 24-hour room service, immediate service (there is one employee for each guest even when the Ritz is full), a feeling of being attended to with style and great caring.

WHERE ELSE BUT at the Ritz do you have a hall porter (concierge) like Victor Legg, who joined the staff in 1935? He can perform miracles. Once Raymond Guest, the former ambassador to Ireland, called him and asked him to "buy me a helicopter"; on another occasion one of the American Astors rang to say "I'm dissatisfied with my tailor. Find me a tailor and he can fly over here and make me some suits." Victor always delivers.

"A hall porter," says Victor, "should know about everything from a safety pin to a battleship. It's a great challenge to the ego. You do your best and say nothing's impossible, you're going to do it." And he does.

The Ritz keeps a file on each guest who has stayed in the hotel. If you return they know what newspaper you prefer in the morning, if you want a glass of champagne or a cup of tea upon your arrival, which shops you will be visiting, the kinds of show you might want to see, what entree you prefer at the hotel's restaurant, called simply The Restaurant.

Part of the secret of the Ritz is the longevity of service of many of its employees. More than 20 have been at the Ritz for a quarter of a century.

THE STAFF has its share of characters. The eccentrics in the past have included "Mad Norman," who used to peel potatoes in the early hours of the morning wearing a copy of an Inca headdress; the "blotting paper man," who spent a large proportion of his time tearing small pieces of blotting paper into small strips which he then balanced on his nose and blew off one at a time as he stalked along the corridors; and Paddy, whose house overlooking his beloved Stamford Bridge soccer stadium was full of unopened pay checks back to 1919.

Then, of course, there is Tiger, the Ritz cat, whose diet of caviar and smoked salmon has led to the necessity of an annual slimming cure. He lives in the boiler room.

Despite (or perhaps because of) all these characters, the Ritz has entered its 76th year with more optimism than at any time since Cesar Ritz, the little Swiss hotelier, opened his London showplace which he felt should embody "the highest developments of artistic comfort in the 20th century."

THERE MAY BE a better hotel in London. There may even be a better hotel in Paris (the Ritz, perhaps?) or Madrid (the Ritz, perhaps?) or Barcelona (the Ritz, perhaps?) or even in Boston (the Ritz-Carlton, perhaps?). But there is no hotel anywhere in the world that combines the tradition, ambiance and sophistication of this little 140-room palace on Piccadilly Street.

TRAVEL

IF YOU GO:

Alas, the good things in life are not cheap. The least expensive single room with bath costs about $120 a night. Special packages, however, like a "Weekend at the Ritz" are more reasonable, costing the same for two nights. Between Dec. 24 and Jan. 3 you can stay for any two nights for about the same price and, if you like, have a special meal in The Restaurant, including champagne, for $34.

The Ritz is particularly well situated for shopping, being just around the corner from such famous stores as Fortnum and Mason (food stuffs, fashion), Dunhill (pipes and cigars) and Purdy (guns). It is just off the Green Park underground station, so transportation to any location in London is quite easy. Some fine parks surround the hotel, and Buckingham Palace is a short, lovely stroll away.

World's Most Spectacular Sights

Christian pilgrims partake of baptismal ceremonies in a picturesque setting on the River Jordan.

The picturesque stone amphitheater is in the heart of a thick grove of eucalyptus trees. The spot is a point where the River Jordan emerges from the Sea of Galilee.

This site is called *Yardenit* and it's the area where Christian pilgrims can be baptized in the Jordan, just where Jesus Christ is said to have been immersed by John the Baptist.

Yardenit has been developed by the Israel Government Tourist Corporation with the assistance of donations from other countries. A major donor has been the Calvary Chapel Services of California, which gave 20 percent of the more than $300,000 needed for the project.

Pastor Chuck Smith, founder of Calvary Chapel Services, was accorded the honor of being the first to use the new baptismal pool at the recent dedication of *Yardenit*.

A large gathering from many Christian churches in the Holy Land attended the ceremonies, along with government representatives. Many kubbutzniks from Kevutsat Kinneret, which made the land available and manages the site, were also on hand.

The new facilities include warm showers and changing rooms with special areas for the disabled. Wheelchairs may be rolled into the pools along specially built pathways.

Entry to the baptismal facilities is free and the site is open daily from 8 AM to 4:30 PM the year-round.

10 TO 15 POUNDS OVERWEIGHT?

Vacation—Condition—Nutrition in the Colorado Rockies.

Olympians have long known the virtues of conditioning their bodies at high altitudes for the cardiovascular stamina necessary for competition.

The Monarch Special Diet Plan enables you to condition, lose weight and vacation in forests that range from 9,500 to 12,000 feet above sea level.

Our high altitude location presents a unique opportunity for you to attain your physical goals in a fraction of the time you thought possible.

Decide today for a healthier you.

CNS Photo by John Farina

Visitors come to view the empty tomb of Theodoric, a 5th century Bulgarian, who tried to conquer what was then the capital of the Western Roman Empire. The tomb has been stripped of all its Byzantine treasures, and never did hold the emperor's body, but he left his mark in other churches in Ravenna which are used for worship today.

Travel agents can provide valuable service in planning various vacations

By JANET FULLWOOD
Los Angeles Times — Washington Post News Service

In a travel industry marked by high seasons, low seasons, off-peak and shoulder seasons, pinpointing the best time of year to realize savings can be a baffling proposition.

That's where your travel agent comes in. She or he is privy — as even the most adamant consumer is not — to knowledge about the seasonal dips and swings of the industry's myriad markets.

At the touch of a few buttons, the computer-equipped agent can determine what time of year the lowest (and highest) airfares to a given international destination apply. Given some time to research the specialty publications every agency keeps in stock, the same agent can tell you when it's high season — the most popular and so the most expensive time — in Rio or low season — the less popular, less expensive season — in Montreal, when that special Caribbean hideaway drops its rates in half, or when that cruise you've always wanted to take will be most affordable. Such information can save you money, and it can also bring to light some advantages of off-season travel you might not have considered before.

Seasonal ins and outs vary by distination, of course. High season in warm weather locales usually coincides with low season in destinations where winter's grip is on, and vice versa. But differentiating between seasons is a tougher job than it used to be. The trend, travel industry personnel agee, is toward expanded seasons of operation. Many summer spots that once shut their doors after Labor Day are staying open through October, and ski resorts that once locked up after Easter are banking on the appeal of mountain summers to carry business year-round.

STILL SPRING AND FALL — the months between peak summer vacation season and the winter holidays — can be the most advantageous months for travel to many parts of the world. There are three reasons: lower costs, moderate climates and thinner crowds.

Your travel agent can help you identify the advantages of off-season travel to the destination of your choice. Meanwhile, here are some seasonal tips to consider:

AIRFARES — International airfares tend to be structured along seasonal lines, with peak and off-peak fares represented in most markets. In some markets, intermediate — or "shoulder season" fares — also are applied. For example, fares to Europe are highest in summer, lowest in winter and priced somewhere in between during spring and fall. Domestic airfares, as a rule, don't follow such distinct seasonal pricing trends.

THE CARIBBEAN — Don't expect many bargains here during the winter months, when travelers from Canada and the northern United States flock to Caribbean resorts to escape the cold. Low season at many Caribbean vacation vacation destinations begin April 15 and extends through mid-November, but airline, hotel and resort rates fluctuate erratically even during this time. Each island has its own characteristics in terms of market demand. Generally, however, prices reach their annual lows during the summer, creating a double incentive from Texas travelers who want to escape extreme temperatures and save money at the same time.

MEXICO — Now is the season to bargain. Traditionally a year-round vacation destination, Mexico currently is struggling to adjust prices in the wake of devaluations that twice this year have cut the value of the peso in half. More recently, the government's takeover of the foreign currency exchange has made chaos of confusion. Hotel and resort rates have fallen drastically in recent months and can be expected to continue to dive until some sort of monetary stability is reached. December through April are high-season holiday months in Mexico and the time when reservations for transportation and accommodations are most difficult to obtain. Hotel and resort prices tend to be at their highest then, too.

HAWAII — Look for new airlines, competitive airfares and tempting package deals to lure you to Hawaii this fall. Competition among air carriers and tour operators is stiffening in this lucrative year-round market, and prices are holding and in some cases tumbling as a result.

Fall is a good season to visit Hawaii in any year, and this fall should hold some of the best bargains of the year.

EUROPE — Crisp, colorful weather, lower international airfares and thinner tourist crowds make fall an ideal time for a European vacation. Because many Europeans vacation in August, hotels and resorts experience a distinct slump in business at the summer season's end. Don't expect many breaks in the prices of first-class hotel rooms if you travel to Europe in the fall, but do expect more flexibility with reservations for accommodations and special events.

Also, expect to enjoy quicker access to museums and historical sights that are jammed with tourists in summer.

CRUISES — Cruiseships have the advantage of traveling to where the season is. Lines that keep their vessels in the same market year-round, however, generally reduce prices somewhat in the fall.

Overall cruise prices are up this year despite an overcast economy, but several new or refurbished vessels that have come into service recently have created more spaces to be filled than ever.

As a result, virtually every cruise line in the marketplace is offering fare incentives to lure passengers. These range from flat discounts on cabin rates to "fly free" offers and "free" passage for a third or fourth person sharing a cabin for two.

Shop carefully, but look for some of the year's better cruise buys in the fall.

SKIING — Look for bargains at the beginning and end of the winter. Ski conditions in the Rockies generally don't reach their prime until February, and many resorts offer slightly lower rates until then. At the end of the season, usually just after Easter, rock bottom rates apply — especially if snow conditions are good enough to permit an extra week or two of skiing.

SPECIALS — It's not too late to visit the World's Fair in Knoxville, Tenn. The historic exposition has drawn more than 5 million visitors to date, making it the most successful tourist magnet of its kind since the New York World's Fair in 1939. Improved facilities and new exhibitions added since the fair's opening in spring will be in place through its final day, Oct. 31.

As the fair draws to a close, another major attraction will open in Florida. EPCOT — Experimental Prototype Community of Tomorrow — made its debut to the public Oct. 1 at Walt Disney World in Orlando. An $800 million showplace spotlighting futuristic ideas and technologies, EPCOT is expected eventually to double attendance at the most popular vacation spot in America.

Theodoric's empty tomb tourism site

By JOHN FARINA
Copley News Service

RAVENNA, Italy — Theodoric the Great was here, the barbarian.

But where his body has gone, this one-time king of the Ostrogoths and ruler of Italy's northern regions, nobody knows. Only his tomb remains.

Theodoric and the treasures that filled what was meant to be his final resting place were looted long ago. That leaves only his mausoleum and the damaged marble sepulcher, which once held his mortal remains, to be viewed by the curious.

The domed tomb, a monolith of Istrian stone believed to have once been a repository of Byzantine art, is now a bare, austere, cracked relic, its centuries-ago glory withered by the ages, testimony to the incontrovertible fact that all is passing.

For the art of Theodoric's age — and Ravenna is famous for its early Byzantine mosaics — the visitor must look elsewhere, in still-standing, relatively intact, nearby early Christian structures.

Among them is Sant' Apollinare Nuovo, a 5th century church built at Theordoric's behest for Arian worship dedicated to Christ. It is his lasting monument to the Western world.

Theodoric murdered Odoacer in 493, proclaiming himself king of Italy, though still under theoretic loyalty to the Roman emperor in the East.

Although an Arian Christian, believing Jesus Christ was not of the same substance of God though exalted above all other creatures, Theodoric's policy in Ravenna was one of peaceful coexistence with orthodox Catholics, who believed in the Holy Trinity.

The Ostrogoth's reign was generally constructive and stable, but after he died in Ravenna in 526, the Byzantine emperor, Justinian I, re-conquered much of the West.

In the process, Theodoric's Ostrogoth kingdom faded into oblivion. But not his stripped-down tomb. And not the Christian church he built, nor the Byzantine mosaics.

Theodoric's Sant' Apollinare Nuovo represents one of the finest remaining examples of early Byzantine art, containing mosaics depicting the life of Christ, and processions of holy virgins and martyrs.

The church is named after the patron saint of the city, who came from Antioch in the 2nd century to set up the first Christian community.

Other Byzantine structures in Ravenna and its environs have also withstood the test of time, including Sant' Apollinare, a 6th century church, containing apse mosaics representing Christ transfigured beside a great jewelled cross.

The church is in the vicinity of an ancient port built by the emperor Augustus, whose statue can be seen in the vicinity. The port, a station of the Roman fleet of the Adriatic, wa connfcted to Ravenna by the Via Cae sarea.

Theodoric entered Italy from what is now Bulgaria to expel Odoacer, the German ruler who succeeded the last western Roman emperor and established Ravenna as his royal seat.

Before the arrival of Odoacer and Theodoric, Ravenna had been selected by emperor Honorius as the capital of the Western Roman Empire.

The mausoleum of Empress Galla Placida, half-sister of the Western Roman emperor Honorius, who ruled Ravenna and the West for many years as regent for Valentinian III, her 6-year-old son and Honorius' successor, is also covered with well-preserved mosaics in a peaceful, nighttime setting.

But she is buried in the Theodosian mausoleum near St. Peter's in Rome.

During the reign of Emperor Justinian and his wife, Theodora, in Constantinople, Ravenna continued to grow in splendor, and one of the church mosaics still attest to that glorious age, depicting Theodora in imperial dignity.

Cassette tapes can improve travel time

By MORRIS D. ROSENBERG
Los Angeles Times — Washinton Post News Service

Extended family auto trips have long been the bane of harried, headachy mothers and fathers — except, of course, for those exceptional few who are blessed with iron-clad nerves and always-angelic smallfry.

So it was only a matter of time before a company seeking wider use of its product figured out that the cassette tape could make family togetherness on the highways no accident.

Jabberwocky, a San Francisco firm, for 10 years has produced The Mind's Eye, dramatizations of the classics on tape for schools and libraries (with accompanying texts), and for broadcast on radio stations around the country.

Now, in a new venture aimed at entertaining — and educating — restless auto passengers of all ages, it has reduced the price of its recorded programs by eliminating the printed supplementary material designed for the classroom.

When teachers began taking cassettes home with them to play on long car trips, and then asked Jabberwocky for more, Bob Lewis, president of the company, decided to try for a larger market.

Their catalog includes adventure classics such as "Huckleberry Finn" (three cassettes) and "Oliver Twist" (two cassettes), fairy tales, a Great Americans series, Greek classics, American novels and "authentic Tolkien." Cassettes are full productions with professional actors, music and sound effects — not merely narrations of books. The "Lord of the Rings" (12 cassettes) has been aired on National Public Radio.

Comparison of an edition of "Wind in the Willows" with the taped version confirmed Jabberwocky's claim that "the actual language of the original book" is retained. Stories are tightened during dramatization, but they are not rewritten. To simplify and change style "is like playing Mozart with one finger," Lewis says.

Single tapes are currently being sold at $4.95 each and generally run about one hour, while many stories require more than one cassette. The three-hour "Lake Tahoe-to-San Francisco drive is a 'Huckleberry Finn' trip," notes Lewis, who has a Ph.D in literature.

For a free copy of the catalog, write The Mind's Eye, Dept. T., Box 6727, San Francisco, Calif. 94101, or phone toll free 800-227-2020.

Another kind of cassette aid for the motorist — self-guided, taped tours of U.S. national parks and cities here and abroad — have been part of the travel scene for many years. The American Automobile Association, which has noted the availability of such taped tours in its guidebooks for more than a decade, is now preparing to sell cassettes through local chapters at $9.95 each, with a 10-percent discount to members.

These cassette tapes are produced by CCInc. Auto Tape Tours of Scarsdale, N.Y., which has been selling them for 15 years and is considered the major company in the field. Designed to be both entertaining and factual, with music and sound effects, each tape is checked for accuracy by authorities such as local historians or park historians and chief naturalists, according to Larry Johnson, president of the firm.

Jamaica offers variety of vacations

By JERRY HULSE
Los Angeles Times — Washington Post News Service

NEGRIL, Jamaica — Lightning lit up the horizon like artillery fire as the jet from Miami put down at Montego Bay.

The runway glistened with rain and a soft breeze blew in from the sea. Waiting at the airport was a Jamaican friend, David Webster, and after clearing customs we drove west toward Negril, Jamaica's laid-back village that's stirring, but still not wide awake.

The headlights stabbed the darkness while the car sloughed through puddles, and the night was filled with the melody of singing frogs.

Lightning flashed in the heavens again and rain spattered against the windshield as we approached Rita Hojan's Sundowner Inn on a lonely stretch of road an hour out of Montego Bay.

The night man led us to our rooms. "Weather report says sun's gonna shine tomorrow," he said.

Outside, the frogs kept up their concert until the approach of dawn.

THE SUNDOWNER was the secret hideaway of artist Norman Rockwell, who came to fill his soul with the serenity of this untroubled Jamaican resort.

With brush in hand he sketched the peaceful scene for others who chose the Sundowner as their special place in the sun.

A two-story block of rooms, the Sundowner faces a slip of beach and a garden of palms with bursts of pink hibiscus. Guests take their meals on the terrace and doze in the sun. A swinger's resort it is not. Rather, the Sundowner is one of those quiet beachside inns that Jamaica is famous for.

Fans spin in the ceiling. Plants hang in the lobby. And for those who arrive with a thirst, rum punches are dispatched with haste.

Less than a mile up the road other vacationers check in at the relaxed little Coconut Cove with its 32 apartments — all with kitchenettes — and an octagonal dining room. Like the Sundowner, it faces the sea, with free sailing, snorkeling, riding and tennis. Cane walls surround the bar, and the parlor is packed with paperbacks, the perfect shelter on one of those stormy days when thunder rocks Jamaica.

BEYOND THE VILLAGE of Negril, islanders gather at Rick's, a seaside version of the old watering hole of "Casablanca" fame. Guests dine outdoors on river perch, red snapper, lobster, chicken creole and Jamaican fish chowder. Sunsets are smashing and Rick's rum coolers are staggering. It's one of those boy-girl spots that inspire romance.

For vacationers bent on losing themselves inexpensively, American Ian Fennell provides water beds, hammocks and kerosene lanterns (sorry, no electricity) at Awaee Maway, a village featuring bungalows with thatch roofs, outdoor showers and bananas free for the picking. Up to six persons share one of his pads in the palms for as little as $25 a night during the off-season or $50 in winter. What's more, the Jamaican lady who rides herd over the place, Evadney Muschette, will cook up a meal free in the communal kitchen. Just bring along groceries.

A similar setup does business across the road — a peachy spot called Rock House. Here a scattering of eight thatch bungalows rise in a stunning setting of peaceful grottos, spindly palms, breadfruit trees and sea grape. One needn't light a lamp. At Rock House, there's electricity. And fans.

Six of the cottages feature kitchenettes. And what with no dining room, guests bring their own groceries and booze.

STILL, THOSE LOOKING for action would lose their marbles at Rock House. The fast life simply doesn't exist. Instead, there's a beauty and special peace that permits the nerves to unravel. A swimsuit is all that's necessary. Day or night. Footpaths lead to narrow bridges spanning the rocky ledges. And because there is no beach, bathers make their own way down stone steps to water so clear a pebble 30 feet away appears within easy reach. All this for as little as $50 a day for a double, or $65 beginning Dec. 14.

I have a fondness as well for the little 10-room Charela Inn that brings to mind a Spanish hacienda along the Costa del Sol. The choice of honeymooners, it faces a splendid beach a short stroll from the village of Negril. Two rooms are special: 201 and 203. Both upstairs, they provide guests with a straight-on view of the sea, which at sunset takes on the soft shade of faded jeans.

Proprietors Daniel and Sylvia Grizzle feature Jamaican and French fare that's served in a relaxing dining room facing the beach. Rates: $100 and up, breakfast and dinner included.

THE CHARELA INN has as a neighbor, the Negril Beach Club, that's strikingly reminiscent of Aggie Grey's old place in Samoa. The same foliage, the same open skies, the same informality that possesses Aggie's sets it apart from other resorts along Negril's coastline.

Signs in the lobby tell of sunset cruises aboard a 40-foot Polynesian catamaran equipped with a bar and manned by musicians, plus picnic outings to Roaring River that spills from mountains rising behind Negril.

Negril is a seven-mile slice of sand the likes of which posters are painted. As Jamaica's newest resort setting, it continues to attract a mostly younger crowd. Some settle in with families in private seaside cottages. Others do their number at Hedonism II. Here some vacationers sunbathe in the buff. Others merely go topless. Not everyone, mind you, but a sufficient number to attract attention.

Obviously, one's wardrobe poses no problem. No coats, ties, or cocktail dresses. Just shorts or swimwear. And on at least one night each week, merely a sheet will do. Appropriately, it's called Sheet Night. Indeed, everyone appears in what resembles a mob scene reflecting the days of Caesar and the golden age of the Roman Empire.

At Hedonism II they do a weekly number with wet T-shirts as well.

THE MANAGEMENT calls this the "Home of Hedonism," and who's to argue? The disco runs till dawn. Sometimes later. Much, much later. Just recently, an all-time record was established when the disco closed down at 11:05 a.m., this after a session that began early the night before.

Manager Tony Ferrari blinked. "They came up for air and went right off to lunch!"

One morning last month John Issa was having coffee when a guest stumbled into the dining room. "You're an early riser like myself," smiled Issa.

The poor fellow sighed. "No. Just haven't been to bed yet."

Proprieter Issa came up with the idea of Hedonism II when he found his old hotel formula wasn't working well anymore. The new formula involves a one-package deal. For as little as $700 a week one gets shelter, meals, snacks, entertainment, sports events, ad infinitum. Issa studied the Club Med routine and tacked on a couple of twists of his own. At Hedonism II even the booze is free. Not just wine, but the hard stuff as well.

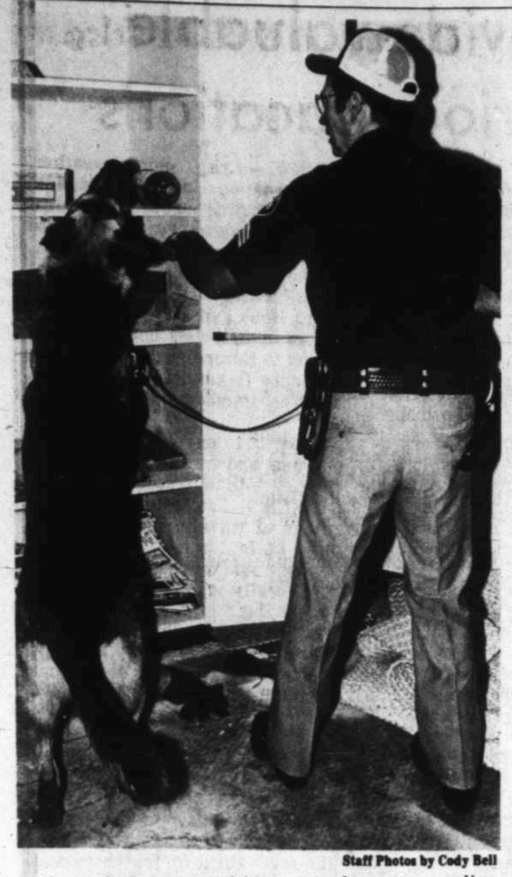
Canines assist police with variety of duties



Staff Photos by Cody Bell

One of the many things patrolmen use police dogs for is sniffing out controlled substances. Here Sgt. Ed Nicks and one of the canines search a closet for marijuana.

(Continued from Page 1E)

without my knowing it and Joll came out of the car on his own and bit and held him until I came around."

"As soon as you made an aggressive move toward me he'd be on you," Bostick said. "He's trained to go for the arm that is holding something." This is to prevent the subject from using anything he may be holding as a weapon against the officer or the dog.

It is standard procedure to call in the canines for building searches, Nicks said. "We make an average of four to five building searches with the dogs each night. They present a faster, lower, smaller moving target than a patrolman with a flashlight does." The sergeant emphasized that using dogs in building searches saves tax dollars because the animals take less time to do the job and don't require as much manpower.

The officers issue a warning before sending in the canines. "If he (the suspect) is still, the dog won't bite him. If he moves, the dog will bite to hold," Bostick explained.

"Any burglar that's ever been captured by a dog has never been caught in another building in Midland County since," Nicks maintained.

THE DOGS ARE also used in tracking. Nicks told of one instance where the animals tracked and apprehended a burglar:

"A patrol unit found a broken window at a local fast food restaurant and called for a canine unit. We found blood where the man had cut himself trying to break in. The dog team up and tracked him from that business about one and a half blocks to a second broken window (in another business). The canine warning was given with no response. The dogs were sent into the building and apprehended the burglar."

In another instance an 8-year-old Odessa boy had run away from home to be on his own after watching a movie about a family living in the wilderness. Despite the best efforts of the Midland and Odessa police departments, citizens and a Department of Public Safety helicopter, the boy could not be found until two of the police dogs tracked him down.

Currently the officers are training the canines to sniff out drugs. Two are now adept at finding marijuana, and Nicks predicted that by January all would be marijuana-trained and would next tackle cocaine, heroin and methamphetamines (speed). It takes four to six months before the dogs are fully trained and able to find hidden drugs in vehicles, buildings, lockers or on a person, Nicks said.

HE EXPLAINED HOW they teach the canines to find marijuana — by cutting open a tennis ball, inserting the drug and gluing it together again. By playing with the tennis ball, the dogs begin to associate the smell of marijuana with playing ball, and are eager to find anything bearing that smell.

But the method does have its drawbacks. Nicks said recently the dogs were sent into the schools to search for drugs in lockers, and he was a little embarrassed when the dogs picked out five lockers that contained no controlled substances — only tennis balls.

At least two dogs and their officers are on patrol each night in unmarked station wagons. After work the animals go home with the patrolman.

"The dogs need to relax and be a family pet just like we need a family life," Nicks said. "That's why we prefer that a member of the K-9 Division be married and have kids."

But the dogs belong to the City of Midland, which furnishes dog food and pays veterinary expenses.

"They usually quit working them (the dogs) when they are 8 or 9 years old," Smith said. Bostick's dog, Casper, is 8½ and is soon to be replaced. After the dogs are retired they live as a housepet with their patrolman. "If he doesn't want him (the dog), we'll find a good home for him, but that's never happened," Nicks said. "The officers get very, very attached to them."

Serve spaghetti squash

By CECILY BROWNSTONE
AP Food Editor

SPAGHETTI SQUASH

2¾-pound spaghetti squash
Salt and pepper to taste
¾ of a ¼-pound stick butter (6 tablespoons), cut in very thin slices

With a heavy wide-blade sharp knife, cut squash in half lengthwise. With a sturdy spoon, remove seeds and adhering heavy white fiber and stringy yellow portions; stringy portions on cavity pulp do not have to be removed. Place squash halves, cut sides down, in a 10 by 10 by 2-inch baking dish. Pour water to depth of 1 inch around squash. Cover tightly, with foil if necessary. Bake in a preheated 375-degree oven until tender when pierced with a fork — about 1¼ hours. Remove squash from dish; pour out water from dish. Scoop pulp into dish; with a fork, separate into strands. Sprinkle with salt and pepper; distribute butter over top. Cover tightly and return to the 375-degree oven until very hot — about 10 minutes.

Pregnancy unit alternative for expectant teens

By RHONDA RIGENHAGEN
Lifestyle Writer

A class is in session in Room 12 of the vocational center at Midland High School. Fifteen girls are bending over their history, English or mathematics books, taking notes, talking softly among themselves or with one of the teachers.

The room looks like any other classroom at MHS — a couple colorful posters decorate the rather cheerless walls — except that the girls are seated at tables instead of desks — which is just as well, since some of the students in the pregnancy unit are in their ninth month.

The pregnancy unit is a special education program — these students are, by definition of the state, disabled. Years ago pregnant girls were taught by teachers who came to their homes. But the number of girls requiring the service increased so much that 11 years ago the MHS pregnancy unit was begun. It serves an average of 44 girls per year, encompassing the entire Midland Independent School District.

The students, predominantly minority, are not required to attend classes in the pregnancy unit. "They're not made to come," said Virgie Lewis, one of the instructors. "If they want to remain on the main campus they can do so. They might be encouraged to transfer if they are sick and absent a lot, but it is up to them."

"We recommend they stay in their regular classes until they feel they need to transfer," Helen Burgin, the other teacher, stated. "It's better for them to stay in their regular classes as long as they can, because they lose half a credit a semester (when they enter the program)."

(The girls attend class from 9 a.m. until 1 p.m. Because of the shorter day, they take five courses instead of the normal load of six, earning 2½ credits rather than three. Most students have no problem meeting graduation requirements, but, if necessary, a senior will be allowed to take a full course load in order to graduate.)

"We try to keep these girls caught up with their regular classes," Ms. Burgin said, "because they have to go back after they have had their baby."

In addition to teaching basic subjects to the girls, whose grades levels range from eighth to 12th, the teachers also arrange for speakers to come in once a week. Groups represented include March of Dimes, Planned Parenthood, Childbirth With Preparation, La Leche League, etc.

"We work with them a lot on child growth and development, but we really don't emphasize it," Ms. Lewis said. "Our goal is to keep these kids in school and help them maintain their grade level. They don't want to be reminded every minute of the school day that they're pregnant."

As mentioned, the program is an optional one. Some seniors need to stay in their regular classes because the pregnancy unit doesn't offer the courses they need. But most pregnant students who stay in school eventually join the unit. To do so, the girl must have a statement signed by a doctor verifying her condition, she must be approved and admitted by the Admission Review and Dismissal Committee, and a parent or guardian must be present at this meeting if the student is not married and under 18 years of age.

There is no "typical" stage when the girls enter the pregnancy unit. "Some are just a couple months pregnant and come in ... some stay in their regular classes until their sixth or seventh month," Ms. Burgin said.

"A few each year just stay in their regular classes," Ms. Lewis added. They had no statistics on how many expectant mothers dropped out of school.

Mothers are excused for two weeks after the birth of their baby. They are given home assignments, then they return to the pregnancy unit for two weeks before going back to their regular classes.

The teachers pointed out several advantages of attending these special education classes.

"The shorter day, for one thing," Ms. Lewis said, "and not having to climb stairs or be in the hustle and bustle of the halls. Also, we usually establish a closeness with our students that normally isn't in a regular classroom."

Also mentioned were individualized instruction, more tolerance for illness and absenteeism, preparation and education in childbirth and parenting, allowing students to begin later in the day after morning sickness has usually passed, having the school nurse and a diagnostician assigned on a part-time basis, and receiving understanding and support from classmates.

"There isn't the stigma attached (to teenage pregnancy) that there once was, but still on occasion the girls have said they feel uncomfortable with their (former) classmates," Ms. Lewis commented.

"There's moral support here, because they're all pregnant," Ms. Burgin added.

One disadvantage Ms. Burgin pointed out was that with only one or two students in any one course, they lose the benefit of class discussion and involvement and input from a teacher who specializes in the subject. "They can do a lot more things in a whole classroom of students than I can with my three," she said.

The courses are taught somewhat on an independent study basis. Students may work alone or with others taking the same course, while the teachers bustle from table to table answering questions. Because the class is small it is more informal and intimate than most.

"We're all real close," one student commented. "We're all in the same position, and I feel like I'm not alone. I'm glad there's a place like this where I can go. If there weren't I'd be in a worse position."

Staff Artist: Jan Drake

Teen faces single motherhood

A typical high school sophomore worries about a pop quiz in history, being noticed by that cute blonde across the room in study hall, or getting an embarrassing pimple before the homecoming dance.

Evette (not her real name) is a 16-year-old sophomore who has a bigger problem — in three months she will be facing life as a single mother.

"I've always told everybody that I was going to graduate and play a sport or go to college for music," she said. "But then when I came up pregnant, I felt like I had let everyone down. I felt like 'I want to find a way to get rid of this baby. I don't want this baby.'

"I'm real scared — I can't say I'm not. I'm scared about having it. But now I know that I'm not the only one, and if I've made it this far I can go on and finish making it."

Evette's situation is far from uncommon. In 1980, according to a pamphlet put out by the Texas Family Planning Association, one out of five births in Texas was to a teenage girl, 28 percent of whom were unmarried.

"At first I felt like I was alone, that I was being turned against, that I'd never have any more friends. But afterward it seemed like everyone called and came to see me and they got closer instead of farther apart. Nothing really changed."

One of the things that worried Evette was telling her 18-year-old boyfriend he was about to become a father.

"At first he was scared," she recalled. "He didn't know what to do; he didn't know how to face my mother. But now he's taking it real good. He wants to go to (childbirth) classes with me."

Had they considered marriage?

"When I first got pregnant I thought about it, but then I kept on thinking that would be a big mistake for me. I'm not ready for it. The only time you should get married is when you're really ready for it. Right now I'm not, and I'm just going to wait till I graduate and see then what things are like."

Another problem was those inconveniences that most expectant mothers face. "I had morning sickness from the first month of my pregnancy. I couldn't stand it. It was hard for me to go through morning sickness. But now I'm used to it and I get up and go to school and everything.

"Most of my friends have come up and asked me, 'What's it like?', and I have told them, 'It's not a fun thing to be pregnant. The best thing for you to do is take my advice — go to a doctor and get on some kind of (birth control).

"Sometimes I feel left out. I've told them it's best to graduate and get what they want first and then think about having a baby.

"I won't be able to do a lot of the things that I used to do, like going to movies and things like that. After I have my baby a lot of things that I used to do are going to be cut down.

"I believe that I really can still go on (to college), but it's going to be a little bit harder," she continued.

After her child is born, Evette plans to return to Robert E. Lee High School and get back into sports. Her mother will take care of the baby at home. But now Evette is taking classes in the pregnancy unit at Midland High School (see related article).

"I would rather go to a normal high school rather than the class I'm going to now, but I haven't got a choice. In order for me to graduate ... I have to go to this pregnancy school and finish high school, so I think it's nice. I think that was the best thing for me to do.

"The first two weeks I went I felt like, 'Hey, this ain't right. They're just sticking us in a room and they don't want anybody else to see us.' But then I realized that they're just trying to make us

Staff Artist: Jan Drake

comfortable and give us another chance in life. I'm glad that there is a place like this where I can go. If there weren't I'd be in a worse position."

Evette began her sophomore year in the pregnancy unit, so she never attended regular classes while she was visibly pregnant.

"I would have felt real different. You feel embarrassed and ashamed. You feel like you're the only one and the whole world is going against you. I think the folks in the class would think of me as a bad person. But when you get with the rest of them (classmates in the pregnancy unit) you feel a lot better. It seems like you're not by yourself. It's better for all of us to be in one class."

Although the class days are shorter (from 9 a.m. to 1 p.m.), Evette didn't feel her education was suffering.

"They spend a lot more time with you. It's nice because you really have a chance to do what you want to do and not get left out.

"We're all real close. We're all in the same position."

Seminar combines outdoor activites, management training

By CAROL KRUCOFF
Los Angeles Times-Washington Post News Service

WASHINGTON — Pam Davis stood wide-eyed and trembling on a tiny treetop platform, preparing to leap into the air, grab a rope just beyond reach and descend 50 feet to the ground.

Minutes before, the 37-year-old management consultant had contained her paralyzing fear of heights long enough to clamp on a helmet, clip a sturdy rope to a harness wrapped around her body and climb 50 feet up a nearby tree — pausing frequently to embrace the trunk, breathe deeply and shout "huh, huh" in an effort to calm her wildly wobbling legs.

Aided by shouts of encouragement from eight supporters on the ground, she had clambered onto a treetop platform and traversed a thin, 40-foot wire to a second platform in an adjacent tree. There Gary Jordan, a 30-year-old advertising agency executive, stood ready to comfort and encourage her to make the breathtaking mid-air leap that would end her heart-stopping challenge.

"Say something you guys," she cried to her colleagues below. "Oh God, I feel terror. Absolute, stark terror."

"C'mon Pam you can do it," called up 30-year-old investment banker Wendy Wachtel.

"We're rooting for you," yelled filmmaker Tommie Smith, 28.

"Okay, I'm going to jump," cried Davis, as she leaped into the air and grabbed the thick rope. The small crowd below began to cheer and within seconds she was lowered gently into their waiting arms.

"I could never have done it without everybody's encouragement," she gasped, still shaking as helpful hands unhooked the rope from her body. "I'm usually the risk-taker who's held back by others, but all of a sudden it was my fear of heights that was keeping everyone else back. I got through this because I'm basically a group person, and I felt a physical rush of support from everyone."

THE SCENE MAY sound like a rough day at boot camp, but it was an exercise in organizational team-building developed by Growing Edge, Inc., a 2-year-old company that combines outdoor problem-solving activities with conventional management training. The resulting "adventure seminars," held at sites in rural Virginia, are designed to help supervisors and work teams recognize and deal with performance-inhibiting patterns such as mistrust, unresolved conflicts and faulty communication.

"These kinds of problems become very visual and accessible when you're working on a task like trying to get everyone over a stream without getting wet," says Growing Edge president Bill Underwood. "Gradually the exercises help build stronger team and personal leadership patterns that are immediately transferable to the job."

Modeled after Outward Bound's 20-year-old "personal challenge" programs — which grew out of British wartime survival schools — Growing Edge is one of an increasing number of outdoor education organizations adapting the wilderness training concept to the corporate setting. Outward Bound now offers "managers-executives" courses featuring sailing, mountaineering and canoeing at several of its schools across the country. Corporate participants have included Xerox, Reader's Digest and Martin Marietta.

Boston University's 4-year-old Executive Challenge program runs work-group training programs at an 850-acre camp in New Hampshire for about 20 organizations annually including Polaroid, General Electric and the Norton Co. Venture Forth has worked with several Fortune 500 companies and a management-labor negotiating team at its 145-acre site in the Poconos, and Philadelphia's Institute for Outdoor Awareness (IOA) runs training programs for teachers, therapists and other professional groups at different sites.

Like most of these organizations, Growing Edge meets first with company managers to discuss training goals.

"Then we design specific outdoor initiatives geared to achieving them," says Underwood, who calls the "ropes course" that Davis completed "a metaphor for a coporate challenge that requires interpersonal support. The group has a certain amount of time to get each person up the tree, over the wire and down the rope. To succeed, everyone must do it."

EACH OUTDOOR PROBLEM "is physically manageable," he says, "and designed as a tool to help participants get to the heart of personal and group issues that impede their performance. If they're having trouble coordinating between departments, we might set up an initiative that divides them into groups and requires them to share resources and skills to perform a difficult feat, like getting 10 people over a 13-foot wall in 12 minutes. Or if they want to work on onflict resolution we'd set up an initiative that requires them to do some negotiating within the group before they could even begin the task."

The outdoors beats the classroom as "an easier and more effective way to demonstrate contemporary management concepts," says Philip Bartow, a former management professor at the University of Pennsylvania's Wharton School and now president of IOA. "I use the woods the same way a psychiatrist uses a couch — it's the place to bring out ideas and insights. I'm not as interested in getting people up a cliff as I am in helping develop new strengths and values and translating them to the organization."

The dramatic contrast between the office and the outdoors makes these training adventures "an extremely powerful way to learn," concurs Executive Challenge director Anton Lahnston, an associate professor of organizational behavior at Boston University. "The environment allows individuals to become freed up from the normal roles and patterns. People feel more comfortable getting involved and talking.

COMPANIES BEST SUITED to benefit from Executive Challange, says Lahnston, "are organizations that really believe in worker participation at all levels of the work force." High-tech companies, research and development firms and organizations involved in producing a diverse range of goods and services, he says, seem to derive particular insight.

"It takes a certain kind of company to pick up on this. We're still facing some negative feelings from people who think it's just spending corporate money on a program with the flavor of summer camp. But it's very serious organizational development work. Once they try it, they begin to see how it works."

Another corporate concern is safety. Reputable companies are extremely safety-conscious and have insurance. Some ask participants to sign waivers acknowledging that they will be involved in activities that have an element of risk.

"People involved in our program are safer than when walking across the street," Lahnston claims. "We've had only one injury, to an ankle, and that was the person's own fault."

Among the corporate advocates is Polaroid, which has sent about 165 staffers to Executive Challenge as part of its management training program. "It's an eye-opening experience," says Steve Stuick, who heads Polaroid's management development department. "I hear lots of positive things from individuals and their bosses about the effect it had, which I think of as a kind of recalibration.

"Often people have a bunch of assumptions about things they couldn't do in all areas of their life — work and home. This experience challenges that, and people find they can do things they've never dreamed they could. Afterwards, when they face a problem, they have a different outlook on it ... a 'can-do' attitude.

"As with any kind of training, evaluation is difficult, but we hope it translates into their ability to do that in the workplace."

"Unlike a lot of training programs, it's not boring," says Bob Sprague of Better Way, Inc., an Ohio agency that works with delinquent children and received training from Growing Edge. "You really get a feel for your strengths and weaknesses."

On-the-job improvements resulting from the experience range from "subtle changes of attitude" to "shorter, more efficient meetings," says Ellen Weinstock, co-manager of Richmond's Community Food Market, who attended a Growing Edge adventure seminar with the market's 11-member board of directors. "We were experiencing lots of factionalization because half of us are elected and half of us are staff.

Information on other seminars

— Executive Challenge: Boston University runs outdoor management training programs at an 850-acre camp in New Hampshire and will offer similar programs in Atlanta starting this month. Three-day program, about $525 per person. Boston University, School of Management, Office of Executive Programming, 685 Commonwealth Ave., Boston, Mass. 02215.

— Great Encounters: Specializes in experiential training for women. Open group for working women Oct. 30-31, $45 per person per day, custom-tailored groups $75 to $100 per person per day. P.O. Box 1891, Washington, D.C. 20013. 546-4654.

— Growing Edge, Inc.: Adventure Seminars, with fees on a sliding scale from $35 to $250 per person per day, depending on the organization and the program. Two sample workshops for interested managers will be offered on Oct. 26, Oct. 28 and Nov. 18 for $50 per person. Rte. 1, Box 164, Midland, Va. 22728. (703) 788-4197.

— Inner Quest, Inc.: Designs outdoor training programs focusing on skills such as stress management and team-building, $20 to $60 per day. 140 Queen St., Leesburg, Va. 22075. (703) 471-1014.

— Institute for Outdoor Awareness: Designs management-training courses using caving, climbing, canoeing and-or orienteering in locations around the country, about $70 per person per day. Box AK, Swarthmore, Pa. 19081.

— NTL Institute: Two, four-day "executive challenge" courses in cooperation with Boston University to be offered next spring for $600. P.O. Box 9155 Rosslyn Station, Arlington, Va. 22209. 527-1500.

— Outdoor School: Runs outdoor Training Seminars for executives incorporating camping, caving, climbing and-or canoeing, about $45 per person per day. 1050 Knight Lane, Herndon, Va. 22070. (703) 471-0171.

— Outdoor University: Tailors adventure programs to group needs in areas ranging from rafting to sky-diving. Day programs, $10 to $70; overnight programs, $37 to $580. 508 N. Washington, St., Alex., Va. 22314. 548-3838.

— Outward Bound: Offers "Management Team Building" courses in its five schools around the country, incorporating sailing, mountaineering, canoeing and-or backpacking. About $850 for eight days; will design special programs for individual companies. 384 Field Point Rd., Greenwich, Conn. 06830. (800) 243-8520.

— Venture Forth: Tailors outdoor experience programs at its Poconos camp to meet specific organizational goals. Typical four-day program, $500 per person. P.O. Box 98, Shawnee-on-Delaware, Pa. 18356.

Josh Taylor, talented 'Waltz Across Texas' star is popular, versatile actor

By LINDA ANDERSON
Lifestyle Writer

Josh Taylor is a twice-blessed man. Not only is he in a profession that he is highly skilled at, but he has the added blessing of really enjoying his work.

Josh Taylor is an actor by choice. He is a native of the Midwest — Chillicothe, Ill. — and in high school was named All-State quarterback. With this background, he might have gone on to play professional football. But Taylor decided he wanted something more.

At age 18 he married his high school sweetheart. The couple had a daughter, Tristen, and after five years of marriage were divorced. Taylor and his ex-wife parted amicably and remain good friends.

Taylor, with a Bachelor of Sociology degree from Dartmouth (graduating at the head of his class) and a law degree from the University of Denver, decided to try a new and different challenge — Hollywood.

Taylor said the first few years were tough and lonely, but success finally arrived. Not only is he now one of the most popular characters on daytime television, Chris Kositcheck on "Days of Our Lives," and formerly title character in a primetime television drama, "Riker," he is also co-starring in the movie "Waltz Across Texas," which will have its West Texas Premiere Oct. 22 at the Howard Hodge Theatre in Midland. Money raised from this premiere will go to High Sky Girls Ranch.

The movie was filmed in and around Midland and Odessa, and features local places such as The Bar and The Stardust. Approximately 300 local citizens are also featured in the movie, some with speaking parts.

"It was a real joy. I've done several personal appearances around Texas and I always enjoy it," Taylor said. "Texas is one of my favorite places. And that's not a political statement either — I always enjoy Texas."

He added that working on location in the area was pleasant, too. "We had a good cast and a good crew, and that made it one of those enjoyable experiences. Everygody treated us well — we even played some basketball while we were there — and we had a heck of a good time. I'm looking forward to coming down again."

Taylor has had much work experience with both film, used for movies and nighttime television, and with three-camera tape, used for what some say is the most demanding form of television entertainment, daytime soap operas.

He said that while he enjoys doing both films and three-camera tape, there are differences. "Film is more stop-and-go. Film, from a physical standpoint, is more tiring. It takes more time to shoot film — sometimes you do a scene in one take, sometimes you do it in 20 takes.

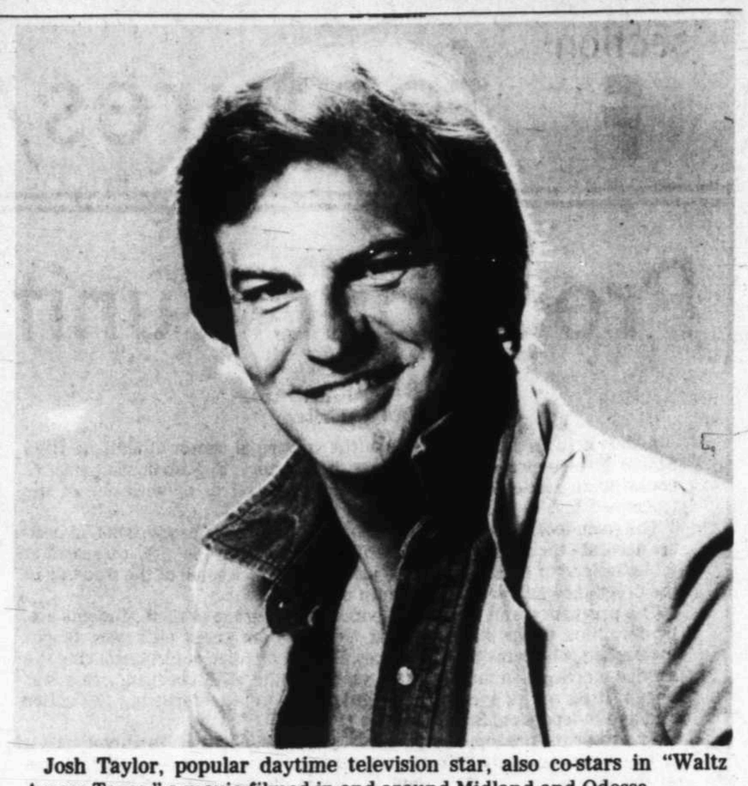
"With three-camera tape you can get all the shots at the same time. You're doing constant movement — there's no delay in daytime TV. You don't do as much location work. There's not as much stop-and-start. It's more mentally taxing to do three-camera tape because you're up against the clock."

Taylor said that in taping "Days of Our Lives," the cast arrives at 6 a.m., rehearses all day, and does the actual taping at 2:30 p.m.

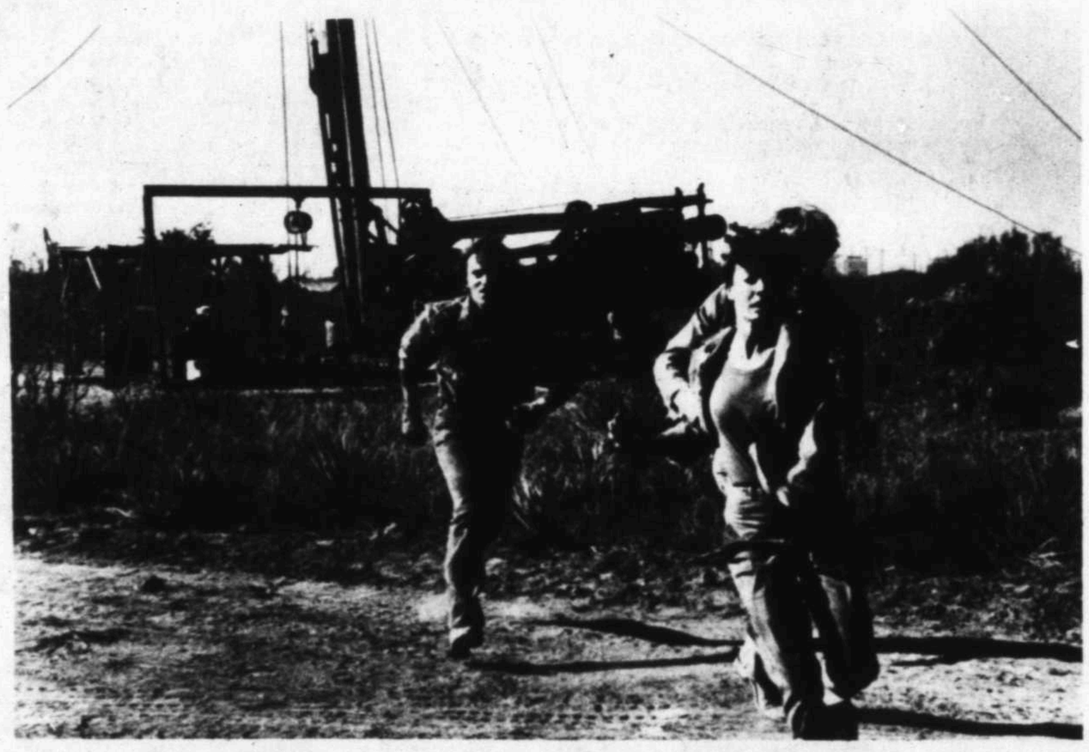
The differences in films, television, plays, and all other forms of acting do not bother him. "Acting is acting," he said, "and as long as you put the right amount of information into your mind, you're going to go with it. Acting is acting, and you'd simply better be very honest in your performance. Part of being a professional is you just have to know acting techniques. It really is just a matter of knowing the situation and training your body and mind to respond to that type situation."

Taylor and several other stars of "Waltz Across Texas" will be at Midland Park Mall on Oct. 23 at 12:30 p.m., and Permian Mall in Odessa on Oct. 23 at 1:30 p.m. to make personal appearances in conjunction with the West Texas Premiere of the movie. The show at Midland Park Mall will begin with "Waltz Across Texas" dancers, and at Permian Mall will begin with a dance contest.

Money raised from the West Texas Premiere of "Waltz Across Texas" will be used to help finance new construction and expansion of facilities at High Sky Girls Ranch. For ticket information, call the Ranch at 694-7728. All checks for tickets can be sent to the High Sky Girls Ranch, 902 Harvard, Midland, 79701.



Josh Taylor, popular daytime television star, also co-stars in "Waltz Across Texas," a movie filmed in and around Midland and Odessa.



Gail (Anne Archer, center), John (Terry Jastrow, left) and Luke (Josh Taylor, right) make a dash to safety from their wildcat well in a scene from "Waltz Across Texas."

Siberian squill bulbs planted in fall create lovely flowers in springtime

By HENRY MITCHELL
Los Angeles Times — Washington Post News Service

WASHINGTON — Here is one thing to do: Plant six bulbs of the Siberian squill now.

I think that is a nice change from the somewhat frantic advice to gardeners so often given this time of year, in which the gardener perceives there are not enough hours in the day to do all the chores of fall, even if he did nothing else but putter about the garden.

The Lord knows the fall is the busiest of seasons. But I have noticed again and again that gardeners survey the vast horizon of fall-planted bulbs, and since they have small space and small cash, they wind up doing nothing whatever. But if every year they set some small goal, in the way of planting bulbs, they would increase their spring pleasure out of all proportion to the time and money spent.

The squill, **Scilla sibirica**, is one of the showier of the small bulbs. It blooms in late March, several hanging trumpet-bells on 6-inch stems. The color is gentian blue, of an intensity surprising in so small a flower.

I have only a few clumps myself, but with the last snows I peer closely to see if the sharp, fat cones — the sheathing leaves — are above ground yet. One day, at last, they are up, and within a week they are in flower, lasting two weeks or so.

IN STRONG, spring sunlight this piercing blue is beautiful beyond any expectation and consorts perfectly with such a full, strong, glistening, waxy yellow as the flower of the daffodil, "February Gold" or "Peeping Tom." These daffodils usually bloom for me on March 15 and last for three weeks or even four, if we escape an early-April heat wave that brings them to an abrupt close.

Gardeners with endless time and space will hardly be satisfied with anything less than wide drifts of these squills and daffodils, but my earnest plea is to start even in the smallest way. Sometimes, for example, there are steps in front of the house where the early-spring sunlight falls before the trees leaf out. A circle 6 inches in diameter will accommodate six squills neatly, and if another square foot can be found, then five "February Gold" daffodils can be planted back of them.

It is a small enough exertion that anyone can manage it. Often a gardener is encouraged by the pleasure he gets from just such a project and the following year tries a few more bulbs new to him, and soon he is quite far gone in the pleasant insanity of spring color from fall-planted bulbs.

So often there is a patch of earth no larger than 2 or 3 square yards between a city house and sidewalk. Perhaps there is one shrub, perhaps nothing at all. In just such a spot, where it is out of the question to make anything resembling a great garden, the bulb flowers are worth their weight in gold; and I have noticed passersby rarely disturb or pick the flowers when they bloom. And the amount of joy a few bright flowers in March and early April give the stranger, who perhaps has not even a few square feet to garden in, is immense.

SUPPOSE THE GARDENER'S strength and energy are such that he can manage a bit more than the 15 minutes it takes to plant the six squills and six daffodils. Then he might, insofar as strength lasted, find himself recklessly including 25 crocuses in his plans, even though it would take several minutes and a couple of dollars to achieve this.

Last spring I was pleased to see odd crocuses here and there where I never planted them. Some have come from seed, apparently, while others have popped up from general digging operations. Tiny cormlets, or little offsets, are almost invisible and are easily spread about when one digs up a hosta here, a plumbago there, and in the spadefull of earth are hidden tiny offsets from bulbs that within a couple of years bloom to the surprise of the gardener.

Suppose even the heroic efforts thus far deemed within the limits of the ordinary man have not exhausted our mythical gardener, who is bold to go even further. Then he might try 10 bulbs of the wild tulip, **Tulipa clusiana**, which in April sends up a slender stem a foot or 15 inches high with an elegant little tulip at the top.

Baressi to speak to AAUW

Dr. Joseph Baressi, superintendent of the Midland Independent School District, will head a panel discussion entitled, "An Overview of MISD Directions," for members and guests of the Midland Branch of the American Association of University Women at a dinner meeting to be held at 7 p.m. Thursday at Ranchland Hills Country Club.

Baressi assmed the office of Superintendent in August of 1982, having served as assistant superintendent for Instructional Services, MISD, since 1980.

He is active in community affairs as a member of the MAST Team of the Chamber of Commerce, Rotary International and is current president of the Midland Chapter of the American Heart Association.

Joining Baressi on the panel will be Maridell Fryar, coordinator of Secondary Language Arts and Fine Arts. Mrs. Fryar has been a teacher of English Speech and Director of Forensics at Lee High School for 16 years. She is currently president of the Texas Speech Communication Association and vice-president of the American Forensic Association.

Dr. Joseph Baressi

Patricia Alexander, coordinator of Gifted and Talented Programs, while new to Midland, brings a background which includes initiation of programs for gifted students in Pleasantville and Temple. She has already coordinated the Gifted Education Midland (GEM) Program for Midland schools, which is an enrichment program to enlarge opportunities for students whose skills and horizons need continuous expansion.

VIPS (Volunteers in Public Schools) Chairman Gayle Dodson will present information on the wide choices of participation for volunteers who wish to help with the group's goal of "furthering the quality of education in the public schools through the use of volunteers." VIPS is an outgrowth of work and plans put into effect by the PTA City Council. Mrs. Dodson holds a State and National Life Membership in PTA, and is a past president of the Midland City Council PTA.

Dorothy Campbell, president of AAUW, notes that "the advancement of education is one of the continuing goals of our national organization," and considers this program an opportunity for members and friends to become more aware of the expanded goals and opportunities being offered Midland students.

Members must make reservations by Oct. 18 by calling 683-9807.

Any woman holding a baccalaureate degree is eligible for membership in AAUW. Call 694-0258 for information.

Joan Lowery Nixon

Cancer victims need love, psychiatrist says

LA JOLLA, Calif. (AP) — Cancer-stricken husbands and wives could benefit from sexual intimacy if they are physically able and their partners find it appealing, a psychiatrist says.

Sex can be an important way to deal with the depression brought on by the disease, Dr. Theresa Crenshaw said in a speech Monday at the sixth annual cancer symposium at Scripps Memorial Hospital.

She is director of the Crenshaw Clinic and co-director of the department of human sexuality at the University of California's San Diego School of Medicine.

In another session, a Stanford University researcher said major scientific advances have boosted the survival rate among sufferers of Hodgkins' disease.

Hodgkins' disease "is no longer as major a threat to the 7,000 to 8,000 Americans it afflicts each year," said Dr. Saul A. Rosenberg, head of the oncology division at Stanford Medical Center.

The newly developed treatment methods have led to better than 80 percent survival at five years for all stages of the disease, Rosenberg said. "Results have been even more dramatic in children, with 96 percent surviving after 11 years and 93 percent permanently cured," he said.

Rosenberg said he and his colleagues are working now on even more effective treatment programs using drugs with a narrower spectrum of side effects.

"It's a measure of our success that in a disease that was once invariably fatal, we can now shoot for improving the quality of life rather than just survival," he said.

Children's author to appear at benefit

Kappa Delta Alumnae Association will present its Eighth Annual Benefit Gift Show from 10 a.m. — 6 p.m. Oct. 28 at 3400 Salisbury. The show will feature items from the Friday's Child Shop of San Miguel Square, formerly the Mary Jane Shop, and will include unique gifts, children's clothes, Christmas ornaments and decorations, and collectables.

A special attraction at the show this year will be Joan Lowery Nixon of Houston, a former member of the Midland Kappa Delta Alumnae Association. Mrs. Nixon is the author of children's books, and she will be available to autograph copies of her books, which have been ordered through B. Dalton Book Sellers in Midland Park Mall.

Combining a degree in journalism from the University of Southern California with a credential in elementary education from California State College, Joan Lowery Nixon has written for children from the preschool age through the young adult years. Forty-nine of her books have been published, and a number are under contract to be published in 1982 and 1983.

Some of the books Mrs. Nixon has written include "The Seance," a young adult novel that won the Edgar Allan Poe award from the Mystery Writers of America in 1981 for best juvenile mystery; "The Kidnapping of Christina Lattimore," winner of the Edgar in 1980; "The Mysterious Red Tape Gang," Edgar winner for 1975; "The Alligator Under the Bed," 1975 winner of the Texas Institute of Letters award for best children's book; "Volcanoes: Nature's Fireworks," (1979), "Glaciers: Nature's Frozen Rivers," (1980), and "Earthquakes: Nature in Motion," (1981), three of the science books she co-authored with her husband, geologist Hershell Nixon, were awarded certificates as outstanding Science Books for Children by the National Science Teachers Association and Children's Book Council Joint Committee. In 1982 she was honored by Central Missouri State University for her contribution to Children's Literature.

Joan is a member of The Authors Guild, Mystery Writers of America, National Writers Club, Friends of the International Board on Books for Young People, and is a charter member and former board member of the Society of Children's Book Writers.

Anyone wishing to attend the show may call 682-3376 or 683-4387 for an invitation. Proceeds from the show will go toward a scholarship presented by Kappa Delta each year to a Midland College Student.

Chili relish makes interesting snack

By CECILY BROWNSTONE
AP Food Editor

SNACKTIME FARE

Grilled Cheese Sandwiches
Chili Relish
Cookies & Beverage

CHILI RELISH

16-ounce can tomatoes, drained and chopped
7-ounce can whole kernel corn, drained
4-ounce can chopped green chilies, undrained
½ cup (28) cocktail onions, drained from an 8-ounce jar, thinly sliced
½ cup (22) small pitted ripe olives, thinly sliced
1 medium red pepper (5 ounces), chopped medium-fine (¾ cup packed)
3 tablespoons chili sauce
2 to 3 teaspoons chili powder

In a medium bowl stir together tomatoes, corn, chilies, onions, olives, red pepper, chili sauce and chili powder.

Serve at once or chill overnight to allow flavors to blend. Makes about 1½ pints.

Also worn is a silk blouse printed red and black on white. With it is a black straw and white felt hat and black and white leather gloves.

AT WIT'S END

Back problems universal

By ERMA BOMBECK

For years, I've been searching for that one common denominator that would bring the people of this nation together. Some universal topic of conversation that would unite everyone in a unified quest for the truth.

I've found it. A cure for a bad back.

Everyone in the world has a bad back, had a bad back ten years ago, is going to have a bad back, knew someone personally with a bad back, or took a person with a bad back to lunch once.

None of them are happy people. They gather around punch bowls and gas pumps and open a conversation with, "Can you remember where you were and what you were doing the day your back went out?"

Back sufferers are on a first-number and name basis with all the vertebrae of their spinal column. They also share another bit of wisdom. They can cure you if you can stand the pain of listening to the treatment.

Hang from a towel bar by your feet and run the shower, inhaling as much steam as your lungs can stand.

Import 12 Korean aerobics instructors to dance on your spine.

Sleep in a cradle in a fetal position with a teddy bear between both knees.

Sleep on a vibrating bed of River Rock.

Live on a diet of seaweed; kelp, raw fish and a vitamin supplement.

Have a member of your family sneak up behind you and use the Heimlich maneuver on you when you least expect it. (Have a good lawyer before you try this one.)

Bad backs were invented 200 years before fire and have somehow managed to elude the instant cures of science for several thousand years. I suppose it should be of some comfort that we can still count on them to represent not only a challenge to the medical community but to serve as a social communication throughout the world. It should be, but it isn't.

Man has tiny bones once meant for a tail and usually unworkable muscles once meant to move his ears.

DEAR ABBY

Daughter's right is mother's wrong

By ABIGAIL VAN BUREN

DEAR ABBY: I am a 17 1/2-year-old girl with a problem: my mother. She asked me if I was sexually active with my boyfriend and I told her the truth, and now I'm not allowed to see him anymore.

My mother listens in on all my telephone conversations and I am treated like a criminal. If I go anywhere, I have to tell my mother where I'm going so she can call and check up on me, and she always does.

I am seeing a counselor. She advised me to drop my boyfriend to make peace with my mother, but I love him too much to drop him. I was a virgin when I met him and I have no plans to make love with anyone else, so I don't think I'm a whore like my mother says I am, do you?

Now I'm sorry I was so honest. I really love this guy, and I think I have the right to do what I want with my body, don't you? — SHOULD HAVE LIED

DEAR SHOULD: I don't think you're a "whore" either. Neither do I think you should have lied.

As for the "right" to do what you want with your body: As long as you are living under your mother's roof, she has the "right" to raise it if you don't abide by her rules.

DEAR ABBY: Can you tell me if a wife has any legal right to know some facts about her husband? I've been married for several years, but I don't know where my husband works. (He says, "Somewhere in Detroit.") I don't know what he does, how much he makes, how much he owes, or if he has anything saved. I don't know if he has any insurance, and if he has, who the beneficiary is.

He never has any friends over. He never mentions any names. No one ever calls him at home, yet he must have some friends because he goes somewhere. If I ask any questions, his routine answer is, "Don't worry about it."

Thank God I've got a good job. I make all the house payments. I also pay for improvements. He pays the utilities. I buy my clothes. He buys his.

No mail comes here for him. It sounds as though he could be a criminal, doesn't it? Well, I had the police check, and he has never been arrested for anything. He's never paid any fines or been in jail.

If someone comes to see me, he goes into the bedroom and stays there. No amount of pleading will get him out. After my guest leaves, he yells at me for opening the door. He doesn't even want me to answer the phone. Please help me. I need some answers soon. — IN THE DARK IN MICHIGAN

DEAR IN: Your husband is either sick (paranoid) or he is hiding out. The chances are that he is using a phony name. One thing is certain — something is very strange. First see a lawyer to determine a wife's "rights." You may have to hire a private investigator to find out why his behavior is so secretive. If you choose to live with this mysterious man, it's your right, of course. But I am "in the dark" as to what you are getting out of this marriage besides abuse.

DEAR ABBY: My husband was named "Junior" after his father. His father is known as John Paul Jones Sr.

When my husband's father dies, will my husband then be known as John Paul Jones Sr.? — MRS. JOHN PAUL JONES JR.

DEAR MRS. JONES JR.: No. He simply drops the "Junior," because if his mother survives his father, SHE will be known as Mrs. John Paul Jones Sr., and were your husband to become John Paul Jones Sr., you would then become Mrs. John Paul Jones Sr., causing much confusion between you and your mother-in-law.

"Navajo Weaver," William Robinson Leigh, oil painting.

Public not sure how to deal with recent peaceful youth movement

By ANN JAPENGA
Los Angeles Times

The mods are a new breed of well-behaved young people whose trademarks are shiny Vespa or Lambretta scooters and whose favorite hangout is the O.N. Klub in Hollywood.

HOLLYWOOD — Seven squad cars pulled up in front of the O.N. Klub on Sunset Boulevard on a recent Friday night. Inside the club, the houselights went up. Officers lined up sweat-drenched kids and began checking IDs.

If this had been a punk crowd, there might have been spitting, kicking and a lot of cursing, but whether or not the police knew it, they had chosen the perfect night for a raid.

The club was filled with mods, a new breed of well-behaved young people whose trademarks are shiny Vespa scooters. These are the kinds of kids who say "excuse me" to pass in a crowded club. Before going out, they ask their mothers if their sweaters and slacks match.

But the police were ready for young toughs and they handcuffed some mods, and wrote tickets for expired registrations on some of the 27 scooters parked outside the club.

It seems society has adjusted to dissent, but police and parents alike have trouble knowing what to do with this new youth movement. The mods are not protesting anything. They are not into drugs.

FOR ANYONE USED to movements with an ax to grind, they are hard to understand.

John Irvin was 14 when he saw the movie that would change his life. The movie was "Quadrophenia," starring The Who. It is a look at a group of mid-'60s British youth who called themselves mods and dressed fashionably in reaction to motlier youths.

Before he saw "Quadrophenia," Irvin was drifting. "I wasn't a hippie or nothing. I didn't wanna be a punk," he said. "Punks are slobs. They're not even brought up right."

What Irvin and thousands of other upper-middle-class youth saw in "Quadrophenia" that led them to become mods remains a mystery, but it certainly had something to do with style, with class. Now Irvin is 18; he has seen the movie more than 200 times, and mod style figures in everything he does.

Mods spend a lot of time talking about what is wrong and what is right, fashion-wise. Someone like Irvin, who has been a mod for three years, has nothing but disdain for the newcomers who slip on a parka and polish a scooter and think they are mods.

"I went through it all. It took me time. Now I know what's right. There are just some things you gotta know. For instance, my scooter. I would never put round mirrors on it. It's not right."

THE ALTERNATIVE? Irvin sent to England for $75 oblong mirrors and a set of tassels to hang from his handlebars.

The right scooter is a Vespa or Lambretta. You would no more try to get by with a Suzuki than you would substitute a trench coat for a parka.

To earn the $650 his Vespa cost, Irvin worked at a tool-and-die factory after school. Like other mods who think nothing of riding as far as San Francisco to hear a favorite band, he has no fear of pitting his tiny machine against the freeways. Irvin said he drove the freeway from his home to the O.N. Klub, but he said he does not want his parents to know that. (He has got problems enough with them already: "they don't know what I am. They don't know what to say to their friends about me.")

He dresses to code everywhere he goes. This night he was wearing a peach-colored sweater over a Fred Perry shirt and a thin tie. Even on the hottest nights, he wears a parka with a Royal Air Force bull's-eye insignia on the back. His hair is a half-inch long and curly. His cheeks are faintly sunburned — not from the beach but from riding around on the Vespa.

His black bowling shoes are an inspiration borrowed from the No. 1 mod band, the Jam, "but mods don't all wear bowling shoes," he said. "I don't want people to think just because they wear bowling shoes they're mods."

Most mods still are in their teens, (that is what got them busted at the O.N. Klub), but Irvin says he knows some elderly mods — as old as 20 or 21. "I know I'll still be into it when I'm older," he said. "I'm just starting to get lots of lights on my scooter."

AFTER THE FASHION code was discussed and the bands appraised, the question arose: What's the philosophy behind the mod movement? For that first time in the conversation, Irvin paused, his authority suddenly shaken.

It's something he has not considered, he said.

Lately, it has been getting harder to remain a mod, Irvin said. Recently, a girl mistook him for a punk. It hurts when people cannot tell the difference, when no one respects the rules. "To tell you the truth, I really get bummed sometimes about all the people," he says. "I think about not doing it at all sometimes."

What if John Irvin sold his scooter and hung up his parka?

"What would I do? What would I be? Is that what you mean? I don't even know," he said.

Clyde Grimes' parents were worried because he had gotten his hair cut short. He was coming home from thrift shops with bags full of old clothes and he had formed a band, the Untouchables.

TO HIS PARENTS' surprise, when Grimes emerged from the bedroom in his mod attire, he looked more conservative than they did. Soon he was making friends with older people on the bus who were pleased with his neat look.

Eventually, Grimes invited his family to the O.N. Klub to witness the mod movement he and his friends were largely responsible for starting. Grimes said a lot of the "ace faces," the sharpest guys and girls, were there that night. Clyde's grandmother got up and danced. "My family thoroughly flipped," he said.

Club managber Howard Parr agrees that the mods are as charming a bunch as a club owner could ask for. "They don't drink a lot. You don't see them falling about. Overall, it's a friendly situation."

Parr was 8 years old and living in England when the first wave of mods appeared there.

About three years ago, Clyde Grimes and Kevin Long, lead singer of the Untouchables, started dressing up mod and coming to the O.N. Klub. They liked the challenge of trying to outdo each other in dress.

BRIDGE WINNERS

TUESDAY

1. Mrs. Overton Black, Art Welker
2. Mrs. A.L. Gifford, Mrs. Irvin Dahlberg
3. Mr. and Mrs. G.A. Buehler
4. Mrs. Lydia Wilkerson, Mrs. Ford Chapman

WEDNESDAY

North-South
1. Mrs. D.E. Morris, Mrs. E.D. Penn
2. Kay Jones, A.L. Gifford
3. Joe Salmon, A.L. Buehler
4. Mrs. Billy Crites, Joe Rann

East-West
1. Mr. and Mrs. Jack La Vigne
2. Mrs. Ford Taylor, Mrs. Tom Sloan
3. Tie: Clayton Forgoson, Dick LaClair, Mrs. E.K. Filley, Mrs. Vera Powers

THURSDAY

1. Mrs. John Berry, Mrs. Lula Duncan
2. Mrs. John Weideman, Mrs. G.A. Buehler
3. Tie: Mrs. J.P. Ruckman, Mrs. Tom Sloan, Mrs. Lydia Wilkerson, Mrs. Irvin Dahlberg

SUNDAY

1. Mrs. Jim Servatius, Mrs. Laura Williams
2. Mrs. Thelma Black, Mrs. R.E. Boyle
3. Mrs. Valerie Piper, Mark Hanzelka
4. Mrs. D.E. Morris, Mrs. E.D. Penn

FRIDAY

1. Mrs. J.C. Williamson, Mrs. J.E. Sheeler
2. Mr. and Mrs. Al Buehler
3. Mrs. B.L. Crites, Mrs. Dale Myers
4. Mrs. Ford Taylor, Mrs. W.B. Smith

Olympic Records

The record for winning the most Olympic medals was set by swimmer Mark Spitz of the United States. He won a total of 11: nine gold, one silver and one bronze.

A record for enthusiastic Olympic memorabilia collecting is probably being set by sports historian Jim Jacobs. He's looking for old Olympic programs, home movies shot at the Olympic Games, medals, cups, plaques, posters and other Olympic memorabilia. If you have any such items and would be willing to trade or sell them, you can write Jim Jacobs at Nine East 40th Street, New York, NY 10016, or call (212) 532-1717.

Design for Today

by Belle Glaros

With the help of a designer and your own taste and perhaps a carpert sales person, the best colors and textures can be determined for your house. Then there are some questions to ask. First what is the wear performance? Will the carpet wear or shed under heavy foot traffic, vacuuming and cleaning? How does this carpet withstand soiling and staining? How colorfast is it? Will the colors resist water, spotting and fading from the sun? How cleanable is it? Will it withstand steam cleaning? Is it easy to remove stains and dirt? Finally, is it flame resistant? Will cigarette or fireplace embers quickly turn to smoke and flame?

Turn to BEVERLY HILLS INTERIORS INC., #30 Oakridge Square, 686-9607 for all your decorating needs. We have the expertise and facilities to design and manufacture furniture and accent pieces for your home or office and are also the exclusive agency for the Phyllis Morris line of high fashion furniture. For interior and exterior designing see our talented staff.

DECORATING TIP

Neutral colors such as beige, white, etc. are the easiest to use when colorful accessories are to be used.

Not all gold is created equal.

18Kt. GOLD 18Kt. gold & diamond bridal sets.

18Kt. gold contains more gold and less alloy than 14Kt. It's richer with gold, and more luxurious. Isn't your love worth the difference? a. 695. b. 920. c. 1,025. d. 1,425. e. 1,890.

f. Special, 599./499.

Mother Goose, Cheri Hill, and Little Boy Blue, Carolyn Stroman, read a story to Mrs. Stroman's 4-year-old daughter, Monica. The fairytale characters appeared at Midland County Public Library's Story Hour Tuesday. Sponsored by the Midland Junior Woman's Club, Story Hour is held 10-11 a.m. every Tuesday during the school year for 3- to 5-year-olds. Groups wishing to attend should contact the library for reservations.

Classic collectors: For love or money?

By ED MCCULLOUGH
AP Writer

NIAGARA FALLS, N.Y. (AP) — Fred Tycher, president of the Pierce-Arrow Society, bristles at the notion that owners of those classic automobiles are investors first and car lovers second.

"Pierce-Arrow created what we think is one of the most beautiful, one of the greatest cars this country has ever produced," says Tycher. "We're the diehards, the kooks who keep restoring them."

Society members bear out Tycher's point that many antique car buffs are primarily hobbyists, though the sometimes dilapidated cars they purchased or inherited years ago now are worth many thousands of dollars.

Henry Becker of Sarasota, Fla., got his 1917 touring car from his father, who bought it used in 1923 for $800. Peter Lapey of Grand Island, N.Y., who said he has restored 12 Pierce-Arrows, picked up his 1926 roadster in 1950.

"Some people love to restore them. Others collect literature," said Becker, who has put 230,000 miles on his seven-seater. "I love to drive it. That's the pleasure."

George Pierce began making cars in Buffalo, N.Y., in 1901, two years before Henry Ford opened shop in Detroit. Pierce-Arrow handcrafted about 100,000 luxury cars before going out of business in 1938.

At the turn of the century, Buffalo was an early center of the automobile industry, home to more than 30 different makes of electric, steam and gas cars.

The Thomas Flyer won the New York-to-Paris "Around the World" race in 1908, and other models were well known. But Pierce-Arrows easily were the best cars to come out of Buffalo.

Lapey, a charter member of the 25-year-old society, estimated that only about 5,000 Pierce-Arrows remain.

"Many were sold abroad," he said. "I got a call recently from a man in Bogota, Colombia, wanting parts for a 1917 limousine."

Society members say that the Pierce-Arrow is the greatest automobile America ever produced, with a possible tip of the hat to Peerless and Packard.

"It's the Rolls-Royce of America," said Al Ferrara of Gates Mill, Ohio, whose 1927 roadster, worth perhaps $150,000, won the society's 1982 Vandever Trophy as top car.

Polished to a gleam, the cars featured huge German silver radiator grills, plush leather seats and walnut dashboards, running boards and oversized tires with hickory spokes. The cars' trademark was a silver archer on the hood and headlights set in the fenders.

A 1910 touring car featured gas lamps, right-hand driving and the sturdy springs and suspension systems so essential in those days of gravel and macadam roads.

Later models — runabouts, phaetons, sedans, coupes, landaus, limousines — featured such innovations as aluminum engines, dual ignition, push-button starting and cruise control.

Carver makes plans for monument

By BILL JOHNSON
AP Writer

GRANITE, Okla. (AP) — Bill Willis is a granite carver who has a dream: He sees a monument of granite 116 feet tall and 126 feet wide with the chiseled faces of the Indian leader Sequoyah, humorist Will Rogers and athlete Jim Thorpe looking right down Main Street.

A red rock mountain at the edge of this southwestern Oklahoma town may seem to be an unlikely spot for a world-famous tourist attraction, but that's where Willis sees his Giants of the Great Plains.

"Each figure will be 108 feet tall," he says. "The presidents on Mount Rushmore are only 60 feet tall. Stone Mountain in Georgia is 90 feet tall, and that includes the horses.

"When it is finished, it will be the largest granite mosaic in the world."

And that's what makes Willis' project different from the faces of Washington, Jefferson, Theodore Roosevelt and Lincoln that stare from the granite cliff in the Black Hills of South Dakota and the horseback figures of Confederate leaders Jefferson Davis, Robert E. Lee and Stonewall Jackson on Stone Mountain.

While the Mount Rushmore and Stone Mountain memorials were carved from the rock, Willis is engraving the likenesses of the three famous Oklahomans on 2-foot-square blocks of granite. Each block then will be fitted together for the finished monument.

He has the bust of Rogers finished and said he hoped to begin work on the bottom part of the monument "when it gets a little cooler." The project is being held up right now by a lack of money, Willis said.

"We've received $20,000 in tax-free donations and my dad and I have put in $25,000," he said. "Contributors can get their name engraved on a panel outside the figures for $25 each, or a family can take a whole panel for $1,000.

"We need at least $1 million more to finish it. We envisioned it as a $1 million project when we began, but with inflation, it's gone up."

Willis said plans call for a small park at the base of the mountain and a zigzag road to the top. "We hope to build a walkway across Main Street, with a little patio, where people can pose to have their picture taken with the giants."

Everthing will be free, he says.

Willis estimated the 3,416 pieces of granite that will make up the monument will weigh 512,400 pounds. It will rest on the granite mountain and will be supported by a steel framework between 10 to 20 feet wide at the bottom and 10 feet wide at the top.

There will be a separation between each 2-foot block "so the monument will be self-cleaning and also to provide a wind easement. We've worked with an architectural engineer, and he has designed it to withstand winds of 160 mph, with a safety factor," Willis said.

Willis got into the giants business because of his reputation in granite engraving. His portraits on granite hang in the Wrestling Hall of Fame in Stillwater, Okla., and the Greer County Museum in nearby Mangum.

Willis said the idea for the giants came because the local tourist organization was looking for a way to attract visitors.

"We anticipate we could draw a million visitors a year to the giants," Willis said. "And all the studies indicate the average visitor spends $25 a day.

"We're talking about a lot of money from a free tourist attraction."

His models were the Charles Banks Wilson portraits of Sequoyah, Rogers and Thorpe that hang in the state Capitol.

"I had to increase the size from 15 inches to 108 feet," he said.

Willis said the portraits were enlarged photographically to 9 feet.

Two fun collections end recent Milan showing

By DANIELA PETROFF
AP Fashion Writer

MILAN, Italy (AP) — Claude Montana for Complice and Luciano Soprani for Basile brought the showings of the Italian ready-to-wear collections for next spring and summer to a grande finale with two young fun-filled collections.

In from Paris, where he will soon present his own label collection, Montana appeared on the Milan runway recently for the first time to take a deserved bow.

From early morning on, the Complice woman has a busy day enjoying life.

First a morning jog in track shorts and a trompe l'oeil running vest painted on a silk T-shirt in electric blue and black.

Next a quick stop at the office to check the mail and read the papers in a cool, efficient pants suit with jean snaps in light blue linen, also known as imitation denim at a high price.

Then it's off to the beach in blue poplin Bermudas and Hawaiian shirt top. A plunge into the sea in a slick black and yellow bathing suit, complete with snorkel and fishing knife, then lunch in an olive green leather suit with blouson jacket and loose mid-calf skirt.

Afternoon sees Ms. Chic back into the city for an important business meeting in a brown and black pants suit with black cotton blouson jacket and chocolate satin pants.

Creole dishes among best of regional foods

By TOM HOGE
AP Wine and Food Writer

One of the most intriguing regional cuisines in America is the Creole cookery of Louisiana and the Gulf states, with its background of French and Spanish kitchen skills.

To add further zest, the dishes have been enhanced over the years by talented black cooks drawing on their African heritage and by the seasonings of the local Choctaw Indians.

It is the seasoning, leaning heavily on pepper, onions, garlic, green pepper and spices, that gives individuality to Creole fare.

One Creole meat specialty is grillades, a New Orleans version of smothered steak, cut thin and cooked slowly with fresh vegetables. Here is a recipe for this dish.

1½ pounds round steak, cut ½ inch thick
Salt and pepper to taste
1 tablespoon lard
1 medium onion, sliced
1 garlic clove, minced
1 tomato, chopped
½ cup green pepper, chopped
½ cup celery, chopped
Parsley

Cut beef into 4 squares, or serving pieces, known as grillades. Season meat with salt and pepper, rubbing seasoning in thoroughly. Heat lard in heavy skillet and cook onion and garlic in fat till golden. Add tomato, green pepper, celery, and the grillades. Cover and cook slowly about 50 minutes, turning occasionally, till brown and tender. Serve with a garnish of parsley. Serves 4. Good with a hearty red Burgundy.

Man seeks 'fugitive financier' Vesco for nine years

By ELISABETH BUMILLER
Los Angeles Times-Washington Post News Service

PHILADELPHIA — The lights went out in John Lewis' Costa Rica hotel room one night in 1978, an event that normally wouldn't have rattled this Philadelphia lawyer with serious eyes and a confident air. But Lewis was scared. He put down his copy of "The Decline and Fall of the Roman Empire" and quickly shoved a couch against the door. Then he waited.

He was waiting for Robert Vesco, the famous "fugitive financier" he'd been chasing for years. Vesco wouldn't actually murder him, Lewis thought in the darkness. That would be dumb. Because just that day, Vesco had told two of Lewis' associates: "I know you've got Lewis with you, and I just want you to know, to show my good faith, that I haven't had him wasted."

J. Edgar Hoover chased John Dillinger. Sheriff Pat Garrett stalked, then shot, Billy the Kid. David Janssen spent four years on ABC as "The Fugitive," searching for the one-armed man. Now John Lewis has joined the hunters, spending the last nine years on the trail of Robert Vesco.

Lewis never did see Vesco that night in Costa Rica. "It was just a power failure, and in 10 minutes the lights blinked back on. But it was yet another episode in a journey that has taken Lewis from his five-bedroom Pennsylvania fieldstone to a world most people see only in paperback thrillers.

With the help of his home computer, Lewis, a partner with the Philadelphia firm of Morgan, Lewis & Bockius, has so far recovered more than $30 million in damages against a bank and a law firm that he says helped Vesco. The Securities and Exchange Commission, which contends in a court suit that Vesco looted $392 million from the empire of the Geneva-based mutual fund Investors Overseas Services, has yet to retrieve a cent.

LEWIS' PREY, A tall man with black hair and darting eyes, is the most famous white-collar criminal suspect of modern times. There are five federal indictments pending against him. The SEC says he owes millions of dollars to hundreds of thousands of mutual-fund shareholders all over the world. The FBI, the Justice Department and the State Department have gone to extraordinary, unsuccessful lengths to snare him. He has allegedly tried to buy the occupants of several White Houses, offering cash for a political fix to his legal problems. (The most well-known charge is an alleged $200,000 illegal campaign contribution to Richard Nixon.) He once owned a sprawling Costa Rican ranch, protected by his private police. And he used to enjoy the "Silver Phyllis," his own Boeing 707 with a discotheque, salon and galley that served pepperoni pizza, Vesco's favorite, as well as seven-course meals with accompanying wines. One biography says the jet was a flying bordello.

Lewis loves every tarnished detail. "It's something out of James Bond," he says, with joy. "There's a certain pizazz about the whole thing."

"Moderate" is more the word for Lewis, although he still subscribes to Mad magazine. He went to Princeton and Harvard Law School. He smokes a pipe, plays squash and tennis, is an occasional lay reader at his Episcopalian church and will repent with a lunch of cottage cheese after eating a pizza during the Phillies game the night before. He is 45 years old and has a lean, stern face and thick eyebrows. In his Philadelphia office, where he talked about Vesco one recent morning, are pictures of his wife, Mary Ann (Wellesley '61), and his three sons, riding horses at the same Colorado ranch where they vacation, without fail, every single year. "I'm a happy guy," he says.

Perhaps his only excess, and he is careful not to go on about it at parties, is Robert Vesco. "Fundamentally, I do not allow anything to come between me and my family," Lewis told Philadelphia Magazine. "But I must say that for most of the last nine years, my professional practice, my every waking moment, my life, in fact — has been Vesco."

HIS INITIAL MISSION, as the lawyer for an accountant representing a group of Canadian and European investors, was to retrieve $60 million for his clients. Of that, he got more than half. In the process, he took 100 depositions, a task that led him to England, Switzerland, Luxembourg and Costa Rica. During one trial, he and a partner holed up in New York's St. Moritz Hotel for nearly four months, preparing the case. Lewis got up at 5:30 a.m., worked until breakfast, stopped briefly and worked through the day, breaking only for squash. After dinner he worked until 2 a.m. "Each part of it was so utterly fascinating," he says, "and in some cases, thrilling."

"They ought to give him an award," says Stanley Sporkin, the chief counsel at the CIA who, as the SEC's chief investigator in 1971, pushed the Vesco case when he says nobody cared. "He's done a magnificent job. He's done things quietly, and on his own. He did it with a passion."

Lewis, who never lost any money to Vesco, says he's never met him but would like to. He keeps a tape recorder by his office phone, just in case Vesco calls.

Has he considered that he may be obsessed? Or living vicariously through a man whose life is a heisted jewel compared to his?

Lewis thinks not. "I tend to believe that if I had the same intentions as Vesco," he says, purposefully, "I could have done a better job of it."

THERE IS SO much Robert Vesco lore in the nation's libraries and legal documents that there are now Robert Vesco buffs — Vesco included. "He apparently eats it up himself," says Lewis. "He'd really rather be the fugitive financier than the guy in the suburbs with two kids and a good job."

Already, two Vesco books have been written, which is about how long it takes to fully describe his exploits. (Lewis himself asks people whether they want the five-minute or the five-hour version.) Here's the five-minute one:

Vesco, the son of a Detroit auto worker, dropped out of high school and worked briefly as a salesman. In 1966 he formed International Controls Corp. of Fairfield, N.J., a company that made tubes and valves for NASA. By 1970 he was a millionaire. A year later, he took over Investors Overseas Services, the mutual fund conglomerate. The SEC contends in its suit that he soon began transferring the mutual-fund savings into "shell" companies that he controlled. From that, he planned to create "Vescoland," an international business zone in Costa Rica, recognized as a sovereign state with its own government, laws and stamps. But by then, the SEC — and shortly thereafter, John Lewis — were chasing him.

"Standoffish and introverted as a youth," writes Vesco biographer Robert Hutchison, "Vesco later said he felt discriminated against because his name ended in a vowel." He weighed about 200 pounds, Hutchison adds, "with a tendency toward spreading flaccidity. ... He did not stare at people but coldly peered through them, and his speech was often brutally direct."

Now Vesco is believed to be living in Nicaragua and is said to be much thinner and sick, perhaps suffering from a heart or urinary-tract problem. Some say he's lost as much as 80 pounds. In May, he tried to enter Costa Rica for emergency medical treatment, but wasn't allowed to leave his plane. "I think he's looking for a safe haven," Lewis says.

Lewis' own tale is no less intricate than Vesco's. For that reason, it comes in a five-minute version, too. "There's really nothing more boring than some lawyer basically telling war stories," he says. "But I have found that the name Vesco is magic." He settles in on his couch.

IN 1973, A Canadian accountant named John Orr was named by the Supreme Court of Ontario to represent the 200,000 investors who had lost $60 million from one of the largest mutual funds controlled by IOS. Lewis, after some lengthy legal preliminaries, sued Vesco and two of his top assistants, alleging fraud and theft; the Bank of New York, which Vesco had used as a depository; and Willkie Farr & Gallagher, the law firm that Lewis charged had helped Vesco with most of his IOS and Fund of Fund deals.

The court ruled against Vesco and his assistants, who are both, like Vesco, still at large.

More controversial, at least in Lewis' life, was suing the bank and the law firm. Even some of his own partners seriously questioned the propriety of going after brethren. "He took on the establishment," says Sporkin. "And he's part of the establishment."

On Dec. 28, 1979, he settled with the New York law firm for an undisclosed sum. Back at Morgan, Lewis, he was a hero. But there was still the Bank of New York to fight. He and his partner, Jerry Calvert, camped out in the St. Moritz, on and off, from February to June of 1980. The hotel staff even got a little excited about the case. Then on July 18, a six-woman jury found the Bank of New York liable. The damages against the bank, plus the undislosed damages from the law firm, wound up as more than $30 million.

The St. Moritz maids and bellhops brought in champagne.

In the two years since, nothing Lewis has done at the firm has lived up to the Vesco case. There was a war between Penn Central and the Hunt brothers of Texas for the control of the corporation, which Lewis, representing Penn Central, won. There was a patent case over automobile batteries, now about to go to trial. But in the back of his mind, there's always Vesco.

"TIME IS MARCHING on," he says. "I just haven't made up my mind what is the best course of action. Sometimes, not doing anything in terms of spending your client's money is the best course of action. I just don't know.

"It's unfinished business with me, though, and I must say that annoys me. Everything is done now, as far as I'm concerned, other than Robert Vesco." He muses about hiring investigators to find him or, more realistically, perhaps meeting with the SEC to discuss a joint offensive.

"Yes, I do miss it," he says. "So in that sense, I'm happy it's unfinished. I'm of two minds. I want to see the Vesco thing over with, but at the same time I'm reluctant to see it all go away, because it's so fascinating. And frankly, that's one of the reasons I turned last year to writing a first novel. I've wanted something to sort of ease the letdown and of having most of this stuff behind me."

They look something like a lion but they're one of the world's smallest monkeys. The golden marmosets measure less than a foot long and weigh under a pound.

Never slice bread when it's still hot from the oven. You'll get neat, even slices if you wait until the loaf is cool. The loaf will slice better on its side.

FOCUS: Arden Grover
Came to Midland for a few months, has stayed 30 years

By LESLIE HAINES
Energy-Business Writer

Independent oilman Arden Grover came to Midland 30 years ago, just by chance, knowing nothing about the oil and gas business.

He was a young Minnesotan with two years of night law school under his belt who thought he had his life pretty well planned, even though he had to spend a brief time in Korea.

But a buddy stationed with him in Korea told him about a small, faraway, prosperous place called Midland, in west Texas.

Apparently the guy did one heck of a selling job, because Grover came to Midland after his discharge in August 1952, "just to check it out for a few months."

He never left.

Today he is a successful independent operator, investor, participant in many community affairs and boards, chairman of the board of the Permian Basin Petroleum Association (a newly-created position), an avid jogger, and even a some-time tournament golfer.

HIS PROFESSIONAL career evolved from an independent beginning. "I learned the land business first, by trying to buy leasehold and royalty interests. I was always an independent. Gradually, I was able to hire technical personnel."

Many successful businesses in Midland have changed like chameleons as partners are added and subtracted, or companies merge with one another. Grover's interests have changed similarly: first, he joined with Malcolm MacCurdy and Gordon Knox to form GMK, which operated until the mid-1960s. While the trio was together, it branched out, briefly, into commercial real estate development and was responsible for the 1960 birth of Dellwood Mall on West Illinois.

"We took a fling at real estate," Grover recalls, "and we subsequently sold it (the mall). It detracted too much from our oil business. I guess I felt I should stick to just one endeavor."

GMK then evolved into Grover, MacCurdy and Hoffaker, unitl 1967, when Grover broke away to form Pomaikai.

Pomaikai?

"IT MEANS GOOD luck in Hawaiian," Grover explains. "One of the partners had a ranch in Hawaii. We were active in West Texas and Western Canada until 1971, when we incorporated. Later we merged with Flag-Redfern Oil Company."

Grover spent four years with that Midland company as a vice president but, itching to be independent again, he left to get back into his own thing; Arden Ventures and Arden Oil Corporation, with offices in Midland, Denver and Corpus Christi. He is still a director of Flag-Redfern, as well as sitting on the boards of Leamco Services Inc., and another major Midland independent, Midland Southwest Corp.

"You know, being an independent is different than a large corporate job — you do a lot of things yourself," he explains as he looks thoughtfully out his office window at a growing downtown Midland.

One thing Grover does not like to do himself, however, is worry about raising drilling funds. As a result, he has always been interested in investment banking and has an interest in Prescott, Ball and Turbin, a regional firm with headquarters in Cleveland, Ohio. One of his oldest friends has been a partner there for years, he explains.

"I think if you have to raise money yourself, it deters you from your job — it takes so much of your time. I've been fortunate to have a good relationship with a company that raises our drilling funds, so as a result, I can concentrate on the expenditures rather than the fund raising end of it."

IT SOON BECOMES clear that most of his business interests and leisure activities revolve around friends, which is not unusual in itself. But some of those activities have been a little unusual — like the time he participated in a white-water weekend in Utah's Green River Canyon, as part of an Outward Bound trip just for business men. Or the amateur golf tournament that an Irish friend invited him to for the last three summers in Waterville, Ireland, near Cork.

"I have a number of friends in a lot of different parts of the country. I enjoy it — gosh, that probably sounds corny, but I do. I value their friendships."

Take the time in 1977 that Grover and several other Midland independents, such as Deane Stoltz, head of Tipperary Corporation, published a book.

It was not a book about the oil and gas business; however. It was an autobiography by Teddy Hayes, an ex-Midlander who was a friend of the oil business.

"He is a very close friend who is now 92 years old and lives on a ranch in Arizona. Teddy is the finest man I've ever known," Grover explains. "He was like a second father to me."

HAYES WAS BOXER Jack Dempsey's trainer, among other things, and numbered Franklin D. Roosevelt, Al Capone and Supreme Court Justice William O. Douglas among his friends. He owned the rights to, and manufactured, the Thompson submachine gun in World War II. Hayes used to live in Midland and represented a diamond bit coring company.

"Our real idea was to get his story out before the public so they'd make a movie of his life," Grover explains, "but the book was not a financial success. We have succeeded in attracting some potential televison and movie possibilities," but nothing concrete has taken shape.

Grover is an ardent proponent of the Republican Party, and has been active in some Texas senatorial and gubernatorial campaigns, not as a candidate, but as a volunteer. A political poster poking fun at the opposition lies in a chair in a corner of his office.

He is also a vocal supporter of the oil industry. He is the first chairman of the board of the Permian Basin Petroleum Association, a new position created for past presidents. The organization lobbies for West Texas oil interests.

"I enjoy the oil business. Whereas we are in a down period now, domestic oil will always be at a premium since we do not produce all the petroleum we use."

GROVER'S OPERATIONS include a water flood project near Sweetwater, and exploration activities in west and south Texas, western Oklahoma, and even a bit in western Montana.

Until the gas market firms up, Grover would like to see gas price decontrols put on the back burner. "I am concerned about the timing of decontrol," he says. "I feel that if we were to realize decontrol at this particular time, we would be faced a with a windfall profits tax on gas. I would like to see the law changed so end-users — well, to see a wider use of natural gas for commercial purposes. For example, you can't use natural gas in some factories."

Since many investors have temporarily choked off their dollars to the oil industry, and activity has slowed some, Grover is proceeding with a bit more caution than usual. "We've been slower this year in spending our funds because we feel there are a lot of unusual opportunities that will possibly come along later this year and in 1983. We don't do our thing on a yearly basis anyway, we do it on a two-year basis.

"We didn't want to style our drilling program emphasizing drilling deductions as being the primary incentive."

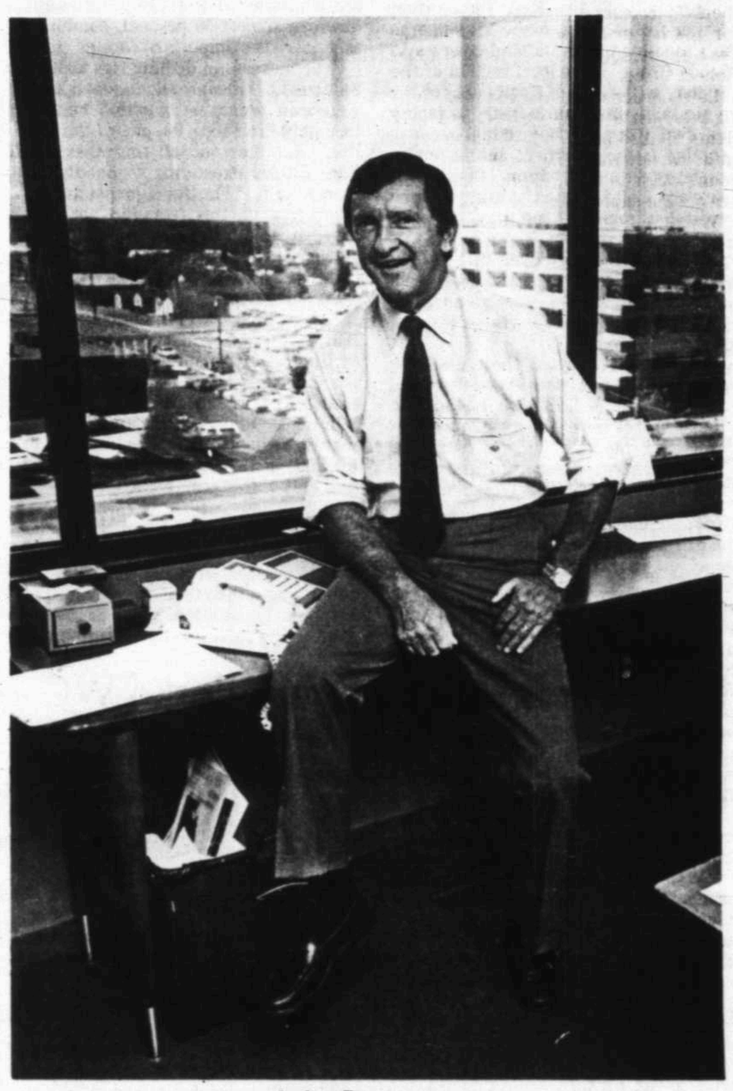
The primary incentive for Grover is finding the best opportunities that will lead to quality reserves. He is also trying to acquire some producing reserves.

"EVEN IN THIS period, when you would think reserves would be available because of adversity in the business, I recognize that the poorer quality properties will become available sooner."

It's a high risk thing, he says."You can't get in and out of this business every year. It has to be played over long range. There's a lot of luck involved — even the very best prospects can be dry."

But the risks don't deter Grover from playing out his hand in Midland.

"I came here quite by chance and I've never regretted a day of being here. There's a degree of friendliness and enthusiasm you don't find in other parts of the country — and of course, there are many opportunities."



Arden Grover

Customs agents seize Italy-bound GE pipeline parts

By DOYLE McMANUS
Los Angeles Times-Washington Post News Service

NEW YORK — The U.S. Customs Service said Friday that its agents have seized $3 million worth of General Electric Co. turbine parts that were being shipped to an Italian company in violation of President Reagan's Soviet gas pipeline embargo. General Electric said the shipment was the property of the Italian company and called suggestions that GE was trying to evade the embargo "absurd."

The machinery, 30 cases of sophisticated parts for pipeline pumping stations, was discovered by customs agents last month at a Brooklyn pier and placed under a formal seizure order last week. It was the first illegal consignment found in the United States and the first seized under the embargo.

"We have begun an investigation to determine whether this shipment was inadvertent or intentional, and whether a criminal investigation is called for," Patrick O'Brien, assistant regional commissioner of customs, said.

Asked whether General Electric was a focus of the investigation, he said: "Any firm would be culpable if they were exporting the goods knowingly in violation of the denial order."

But Arthur Demaris, a spokesman for General Electric, said the company had sold the equipment to the Italian firm when it was still legal to do so. "I don't know how we could be implicated," he said. "We satisfied all the government's requirements . . . There's no way anybody's going to defy the (embargo) order openly. The idea is utterly absurd."

The Customs Service used its announcement of the seizure to warn other companies that it is still enforcing the embargo. "The message," O'Brien said, "is that we do not intend to permit companies to violate the sanctions."

Reagan imposed the export ban in June in hopes of blocking the completion of the trans-Siberian pipeline, which is being built to deliver Soviet natural gas to Europe. The president opposes the pipeline because he says it will make Europe dependent on Soviet energy and provide the Russians with western currency; European countries want the pipeline, and several European firms have defied Reagan's ban.

In a prepared statement issued at its headquarters in Fairfield, Conn., General Electric said the turbine parts were sold to the Italian pipeline equipment firm, Nuovo Pignone, for use on a gas pipeline project in Algeria. Since the parts were not intended for the Siberian pipeline, the Aug. 26 sale was "within the export control restrictions applicable at that time," the company said.

On Sept. 6, however, the Reagan administration accused Nuovo Pignone, a subsidiary of the Italian government oil firm ENI, of delivering three gas turbines that included GE parts to the Soviet Union. The administration retaliated by banning the export of any U.S. gas or oil equipment to Nuovo Pignone, regardless of its final destination.

GE spokesman Demaris said that by the time the Sept. 6 order was issued, the turbine parts were out of GE's hands. Customs commissioner O'Brien said his investigators had not determined who owned the parts when the order was issued.

Initially, a Customs Service spokesman said investigators suspected that Nuovo Pignone intended to use the parts that were seized for the Soviet pipeline project. But O'Brien later said the government had not yet determined where the parts were going after their initial shipment to the Italian port of Genoa.

"In fact, that is irrelevant," he said.

Consumers gain little

By ROBERT BURNS
AP Business Writer

NEW YORK (AP) — Consumers have gained relatively little from the dramatic drop in interest rates. The big winners have been the money movers and lenders: the Wall Street investment firms and the commercial banks in America's money centers.

Some major lenders announced this past week that they were reducing their rates on home mortgages. automobile loans and personal loans. But the breaks were small compared with the recent decline in the lending community's cost of buying funds.

Evidence of the banking industry's gain from the rate drop was a report from Chemical Bank, the nation's sixth largest bank, that its net income soared 44 percent in the third quarter ended Sept. 30 compared with the year-earlier quarter.

Chemical was no exception. Manufacturers Hanover Trust Co. reported a 25 percent increase and Security Pacific National Bank posted a 19 percent rise.

E.F. Hutton Group Inc., the investment giant, reported a 174 percent increase and Shearson-American Express, the brokerage subsidiary of American Express Co., said its profit jumped 23 percent.

The size of such gains was less revealing, however, than the reasons behind them.

Donald C. Platten, the chairman of Chemical, said the leading reason for the bank's big income gain was its higher margin of profit on loans. He said the bank's profit margin was 28 percent more in the July-September quarter than a year earlier.

The reason for Chemical's and other banks' better profit margin was simple: their cost of buying money — from each other and from the Federal Reserve Board — fell, while the interest they earned from borrowers held steady or fell less rapidly.

That was true mainly for the country's biggest banks in money centers such as New York and Los Angeles. The smaller financial institutions that make up the bulk of the banking industry have not felt an immediate benefit from lower rates because they obtain most of their lendable funds from depositors. Many of those deposits are in the form of high-yielding savings certificates not yet maturing.

The big banks are not alone in enjoying the benefits of lower interest rates. Hutton and other investment firms also are doing well. They have seen their brokerage commissions soar in the spectacular stock market rally that was touched off in late August, and again in early October, by the decline of interest rates.

Consumers may not be left out of the improving picture for long. While rates on home mortgages and other consumer loans have not fallen much yet, many economists believe bigger drops are ahead. And business loan rates, which fell this past week to 12 percent, also are expected to fall a bit more.

David Jones, an economist at the investment firm of Aubrey G. Lanston & Co., said at a bond conference in New York this past week that he expected the prime business loan rate to fall to 11 percent by year's end and to 7 percent by next September.

That would be a welcome relief for businesses wracked by the recession and a long period of high borrowing costs. Dun & Bradstreet Corp. reported this past week that business failures in the week ended Oct. 7 rose to 598 from 491 the week before.

For the first 40 weeks of this year, the cumulative total of business failures reached 19,170 — more than for any full year since 1933, when 19,859 businesses went under.

In other business and economic developments this past week:

—The Labor Department said its measure of wholesale prices fell in September at an annual rate of 1.7 percent. For the first nine months of the year, wholesale inflation was running at an annual pace of 3.1 percent. Some economists said they thought the rate of price increases for all of this year might be the lowest since the 2.2 percent of 1970.

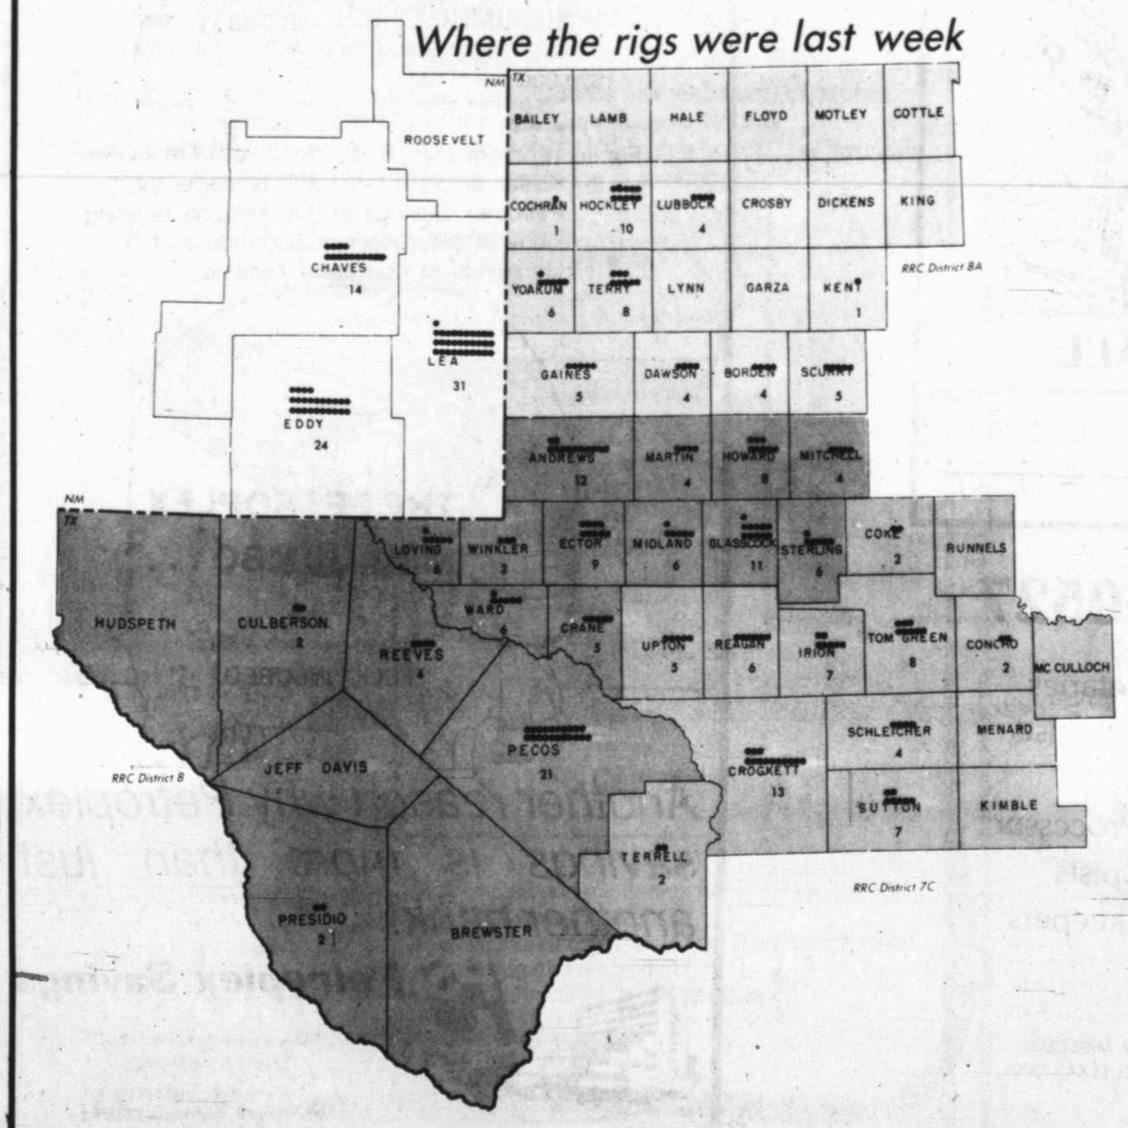
—Fifteen leaders of major corporations met with President Reagan in Washington and urged that he reduce defense spending in order to cut the federal deficit. The business executives also told the president they supported his economic program, although they expected only modest economic recovery next year.

—The Federal Reserve Board reported that industrial production — measuring the output by mines and factories — fell 0.6 percent in September. That marked the 12th decline in 14 months and left production at the lowest point in more than five years. Some economists said, however, they expect output to begin rising soon.

—International Harvester Co., teetering on the brink of financial collapse, announced that all of its nearly 200 lenders had approved the latest modification to its financial rescue plan. The new plan, which eases the repayment burden of Harvester's $4.2 billion in debt, would allow the conversion of up to $350 million of interest and debt principal into equity and also substantially reduce the farm equipment manufacturer's cash interest payments.

—Twenty-three companies made high bids totaling a near-record $2.1 billion for rights to drill for oil and natural gas in the Beaufort Sea off Alaska's North Slope.

Where the rigs were last week



Rig count just so-so

The Permian Basin rig count last week was 282, according to a survey by Reed Rock Bit Co. The tally has remained relatively steady over the past few weeks, in the neighborhood of 280-290.

One year ago the bit makers spotted 468 rigs making hole in the region covered by the map.

According to the score sheet, nine rigs were active in Ector County last week, up from five the previous week — a sizeable gain in relative terms. No other county in the region showed any variation of similar magnitude.

Nationally, the rig count is still heading for the basement. The International Association of Drilling Contractors reports 2,418 rotaries were eating rocks Oct. 11, down from 2,429 one week earlier.

One year ago 4,368 rigs were plying the nation. Two years ago it was 3,164.

The IADC figures show 805 rigs working Texas — on and offshore — Oct. 11. One week earlier the count was 771. Most of the gain occurred in West Texas and the Panhandle. The total inland count for Texas Oct. 11 was 733.

New Mexico was credited with 77 rigs.

America needs a jolt, steel man says

By LESLIE HAINES
Energy-Business Writer

A complacent, preoccupied American public had to be shocked by an event on a December morning in 1941 before it realized the political realities of the world. A similar jolt is needed today to open the eyes of American industry to economic reality, according to an executive with Lone Star Steel Company.

John Morris, Lone Star vice president for corporate affairs, said in Midland recently that not only the devastated steel industry, but all American industry, is "facing World War III, a trade war, from the onslaught" of cheaper priced goods from foreign trading partners.

Morris, with the East Texas steel maker for 34 years, made his remarks at a meeting of the Midland Operations Study Group of the local section of the Society of Petroleum Engineers.

He said American industry is facing its own Pearl Harbor today because foreign trading partners, subsidized by their governments, "dump" their goods into the United States, causing a "total erosion of American industry."

For the week Sept. 27 to Oct. 2, U.S. steel producers were operating at only 39.9 percent capacity, the lowest level since the Depression, Morris said. Steel imports also continue to rise well above last year's levels.

"Inventories started their meteoric rise in 1980 and continued through 1981," Morris said. In 1980, 1.36 million tons of steel were imported. That was twice the amount of 1979. In 1981, 2.389 million tons were imported, and in the first six months of 1982, 1.6 million tons were imported, he said.

The problem is not steel's alone, Morris cautioned.

"It is the American automobile industry, computer, electronics and other industries, individually and collectively, against the nationalized or subsidized industries of the world.

"We are World War II babies having to face up to political and economic realities of upheaval. Are we waiting on an industrial Pearl Harbor, or has it already happened?

"When was the last time you saw an American 35 mm camera?" he asked the group.

Lone Star, one of the nation's largest manufacturers of oil country tubular goods, was the last major producer to substantially curtail its operations, Morris said. The company laid off 3,500 workers in August, but is still producing custom orders.

In the past, Lone Star was able to weather slowdowns in drilling activity, Morris said, but the company was forced to bend this time under the double whammy of a drilling rig count down by almost 50 percent, combined with increased imports of foreign steel.

"The increase in drilling rigs in 1980-81 caused widespread concern that American producers wouldn't be able to supply the needs, in spite of the fact that Lone Star and all the other producers were expanding to handle it," Morris said. "The foreign producers capitalized on this fear and got very aggressive."

This aggression led to some grim statistics: in 1979, West Germany exported 6,000 tons of casing alone to the U.S. In 1980, the figure rose to 38,000, and by 1981, had skyrocketed to 475,000 tons. In the first six months of 1982, West Germany has shipped 208,000 tons of casing to the U.S., Morris said.

In the same period, Japanese exports soared from 399,000 tons in 1979 to 1,093,000 in 1981, and to 627,000 for the first half of this year, he added.

Morris complained of foreign steel producers subsidized by their governments, which allows them lower overhead, and the fact they are able to pay lower wages than their American counterparts. In addition, some producers such as the Japanese have been known to take a profit licking just to preserve their market share, he said, quoting a recent news article to that affect.

One reason domestic industries were targeted by foreign competitors is that the U.S. has always been, and still is, the world's best market for consumer goods and industrial products, Morris said. "Our trading partners have used our credit, our generosity, and our know-how to build their production facilities, and they have ignored international trading agreements."

Morris said Lone Star is ready, willing and able to compete, however, if favorable international trade agreements can be negotiated.

"We at Lone Star Steel think we can compete with any foreign company, provided we all play by the same rules, as determined by the owners, stockholders, managememt, labor and federal governments. But we cannot compete against foreign governments.

"Our trade agreements must be written such that we can fast find out if trade violations have occurred — not in two years, as it takes now," he said.

In January 1981, major U.S. steel manufacturers filed suit against European manufacturers, accusing them of receiving subsidies and "dumping" structural and rolled sheet steel, nails and other steel products. The settlement is still being negotiated.

Oil country tubulars were not included in the suit because at the time, the oil industry was in a boom situation and could not prove it had been injured by European trading practices, Morris said, "but the Europeans knew the challenge would come, so they started dumping as fast as possible."

Morris said he hopes the suit will be enlarged to include oil country tubulars.

In any case, the settlement is expected to take one or two years, and is subject to appeals after that, he said.

"If we have to wait two years, the American steel industry will be devastated," he warned.

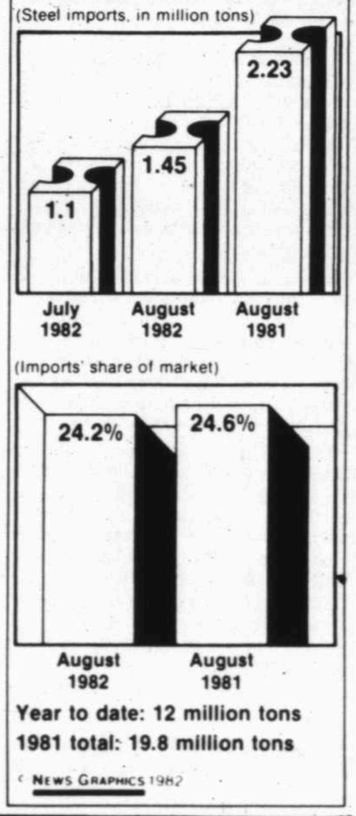
If the situation were to change overnight, Morris said Lone Star could be back to full operating capacity in a matter of a week to 10 days. The vast majority of employees are second and third generation East Texans who have not left the Lone Star area.

The plant is still operating with a skeleton crew today which is handling special orders as they come in, he added.

Morris said the company has been gratified by the support it has received from Texas oilmen, particularly from independents who remember Lone Star's "wildcat-a-day" program in 1973-74. The company made special arrangements at the time to ensure operators had enough tubular goods to meet the oil embargo crisis.

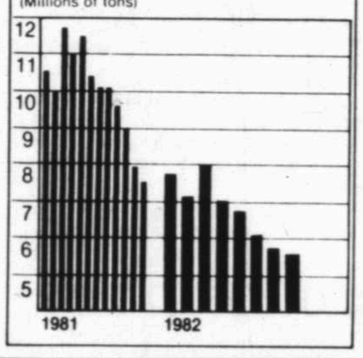
Steel imports rise in August

Steel imports increased 30 percent in August from July but remained below the year-ago figure of 2.23 million tons. Their market share in August decreased to 24.2 percent from the year-ago rate.



Steel production

Raw-steel production fell in August to 5,537,970 tons from 5,718,617 tons the previous month.



Accounting school OK'd

ARLINGTON — A new Graduate School of Accounting proposed for The University of Texas at Austin was approved Oct.8 by the UT System Board of Regents.

The proposal will be submitted for further approval to the Coordinating Board, Texas College and University System.

The proposed Graduate School of Accounting would not offer a new degree program but would provide an integrated degree track so that a full-time student who performs adequately may receive both the bachelor of Business Administration and the Master in Professional Accounting degrees at the end of five years.

According to Dr. Robert G. May, chairman of the UT Department of Accounting, a bachelor's degree in accounting is not the most desirable level of preparation for entry into the independent practice of accounting, a profession that almost without exception requires uniform testing and certification before one can be licensed to practice.

Under the proposed degree track, business students who wish to pursue careers in accounting would be identified early and motivated to pursue the MPA degree. After two years as pre-business majors, such students would enter a three-year integrated professional degree track made up of upper division (junion-senior) and graduate required and elective courses.

Because the five-year program would stress higher level of proficiency in accounting as well as increase nonbusiness education requirements, it would be "superior entry-level preparation" for the accounting profession, in Dr. May's view.

The Graduate School of Accounting would be the acacdemic administrator for the MPA degree (now administered by the Graduate School of Business) and would manage admissions, curriculum and development, and maintenance of records.

El Paso has interest in Anadarko WC

HOUSTON (SWN) — The El Paso Company announced recently its gas and oil exploration and production subsidiary, El Paso Exploration Company, has an interest in a wildcat well which has been successfully tested in the Anadarko Basin of Oklahoma.

The No. 1-21 Benton, located in Beckham County, Oklahoma, tested gas from an Upper Morrow sandstone zone at the rate of 5.6 million cubic feet per day through a 9/64-inch choke, with a flowing tubing pressure of 9,600 psi from selected perforations within the interval 17,149 to 17,498 feet. The well is located approximately 5.1 miles southeast of the nearest producing Upper Morrow well, the Exxon No. 1-2 Whitt. El Paso owns 17.55 percent working interest in the well: 8.78 percent through El Paso Exploration Company and 8.77 percent through El Paso Natural Gas Company. The remaining interest is owned by Mesa Petroleum Company, operator of the well, and by other companies and private parties.

The El Paso Company is a diversified energy company which is engaged through a number of operating subsidiaries in natural gas and oil exploration and production, natural gas liquids, natural gas trans-mission and chemical manufacturing.

BOTTOM LINES

ELCOR CORP.
(NYSE: ELK)

Roy E. Campbell, President, announced that for the first quarter ending September 30, 1982, income before extraordinary item rose to $1,472,000 or $.42 per share which compares favorably to a loss before extraordinary item of $1,238,000 or $.35 per share recorded in last year's first quarter. More than doubling the previous quarter's earnings, net income for the first quarter increased to $2,710,000 or $.78 per share, which includes a $1,238,000 or $.36 per share tax benefit carryforward extraordinary item, as compared to a net loss of $1,238,000 in the year-ago quarter.

He said, "The improvement in earnings is mainly a result of improved roofing market conditions and manufacturing cost reductions achieved by our Roofing Products Group over the last year. In addition, net interest expense for the quarter was $267,000 lower than last year because of lower debt and interest rates.

"The substantial improvements in earnings was achieved even through first quarter sales of $59.5 million were 14 percent below sales of $69 million last year. The lower sales level was primarily a result of lower revenues recorded on engineering and construction contracts.

"Unless the economy undergoes further deterioration, we believe Elcor should achieve a good level of earnings this year."

He also announced September 28, 1982, the declaration of a regular quarterly cash dividend of $0.75 per share which will be paid November 10, 1982.

FLARE INC.
(OTC: FLAR)

The company has reported increased revenues and cash flow from continuing operations for the first quarter of its fiscal year. Frank E. Lasater, Jr., president, announced to shareholders at the company's annual meeting that earnings for the quarter declined, primarily because of greater interest expense and sharply increased non-cash charges for depreciation and amortization.

Lasater also noted that the company was finally being impacted by the dramatic slowdown in general oilfield operations that has occurred over the past year.

Flare earned $300,650, or four cents per share, on revenues of $1,866,835 for the three months ended September 30, 1982. Comparable earnings for the same quarter in 1981 were $427,542, or seven cents per share, on revenues of $1,160,420.

Cash flow from continuing operations for the first quarter increased sharply in 1982, to $957,856 compared with $596,539 for the same period of 1981. Depreciation and amortization for the first quarter of 1982 was $658,000. Comparable charges for the same three months last year were $168,997.

Lasater pointed out that the $490,000 increase in these non-cash charges for depreciation and amortization resulted primarily from the company's acquisition of over 1,700 miles of proprietary seismic data during the past year. This new data represents almost 75 percent of Flare's inventory for sale to oil and gas company customers.

"During the first quarter we continued to increase this inventory with expenditures of $3,047,251 for proprietary seismic data additions," he said, "compared with only $715,051 spent for this purpose in the first three months of the last fiscal year."

The increases in expenditures have required additional borrowings which result in higher interest expense. Such related expense for the first quarter of the new fiscal year was $187,930, compared with $53,335 for the three months ended September 30, 1981.

"Because Flare designs and markets products utilized by petroleum companies in their long-range planning for oil and gas exploration, we have been somewhat insulated from the periodic slowdowns that normally occur in oilfield operations," Lasater noted. "The severity of the current decline throughout all levels of the petroleum industry from producer to retailer has impacted every company associated with this business, and Flare has been no exception. As a result, we are experiencing a temporary slowdown in our growth in earnings."

He pointed out that because of the long-range nature of Flare's products, demand for them has remained strong even in a period of general industry decline. This strong demand and larger inventory enabled company revenues for the first quarter to increase over those of the same period in 1981, with cash flow up sharply.

WESTERN CO. OF NORTH AMERICA
(NYSE: WSN)

FORT WORTH (SWN) — The company has reported net income of $14,004,000, or $.32 per share for the third quarter of 1982, on revenues of $167,933,000. These compare with net income of $26,749,000, or $.60 per share on revenues of $192,121,000 in the 1981 third quarter.

For the nine months ended September 30, 1982, Western earned $54,505,000, or $1.25 per share on revenues of $542,837,000, compared with earnings of $73,894,000, or international offshore drilling unit. Western Oceanic, Inc., were the highest in its history. Its rig fleet is currently customer committed 96 percent for this year and 71 percent for 1983".

$1.06 per share, on revenues of $530,845,000 for the same 1981 period.

John A. Fanning, President and Chief Executive Officer, said, "Western's financial results for the quarter and nine months reflect the precipitous drop in domestic oil and gas exploration and development activity which has affected our petroleum services' revenues, plus substantially higher depreciation and interest expense compared with similar 1981 periods. Third quarter and nine month results for our

SUPERIOR OIL CO.
(NYSE: SOC)

HOUSTON (SWN) — The company announced that $100,000,000 of ten year Eurodollar Notes will be issued by its wholly owned Netherlands Antilles subsidiary, Superior Overseas Finance N.V.

The notes will be issued in the Eurodollar market through an offering managed by Morgan Stanley International and Credit Suisse First Boston Limited, and co-managed by various other European financial institutions. The notes, to mature on November 1, 1992, will be guaranteed by Superior Oil, and will be offered at par with an annual coupon of 11 percent. They may not be called for the first seven years.

The company will make application for the London Stock Exchange.

Washington becomes ambitious wine producer

By BILL CURRY
Los Angeles Times-Washington Post News Service

WOODINVILLE, Wash. — A year ago, when French Ambassador Francois de Laboulaye declared that a 1976 blanc de noir produced at a Washington state winery here was "first class, very enjoyable," his hosts thought the diplomat was being, well, diplomatic.

But then he found a 1980 Chardonnay only "very nice," and a reserve Cabernet Sauvignon a long time away, perhaps 90 years, from real achievement. Those less complimentary remarks assured local wine makers that they had indeed produced a world-class blanc de noir.

At a Washington state winery.

In only 15 years, the state of Washington has become one of the nation's most ambitious wine producers, the herald of a rapidly growing Pacific Northwest wine industry that hopes that an appellation such as "Columbia River" may someday stand with California's Napa and even France's Bordeaux as a mark of premium table wine.

It is a regional industry that has saturated its own market and is now moving out across the United States to compete with California on a growing scale. Washington state's boosters believe it may eventually serve 25 percent of the booming national market for better wines.

The dominant winery in Washington state is the U.S. Tobacco Co.'s Chateau Ste. Michelle. But 66 other wineries in Washington, Oregon and Idaho, wineries where the "chateau" may well be a garage, expect to compete as well. Increasingly, their products are being recognized as quality wines.

"Our reds are no better than California's," said Rob Griffin of Preston Wine Cellars in Pasco, Wash., which is owned by a former Ford implement dealer named Bill Preston. "But with a large number of whites, we do better."

A working wine maker with a degree from the University of California, Davis, Griffin is among the band of refugee vinters and vinologists from California who call themselves pioneers in this still-young Northwest industry. He came to Preston Wine Cellars in 1977, and at 29 he calls himself "one of the gray-haired old wine makers of Washington."

Preston's first crush of 30,000 gallons was in 1976, and this year's will be 120,000 gallons, a level that Griffin says will double in coming years.

"We're making wines equal to the best California boutique wines. Our whites are more outstanding," he said over a glass of Gewurztraminer, the kind of wine, he said, "that's going to go goose-stepping out of the Northwest and capture the marketplace."

With it will be an army of surprising wines produced by an eclectic array of wine makers: a dry Bartlett pear wine recommended by its former schoolteacher maker as "a fine hot tub wine," pricey Rieslings and Chardonnays and, increasingly, the Cabernets that some vintners hope will establish the region for its red wines as well as its widely acclaimed whites.

"In time," Griffin said, "the Pacific Northwest, the Yakima Valley, the Columbia Basin will have the kind of clout of Napa."

With this year's harvest now in press, the growth of the industry can be seen in the doubling of Chateau Ste. Michelle's capacity; the first crush at a large new winery owned by F. W. Langguth, a German concern, and in production increases at the region's other large and mom-and-pop wineries.

For example, Paul Thomas wines, which bills itself as the oldest winery in Bellevue, Wash., (1979), is producing 8,640 cases of four wines for 1982 and plans 17,800 cases of seven wines next year.

"It's coming of age," said Bob Betz of Chateau Ste. Michelle, here in Woodinville, which produces 250,000 cases of wine now and expects to reach 500,000 cases in 1985. "The wine market will perhaps double in the next decade. Where is that wine going to come from? In California the land is either not available or is prohibitively expensive. Washington state is going to become one of the prime fillers of that wine.

"With this harvest, Washington will entrench itself as the second-largest grape producer and next year the second-largest wine producer."

While California, the largest wine-producing state, accounts for 88.9 percent of the nation's wine, Washington state has seen its wine grape acreage grow from a few hundred acres to 8,000 acres in just a few years. And, by some estimates, as much as 250,000 acres could be planted.

Much of that land lies at the same latitude as Bordeaux and Burgundy. With hot summer days and cool summer nights, the grapes grown here achieve a desirable balance of sugar and acid.

"You've got to work real hard to make bad wine here," said Mike Wallace, 40, owner of Hinzerling Vineyards in Prosser, Wash.

Wallace, a former medical researcher who also studied wine making at the University of California, Davis, has produced $60-a-bottle wine and a blend in which he has the confidence of quality that allows him to jokingly label it "Ashfall White," after Mt. St. Helens. It features salmon on the label since, Wallace said, "everyone is always asking for a wine to go with salmon."

From his two-story cinder-block garage, he has also produced an award-winning 1979 Gewurztraminer made with selected clusters and a 1980 Riesling made with individually selected grapes that costs $30 a split.

This year's is his seventh crush from his 25-acre vineyard, a wine-making venture that began when he planted his first vines in 1972. "We were really a curiosity," Wallace said. "People came over to guffaw at us."

No more.

Now it seems that anyone with a few acres is planting vinifera grapes. In fact, in coming years, "a lot of people are going to have grapes that don't have a home," said Tom Thorsen, 31, general manager of Weinbaum Vineyards in Mattawa, Wash., "unless some major wineries come in. . . ."

The future also is clouded by the enormous investment required for vineyards and wineries. Vineyards may require $2,000 an acre in investment for each of the first four years before full production is reached, and U.S. Tobacco has poured $70 million into Chateau Ste. Michelle; it will take years to recover that.

Such costs explain, in part, the region's popularity thus far as a producer of white wines; they take perhaps 18 months to bring to market. Reds may take four years before the first sale is realized.

The Chateau Ste. Michelle winery is like one in California in every respect, wine tours, tastings and all. In fact, the region, wracked by an economic depression, hopes to build a second industry of tourism around its wineries, just as California has.

The region holds a special appeal for those seeking to build a wine reputation for the state and the region. "California is state of the art," said Thorsen, a research viniculturist from California State University, Fresno. "Up here, we're just a little past square one. You're just breaking ground. But it's going to do nothing but grow."

"I like to think it's going to be quite an industry," said Bob Moreman, a Pasco farmer who began with 20 acres of grapes in 1970 and now has 75 acres. "It looks like its going to be that way.

He said a friend recommended that he begin growing grapes. "Grapes didn't look too exciting then. Amateurs were the only ones buying. They'd call up for a few pounds and here you're sitting with tons! I was seriously thinking of taking them out."

Now he sells to the Worden winery in Spokane, which won two silver medals last June at the International Wine and Spirits Competition in Bristol, England, where Chateau Ste. Michelle also took five medals.

Ste. Michelle thinks those award-winners will find a home with the increasingly sophisticated U.S. wine-drinking public willing to spend $4 or $10 or more for a bottle of dinner wine.

"Washington wines will really fill that bill," said Betz of Ste. Michelle. "You've got 28 wineries striving to make quality wines."

CALENDAR

The Permian Basin Section of the Society of Economic Paleontologists and Mineralogists (PBS/SEPM) will sponsor a one-day field trip on Saturday, October 23.

The field trip, led by Dr. A. D. Jacka of Texas Tech University, will examine trassic point-bar deposits and Cretaceous reef-associated facies near Fluvanna, Texas.

Persons interested in attending are asked to meet at the intersection of FM612 and FM1269 in Fluvanna at 9:00 a.m. Saturday, October 23. From Midland, take Highway 20 to Big Spring turn northeast on State Highway 350. After 2 miles turn north on DM669 and follow this about 40 miles to the intersection of US180 in Gail, Texas. Turn East on 180 for 9 miles to the intersection of FM612, then turn north on 612 for 8 miles. Remaining on 612 turn east for another 9 miles to Fluvanna and the intersection with FM1269.

Participants are encouraged to bring boots, sack lunches, water, collecting equipment, and a camera.

For more information please contact SEPM at (915) 683-1573 or Dr. Jacka at (806) 742-2982.

The PBS/SEPM announces that Dr. Richard J. Jordan will address the Society's noon luncheon on Tuesday, October 19, 1982.

Dr. Jordan's talk will be on "Geomorphic Principles and Unconformity Analysis related to the Permian Basin," and is set for 11:30 a.m. at the Midland Center.

To register or obtain more information please contact SEPM at (915) 683-1573.

The Permian Basin Section of the Society of Petroleum Engineers (SPE) will hold its regular monthly meeting on Tuesday, October 19, 1982, at the Ranchland Hills Country Club, Midland.

This meeting will begin at 5:30 p.m., with a social hour, followed by dinner at 6:30 p.m. Immediately following dinner a speech will be given by Mr. Robert L. Maby, Jr. He is an SPE Distinguished Lecturer for the 1982-83 year.

Maby will survey Middle East oil activities focusing on 11 Middle Eastern countries.

Maby, recently retired from ARAMCO, has worked as a geologist and petroleum engineer in Saudi Arabia for the past 28 years.

The Permian Basin Well Logging Society of SPWLA will hold its meeting on October 21st at the Midland Country Club. The meeting is scheduled for 11:30. The speaker is Joe Hastings from ARCO. He will be speaking on the Need for Energy Alternatives.

The Petroleum Accountants Society of the Permian Basin will hold its regular monthly meeting October 20 at Ranchland Hills Country club.

The technical session will begin at 5:15 p.m. and will be presented by the Education Committee.

The dinner speaker this month will be Steve Brown, founder of International Research Group, a company formed to locate missing royalty and mineral owners.

Brown is a 1959 graduate of Midland High School and spent 12 years in FBI. He has used his investigative skills for the petroleum industry to locate over 600 missing owners, or their heirs, finding them in all 50 states and several foreign countries.

He will speak on his life in the FBI, which included duties surrounding the Patty Hearst kidnapping, and on his investigative work in the petroleum industry since then.

RRC authorizes pipelines

AUSTIN — Railroad Commission chairman Jim Nugent has announced that 23 permits to operate new pipelines in Texas were granted by the RRC in September.

Through the first nine months of this year, the Commission has issued 137 permits to operate new lines. For the same period last year, 128 permits were approved.

Fifteen of the permits in September were for gathering pipelines, four were for truck transmission lines, and another four were for multi-purpose of other types of lines. Gathering lines bring oil and gas from production leases, while a trunk transmission line is a larger diameter line into which smaller lines connect.

Nineteen of the newly-permitted lines will transport gas, two will move crude oil, and aother two will transport other materials.

Private pipelines accounted for all the permits last month.

In September, six permits were granted for lines in East Texas, three each in Southeast Texas, West Central Texas, and the Refugio and San Angelo areas, two in North Texas, and one each in East Central Texas and the San Antonio and Midland areas.

Loeffler honored, endorsed

Representative Tom Loeffler (D-Texas) has earned the "Guardian of Small Business" Award — and an endorsement for re-election — from the National Federation of Independent Business (NFIB) for his outstanding voting record on small-business issues.

The nation's largest small-business group presented Loeffler with the award because he voted with a majority of NFIB members 95 percent of the time.

On announcing the award, NFIB President Wilson S. Johnson said, "the voting record of Rep. Loeffler this Congress demonstrates that he is responsive to the needs of his state, because small businesses create the majority of new jobs and if left to flourish, will be a major factor in restoring economic growth."

House members were rated on 22 recorded votes during this session of Congress. Issues ranged from cutting the budget to raising unemployment taxes and forcing the government to pay its bills on time. Those members of Congress who did not have recorded votes on at least 70 percent of the issues included in the ratings were not eligible for the award.

NFIB is a non-profit, non-partisan organization representing 45,622 small-business owners in Texas and more than a half-million independent businesses across the country.

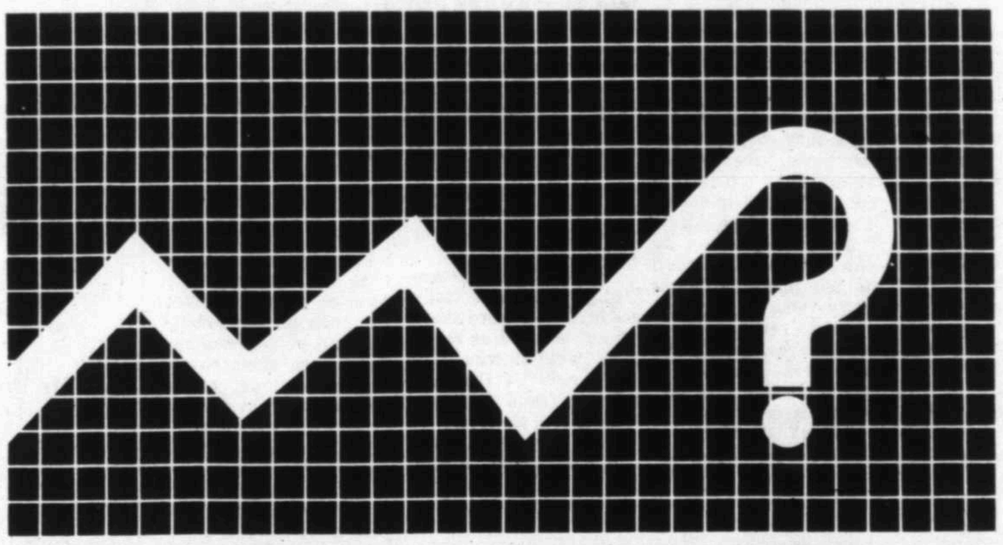
Investment Uncertainty?


WITH A FIRST NATIONAL 6-MONTH CERTIFICATE, YOU CAN BE CERTAIN OF YOUR INVESTMENT.
The interest rates on money funds may appear higher going in, but there is no way to be certain what the rate may be at the end of the month, or even the next week!
At The First National Bank of Midland, the interest rate on a 6-Month Money Market Certificate of Deposit is assured for the entire 182 day term, as long as you maintain your deposit.
Current Rate
9.150%
This is an annual rate and is subject to change at renewal. Federal regulations prohibit compounding of interest during the 182 day term and require that the penalty for early withdrawal be collected from the principal if the prescribed penalty period has not been met. The interest rate changes weekly and the current rate is in effect through October 18, 1982.
INSURED SECURITY.
An investment of $10,000 or more in a First National 6-month CD is secure in the hands of an experienced investment manager and is insured by the FDIC.

Bill M. Burks, formerly of Midland, has been named president of Reading & Bates Petroleum Co., headquartered in Tulsa, OK, following the retirement of I. J. Pierce.

Burks attended Midland High School and is the son of Mrs. Olive Stanley of Midland.

He has been executive vice president of Reading & Bates Petroleum since January 1981. He joined the company in 1963 and in 1968 became manager, production and engineering. In 1972 he was named vice president of Reading & Bates Corp., the parent company.

He is a 1961 graduate of the University of Oklahoma.

J.D. Birdwell was presented with his 35-year service award and his 35 year safe worker award at the Denver City Semi-Annual Safety Meeting of Atlantic Richfield Company.

Birdwell began working for the company in 1947 at Denver City, Texas. He began as a roustabout and has also worked as a truck driver, a pumper, and a gang pusher. From 1953 until 1956, he worked in the material section, then as a gang pusher for a few months and then as a pumper again from 1956 to 1964, when he returned to the materials section where he is at this time, as a Material Expeditor Leadman.

C.E. Cardwell Jr. vice president and manager of the Permian District, ARCO Oil and Gas Company, was recently presented a 35-year service award by J.A. Middleton, Sr. vice president, Dallas, at a luncheon given in Cardwell's honor.

Cardwell received a mechanical engineering degree from Auburn University and began work for ARCO in Dallas in 1947. He held positions of increasing responsibility in Dallas, Tulsa, Denver, and Midland. He became vice president of ARCO in 1979.

Susan Cockrell, a specialist in new business development and commercial design, has joined the Midland firm, St. George's Interiors.

A native of Snyder, she holds a B.S. in European History and English Literature from the University of Texas at Austin, and a B.A. in Interior Design from Georgia State University, Atlanta, Georgia. She has also completed the majority of a Masters of Art Degree in Interior Design from Georgia State.

She has been involved in commercial, residential and restoration projects in Atlanta, Georgia, and in Dallas, Denton, Lubbock and Midland. She is an associate member of the American Society of Interior Designers.

Debra J. Parmer has been promoted to accounting services coordinator of the Elcor Corp. She will be responsible for coordinating outside financial reporting, tax-related matters and other financial accounting issues.

Prior to joining Elcor in 1981, she was employed by Coopers & Lybrand in Austin, Texas, as a senior auditor. She received her B.B.A. in Accounting from Texas Tech University in 1978. Ms. Parmer is a member of the American Institute of Certified Public Accountants, Texas Society of CPAs and the American Society of Women Accountants.

Jim Monk has joined Stimwell Services Company as general sales manager. Stimwell is an acidizing and fracturing company based in Midland, with field offices in Andrews and Crane. Monk was formerly with Tom Hansen Co. Inc. and The Western Company.

Rob Bratcher has been named Area Salesman for Stimwell. Bratcher was formerly with Tom Hansen Co. Inc. and The Western Company.

Rees Dabbs has been named president of Tiger Charter Corp., located at Midland Regional Air Terminal.

He is a six year veteran of the U.S. Air Force, and holds a B.A in Business Administration from The Citadel in 1973 and a MBA. He has more than eight years of experience in aviation and was previously Tiger's vice president-marketing.

Harvey H. Mueller has been employed as a petroleum Engineer by Bass Enterprises Production Co. Mueller received his B.S. in Petroleum Engineering from Texas A&M University in May, 1982. He is a member of the Society of Petroleum Engineers and Pi Epsilon Tau.

Neil M. Sullivan, formerly of Midland, has been named manager of exploration operations in the San Antonio headquarters of Valero Producin Co.

He joined Valero after serving as vice president of southern region exploration for Anadarko Production Company in Houston.

His previous assignments included service as a district geologist for American Trading and Production Company and as an exploration geologist for Bass Enterprises Production Company and Continental Oil Company, all in Midland, Texas.

A native of McKeesport, Pennsylvania, Sullivan received a BS in Geology from Dickinson College, Carlisle, Pennsylvania, in 1970.

Carl Curtis, manager of Wall Street Moving Center, 2803 West Wall Street, in Midland, has received a merit award from U-Haul International.

U-Haul has established a recognition program for top managers who have shown outstanding service to local businesses by providing them with rental trucks and trilers. Curtis provides service to over 40 such businesses who need extra vehicles to meet delivery demands.

John Tutt has been transferred to the Midland office of the Production Operators Inc. as area sales representative. Tutt previously served as area sales representative in the company's Gulf Coast area, Houston, Texas.

Roger Alexander has been promoted to Landman II in the West Texas District of TXO Production Corp. effective October 16, 1982. He joined TXO as a landman June 1, 1981. He received a B.B.A. in Petroleum Land Management from Norman, Oklahoma in 1981.

Randy Click has been promoted to Landman III in the West Texas District of TXO Production Corp., effective September 16, 1982. He joined TXO as a landman February 23, 1981. He received a B.B.A. in Finance from Texas Tech University, Lubbock, Texas in 1976.

Susan Elizabeth Simmons has joined the Tommy Cantrell Appraisal Company and will be assigned to the corporate office in Lubbock.

Simmons is a Midland native and a graduate of San Marcos Academy. For several years she was a partner with her mother, Geraldine D. Simmons, in Diversified Business Assistance in Midland.

William D. Edman of La Habra, California, has been appointed division production manager of Chevron U.S.A.'s Mid-Continent division in Midland.

Edman's administrative, field and plant responsibilities will encompass portions of nine Mid-Western states: Texas, Oklahoma, New Mexico, Arizona, Arkansas, Missouri, Nebraska and Iowa.

He joined Standard Oil Company of Texas in 1964. His career with Standard Oil and Chevron U.S.A. reflects positions held in Texas, Australia and California.

He has a M.S. in Petroleum Engineering from Texas A&M University.

Tex Blankenship was presented with a 20-year service award at the Semi-Annual Safety Meeting of the Atlantic Richfield Company. The award was a ring with an emerald.

Blankenship began working for ARCO Oil and Gas Company September 25, 1962 as a roustabout at Healdton, Oklahoma. He was transferred to the Coahoma area May 1, 1965, as a roustabout. He is presently a roustabout in the Coahoma area.

PBGC begins new classes

The Permian Basin Graduate Center will offer the following courses at the PBGC Building, 105 W. Illnois, Midland.

"Drilling fluids and mud types" Introduction to Oil Well Drilling and Completions meets Wednesday, Oct. 20, from 7-10 p.m. David Havis, IMCO Services, A Division of Halliburton, Houston, will instruct. The fee is $30.

"Rules and regulations: federal, state (Texas & New Mexico) and university lands" in Principles of Land and Leasing, meets Thursday, Oct. 21, from 7-10 p.m. Fee is $25.

"Geophysical Assistants Workshop" will meet Monday through Thursday, October 25-28, from 7-9:30 p.m. Edwin C. Woodruff, Consulting Geophysicist, and Troy Rodden, Seismic Analyst, North American Processing, will instruct. This is an introductory course for beginning and intermediate level geophysical technicians. Fee is $125.

"Open Hole Log Interpretation — Theory and Analysis" will meet Tuesday through Friday, Oct. 19-22, from 8 a.m. to 5 p.m. Jim Brock will instruct. This course is for geophysicists, geologists, petroleum technicians, reservoir engineers, and anyone with a basic understanding of petroleum geology or involved in evaluating wells. Fee is $450.

For registration or further information call 563-2311.

Farm unity urged

KERRVILLE (SWN) — Agricultural interests should band together and develop a platform of land, financial and market policies for the American farmer, the president of a leading herbicide company said Friday.

Richard J. Mahoney, president and chief operating officer of St. Louis based Monsanto Co., told a gathering of executives of agricultural cooperatives that their organizations "are uniquely suited to take leadership in articulating their industry's wishes, to lobby for them and marshal allies to encourage adoption of those policies.

"Farmers and farm groups are speaking out today," Mahoney said, "but all for their own parochial interests of corn, tobacco, milk, peanuts — or for problems which mainly affect their state or region. There is no single message on issues of national importance."

He told the co-op executives that if they do not focus on national policies and goals for the American farmer, the resulting "mishmash of narrowly defined regional wants will be easily divided up by a largely unsympathetic U.S. public and Congress."

Mahoney also noted that although less than 3 percent of the U.S. population lives on farms, the potential allies for the agricultural sector is vast.

"When you add up the chain of people that farmers buy from and sell to, they have a big impact on our economy. Looked at this way, agriculture is the number one employer in the nation, 15 million people.

Credit cards counterfeited

By KATHLEEN KERR
Los Angeles Times
Washington Post
News Service

"Plastic money" has led to plastic crime. Instead of printing phony greenbacks, counterfeiters are embossing fake orange, blue, and gold bank credit cards that will cost those companies millions of dollars this year.

The modernization of money — 116 million Americans use VISA and MasterCard charges — has resulted in new scams that will double card fraud losses for credit companies from $20 million in 1981 to $40 million in 1982, according to The International Association of Credit Card Investigators.

Companies like MasterCard, which recently hired a former FBI assistant director as vice president of security, have pumped up efforts to minimize losses — part of which are passed on to consumers in the form of annual fees by banks. Through development of new types of cards — including some that require electronic validation — credit companies hope to make them fraudproof.

"Counterfeiting of credit cards is a growing problem," said Dick Rossi, spokesman for VISA in San Francisco. "A lot of it seems to be centered in New York. It could be that there are more people doing it or that the counterfeit rings are more sophisticated."

The scams are as diverse as the plastic cards in a shopper's billfold, but all have the same objective — to obtain bona fide card numbers. The counterfeiters obtain the numbers either by copying them as card holders make purchases or by going through discarded credit bills. In some cases, merchants and clerks furnish the counterfeiters with lists of credit card numbers and blank sales receipts.

The basic operation is as follows: Using a $3,000 embossing machine, the counterfeiters imprint the numbers on white plastic or on stolen cards that have been flattened. They use the cards to print phony purchases on the blank receipts. Then a merchant sends the receipts to credit companies for reimbursements for purchases that were never made. A variation on the scam is to purchase items with counterfeit credit cards that bear legitimate numbers, and then resell the items for profit. Consumers whose cards bear those copied numbers are unaware of what has happened until they find they have been charged for purchases they did not make.

"Some of these organized groups have actually made a credit card that's almost as good as real," said David Downs, who manages Citibank's national fraud investigations unit in Melville, N.Y. "And if they take a stolen card and reimboss it with a good number, it's almost impossible for a clerk to detect."

OIL FACTS

Lyne T. Barret drilled Texas' first oil well near Nacogdoches in 1866. The state became the nation's number one oil producer in 1928.

All OPEC members account for 1,020 trillion cubic feet of gas reserves, or 35 percent of the world's total, says the Oil and Gas Journal.

We need one minute of your time to point out a very important service that we offer: The TEMPORARY RESOURCES PAYROLL PLAN.

Has your company cut back on personnel? Are your employees overworked? The extra office staff needed can complicate personnel functions with such things as:

1. Benefit Programs
2. Medical & Insurance Registrations
3. Filing of State & Federal TAXES
4. UNEMPLOYMENT CLAIMS

. . . and any other hidden costs you might assume from processing the employee yourself.

THE SOLUTION? Let Temporary Resources assume your payroll responsibilities.

ADVANTAGES:

1. Billed on one itemized statement
2. Extra discount when you send us the employee
3. No W-2 Forms at year end
4. Employees are paid on weekly basis
5. Billed for actual hours worked
6. Your accounting department has NO EXTRA work load
7. No hidden costs
8. Covered by *our* Workman's Compensation.

YOUR employee on **OUR** payroll at a nominal cost!

INTERESTED? CALL BARBARA, KAREN or PATRICIA at **684-0527.**

New custom apparel firm opens in Midland

John Philbeck has announced the creation of a new men's custom apparel firm, Philbeck's of Midland.

Philbeck has been in the clothing business since 1969, active in both Tulsa, Oklahoma, and Midland. His education started with double majors in Marketing and Business Administration from Northeastern Oklahoma State University. His practical application of fit, style and personalized color analysis was developed in Tulsa, where he worked for a custom apparel firm from 1973 to 1976 before moving to Midland.

In Midland, where he was with a local custom apparel firm for three years, he developed the Midland-Odessa market, a new store in Lubbock and business in the eastern part of New Mexico.

Before establishing his new clothing firm, Philbeck traveled to all parts of the country to find the finest tailoring houses to build his garments. He interviewed the owners and tailors of most of America's finest firms.

"I narrowed my list down to about four houses and then went back to visit them again. I decided on two — one is in Baltimore, Maryland; the other is in Rochester, New York. Later, when I asked people in New York what were the best tailoring houses, the names of these two firms came up again and again," Philbeck said.

These "cut, trim and make" houses specialize in fine handmade garments. There is more hand work in these garments than is available in "ready made" garments, he added.

Philbeck plans a European buying trip later this fall to hand pick fabric from the finest mills in Scotland, England, Italy and other countries. Because of his buying techniques, his pieces will be very competitive with the medium to upper price range of "ready made" suits, sport coats, shirts, slacks and accessories, he said.

Philbeck said he has a lot of confidence in his company because, with the financial backing he's received locally, he's able to conduct his business in a manner conducive to Midland's standards. In the future, he foresees the business and professional men of Dallas, Houston and other influential cities of Texas coming to Midland to shop because of improving shopping possibilities here, he said.

He cites four advantages to having a custom clothier. The first is having an unlimited selection of fabrics unlikely to be duplicated.

The second is being able to have a personalized garment made to meet one's needs. "I build a garment to a customer's specifications. It's similar to building a house," Philbeck said. "If you want a western cut, contemporary styling, traditional clothing, European cut or high fashion, it's no problem," he said. For example, he is currently supervising the creation of a country-western tuxedo requested by a client, he said.

The third advantage to having a custom clothier is having professional guidance. "Everyone has a certain banker, lawyer, accountant or physician that knows them personally. They receive sound advice that is tailored to their specific needs." he said. "It's only logical that they receive the same professional consideration from their clothier."

Finally, for shopping efficency, Philbeck keeps records of a client's measurements for future orders, and records the fabrics selected and what is already in a man's wardrobe. He also makes house and office calls for client convenience, bringing an extensive selection of fabric swatches with him. Clients may come to his office to avail themselves of a much larger variety and selection from bolts of cloth if they desire.

In the next few months he plans to open a custom apparel store which will feature hundreds of bolts of imported cloth, as well as personnally selected accessories.

Philbeck said he treats each client's particular "look" with the tenacity of a football coach.

Lexington Inn offers special rate

DALLAS — Lexington Motor Inns is offering a special "construction" rate of $28 a night at its Midland property during current renovation activities, it has been announced by Joe Faulk, president.

"The Midland facility will be our flagship property for the future when our $7 million renovation and expansion project is completed," said Faulk. "While construction is underway, creating slight inconveniences, we want our guests to enjoy a special rate on our executive suites."

When construcion is completed in December 1982, the property will have 310 rooms, almost double its current size. All existing suites are also being completely renovated and upgraded.

Reservations can be made by calling 915-697-3155 in Midland, or out toll-free lines 800-527-1877 (outside Texas) and 800-442-7682 (in Texas).

The Lexington Motor Inn in Midland is located at 1003 S. Midkiff. Another Lexington Motor Inn is located in nearby Odessa at 3031 E. Highway 80.

WTSU hosts wind power meeting

West Texas State University's Alternative Energy Institute will host Wind Energy Expo '82 and National Conference Oct. 24-27.

Wind Energy Expo '82, located at Amarillo's Quality Inn, will attract more than 200 members of the American Wind Energy Association, exhibitors and manufacturers of small wind energy conversion systems and wind turbines and persons interested in wind energy as an alternate source of energy.

The national conference will open on Sunday, Oct. 24, with a pre-conference workshop, "Introduction to Wind Energy," presented by researchers of WTSU's Alternative Energy Institute.

From 1:30 p.m. to 2:45 p.m., Dr. Earl Gilmlore, a research associate with AEI, will discuss wind characteristics. Dr. Vaughn Nelson, director of the Alternative Energy Institute and a WTSU professor of physics, will discuss wind energy conversion systems at 3 p.m.

The workshop, which will be in the Seminar Center of the Quality Inn in Amarillo, is for persons with a limited background concerning wind energy and persons who are considering the purchase of a wind turbine for residential or farm use. Sessions will describe wind characteristics, estimation of energy production and potential and wind systems. Participants will receive brochures developed by AEI and the 45-page "Guide to Wind Energy in Texas."

Persons registering only for the workshop will be charged $20.

Nelson and Gilmore have been involved in wind energy research since 1970.

Nelson developed and teaches a course, Wind Energy and Wind Turbines, at WTSU.

Registration for the conference will begin at 6:30 p.m. on Sunday, Oct. 24. Conference fees, which include presentation and a bus tour to the USDA test and research site at Bushland, are $75 for members of the American Wind Energy Association, $85 for nonmembers and $25 for students.

On Monday, Oct. 25, participants will attend presentations from 8:30 a.m. to 5 p.m. and an awards banquet at 7:30 p.m. The schedule for Tuesday, Oct. 26, includes presentations from 8:30 a.m. to noon, a tour of the USDA test site at Bushland from 1:15 p.m. to 5 p.m. and a slide and film presentation at 7 p.m.

The conference will end Wednesday, Oct. 27, with presentations from 8:30 a.m. to 11:30 a.m. and an AWEA membership meeting at noon.

Interested persons may preregister by making checks payable to the American Wind Energy Association and mailing fees to Alternative Energy Institute, Box 248, WTSU, Canyon, Texas, 79016.

Co-sponsors of the conference are the USDA, Texas Solar Energy Society and the Panhandle Solar Society.

Tipperary shares big gas find

Tipperary Corporation of Midland announced Friday its participation in a 32,000,000 cubic feet per day gas discovery in Loving County. The Number 1 Linebery had a calculated open flow potential of 32 MMCFD of gas through perforations from 15,796 to 15,840 in the lower Atoka formation. The test was conducted through various choke sizes from 3/64 inch to 11/64 inch.

Tipperary owns a 5.25 percent interest in the well and the surrounding 11,861 acres. ATAPCO, the operator, has commenced tests of the Upper Atoka formation in the same well. In addition, Tipperary et al. are drilling a 20,000 foot offset to test the Fusselman formation.

JIM SERVATIUS, EDITOR

Clements and Bentsen

Two of the most important races on the Nov. 2 ballot in Texas will be those for governor and United States senator. The obvious choices are the incumbents, William P. Clements Jr. and Lloyd Bentsen.

Governor

Elected four years ago as the first Republican governor in the Lone Star State since Reconstruction, Bill Clements already has made an indelible mark on the politics and lifestyle of Texas. His guidance has helped Texas prepare for the anticipated heavy influx of people, which already has begun.

With another four years, Clements can continue programs and planning that will make the transition into the 1990s and the year 2000 much smoother. By the year 2000, Texas is expected to double in population. If that prediction comes to pass, the state's leaders serving at this time will need to have exercised mature judgment and extraordinary foresight.

Clements possesses both qualities and has illustrated that fact time and again as he has dealt with the major issues of illegal immigration, economic development and water resources. He has handled these issues and a multitude of others in a most commendable manner.

Bill Clements has been good for Texas and good for Texans. He should be re-elected.

U.S. Senator

Since his election to the U.S. Senate in 1970, Lloyd Bentsen has proved many times over that he is far from the Democratic liberal politician painted by his opponents. A political moderate, Bentsen has since become a driving force for economic stability.

Bentsen became chairman of the Joint Economic Committee in 1979 and has given that body a sense of economic direction it lacked prior to that time.

In addition to his efforts on economic matters, Bentsen has worked diligently for the deregulation of natural gas and to reduce the governmental burden on small producers and royalty owners. Those certainly are not the marks of an economic liberal.

Sen. Bentsen has been an effective spokesman for those in Texas who are tired of the wasteful social spending practices that created the economic mess the nation is in today.

The senator should be re-elected for another six years because the job of untangling the economic mess in Washington has only begun. The people of Texas — and the nation — should not be deprived of his expertise and experience.

County, district races

Seven Midland County, U.S. Congressional District and state district races will be decided by voters on Nov. 2. Following is a summary of The Reporter-Telegram's choices in the various races.

Congress

Effective Jan. 1, 1983, voters in Midland County will become a part of the 21st Congressional District. Midland County now is a part of the 19th Congressional District.

Since 1978, the 21st district has been represented by U.S. Rep. Tom Loeffler of Hunt. The Republican congressman distinguished himself early in his career, fighting to bring about a reduction in government spending and to make the United States strong again from an economic standpoint. Loeffler's experience in the House during these difficult economic times will make him even more valuable in future years.

A number of area readers to the north of Midland remain in U.S. Rep. Hance's 19th Congressional District. Hance, who entered the Congress in 1978 along with Loeffler, quickly established himself as a leader, being involved with the writing of major legislation, including the Conable-Hance tax cut bill, which was signed into law in the summer of 1981. He should be returned to Washington for another term.

State Senator

Ernest Angelo is no unfamiliar name to Midlanders, having served as the Tall City's mayor for eight years in the 1970s. As senator of Texas' 25th District, we believe Angelo will provide a clear and effective voice for all the district's residents.

Political contacts Angelo developed while Midland's mayor and since undoubtedly will prove invaluable in the state senate. He should be the voters' choice on Nov. 2.

Education Board

J. Murphy Horton, a Midland petroleum geologist with a deep interest in education, is a candidate for District 21's representative on the State Board of Education.

Horton, who believes he can use his position on the board to influence policy changes that will benefit schools and education with better paid teachers, more stringent discipline requirements and a better selection of textbooks, contends that "school is nothing but a mirror reflection of society as a whole." He wants to make school better to make society better and we believe he deserves the opportunity.

District Clerk

The race between Madge B. Wallis, the incumbent Democrat, and newcomer Vivian Wood for the district clerk's post presents a difficult choice. Mrs. Wallis has held that post since 1974 and has been involved in a number of changes that have proven most beneficial, not the least of which was the 1975 change to computerized jury panel selection.

But challenger Wood, a former deputy in the district clerk's office, has some sound ideas about personnel management and streamlining and improving the office's functions.

Faced with such a choice, The Reporter-Telegram endorses Mrs. Wallis's candidacy based on her experience in the office.

Justice of the Peace

Robert H. Pine has been justice of the peace in Precinct 1, Place 2 for 18 years. He has consistently performed the duties of that important office in a fair and equitable manner.

The Reporter-Telegram believes Judge Pine's expertise should not be lost to residents of Midland. He should be re-elected.

Commissioner

The most difficult race for The Reporter-Telegram's editorial board was that for county commissioner of Precinct 2. That position is now held by Democrat Charlie Welch who is being challenged by C. Wallace Craig, a Republican. For this position, The Reporter-Telegram makes no endorsement.

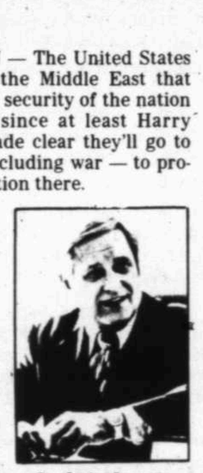
Welch has performed his duties with genuine concern, we believe, and with the best interests of the Midland County residents he represents at heart. We realize his opinionated stance on issues has made him controversial at times and placed him in an adversary role in relation to some city officials as well as other commissionrs. We are not sure that is all bad.

Craig's selection, on the other hand, undoubtedly would smooth the operation of the commissioner's court. Serving on the Midland Independent School District board for six years and currently as MISD's representative on the Midland County Tax Appraisal Board, Craig has exhibited mature judgment and fairness. He is highly respected in the community.

WASHINGTON MERRY-GO-ROUND

Secret documents indicate Israel's clout

WASHINGTON — The United States has interests in the Middle East that are so vital to the security of the nation that presidents since at least Harry Truman have made clear they'll go to any lengths — including war — to protect the U.S. position there.



Jack Anderson

That was the reason for organizing the Rapid Deployment Force. Unfortunately, the Rapid Deployment Force is neither rapid nor deployable yet. So the United States has had to depend on surrogates to defend our interests in the Middle East.

That led to U.S. support for the late shah of Iran. It's now the strategy behind U.S. military aid to Egypt.

But when all's said and done, the strategists realize there's only one military force powerful enough to block Soviet designs upon the Middle East. That's the Israeli Army.

This is a major reason (along with domestic political considerations) why American presidents have tended to bite their tongues when Israel pursues courses that are not exactly to the White House's liking.

President Reagan has decided, for example, against "disciplining" Israel by cutting off U.S. arms deliveries, though he may decide to slow down the flow a little.

The ease with which the Israeli tail has wagged the U.S. dog over the years is made clear in highly classified documents that have been shown to my associate Dale Van Atta. The documents are locked in the vaults of the CIA, the Pentagon, the State Department and the White House itself.

They reveal the serene self-confidence that successive Israeli governments have displayed in their dealings with the United States over arms supplies. Indeed, some high officials have given the Israelis grudging praise for the way they have bent U.S. administrations to their will.

For example, one set of top-secret documents reveals that for several years after the so-called Yom Kippur war of October 1973, the United States had no idea of the extent of Israeli arms purchases. Finally, a high-level group was put together to dig out this information.

The task force pulled together "the many threads of Israeli operations in the arms transfer area, and the total picture indicates just how well-organized their system is — and how little we have understood, let alone controlled, what has happened in the past," according to a top-secret document.

The Israeli plea has been that they need U.S. weapons to offset the Arabs' overwhelming military advantage. This has been successful even though U.S. military analysts have ridiculed the claim.

For example, before the Israeli invasion of Lebanon in 1978, the U.S. experts said Arab capabilities had "fallen" and Israeli capabilities were "up." Their analysis concluded, correctly: "There is no question that the Israelis would win." The same assessment was made in the month before the Israelis' invasion of Lebanon last June, rendering ludicrous Defense Minister Ariel Sharon's complaint to Washington just before the attack that Israel needed more arms to defend itself against the Arabs.

Past minutes of a secret meeting of the National Security Council show that U.S. officials have not been fooled by the Israelis' poor-mouthing. Those present "generally agreed that there is no military rationale for the Israeli arms requests, and that they should be considered primarily in the political context." The minutes reveal that both the CIA director and the Joint Chiefs chairman "agreed that the additional goodies in hardware would not change the picture at all."

Yet the Israeli requests were always granted, and high-level officials were assigned to see whether Israel's arms shipments could be speeded up, making other nations wait.

According to an earlier secret report, Prime Minister Yitzhak Rabin at one point told Secretary of State Henry Kissinger that "in order to get Israel into the line early, he would be prepared to make his desires known up to five years in advance." The offer was declined.

One top-secret State Department report shows how commonplace the Israelis' pleas for speedy delivery had become. Commenting on a cable from Tel Aviv, the report said Israel had complained "that delivery of weapons has been slowed, either through bureaucratic bungling or by deliberate policy — and asks which, along with the usual demand for quicker response."

The high cost of expedited delivery never seemed to bother the Israeli government. For example, according to one approved arms list, accelerated delivery of hundreds of Sidewinder air-to-air missiles doubled the price to more than $100,000 apiece. One reason for Israeli insouciance in this respect may be that a big share of their arms purchases are written off by the U.S. government — some $6 billion worth since 1970.

The Israeli influence may have peaked, though. Even before the latest Lebanon invasion, a high-level Pentagon official wrote in a top-secret report that Israel's clout in Congress was "slipping badly." He speculated that this was due "to a weary state of mind over the Israeli lobby (and) an enhanced understanding of the necessity for an even-handed policy in the Mideast."

The official added: "I am optimistic that we may have turned the corner in our special relationship with Israel. United States interests may be first for a change."

(c) 1982, United Feature Syndicate

GEORGE F. WILL

Germany's politics keeping U.S. worried

WASHINGTON — If earth's beauty is but a breath and man is but a shadow, if all flesh is as grass, why such anxiety when Germany's governments do not last forever? Because, as Bismarck said, God put Germany in the middle of the house, and Europe's house has been unlivable when Germany has been unsettled.

George F. Will

The Federal Republic is only 33 years old. Its politics have been agreeably bland. An American axiom is that healthy politics take place within the 40-yard lines, never surging far from the center. Postwar German politics have been like that. Another axiom is that in the healthiest democracies two major parties go from opposition to governing with metronomic regularity. Germany's political metronome has now ticked for the third time in 33 years. The first tick was in 1949, when the Christian Democrats took control with Konrad Adenauer. The second was in 1969 when the Social Democrats and Willy Brandt came to power. An average of one tick every 11 years does not constitute wild oscillation.

In his elegant history, "The Germans," Gordon Craig says that Adenauer was "the first statesman who was able to overcome the unconscious tendency of his countrymen to believe that leaders could only be taken seriously when they wore uniforms." The new chancellor, Helmut Kohl, is a German Jerry Ford: not a man on horseback. The immediate cause of his coming to power is reassuringly recognizable — the malfunctioning of a welfare state's economy.

But to a wary world, Germany is ominous even — especially? — when normal. Perhaps normality is abnormal; perhaps outward calm is achieved only by ruthless repression of national traits which grow in strength when submerged and must eventually burst forth with redoubled strength.

Unfair? Almost certainly. And yet....

"The 20th century," writes Hugh Thomas, "should have belonged to Germany." It began with Germany sitting in a strategic position, on vast natural resources, with a growing population gifted in every sphere of modern life — culture, medicine, science, military affairs. But in the century's ninth decade, Germany is divided; even East Germany's eastern border is, in places, west of where Germany's frontiers were in the 12th century; and there have been nearly four decades of war-crimes trials, which continue.

Bonn, the provincial town that still seems a merely provisional capital, symbolizes the fact that the continuity of the German state — the idea of Germany — is still at issue. There is a sense, as Henry Kissinger has written, that the Federal Republic is "like an imposing tree with shallow roots, vulnerable to sudden gusts of wind." If the wind is rising, that is because through all its postwar life Germany has been, as Kissinger says, "an economy in search of political purpose."

Germany's slight shift to the right this month under the Christian Democrats may be much less significant than the probable lurch to the left by the Social Democrats in opposition. Helmut Schmidt was impatient with his intellectual inferiors, who included most of the persons he had to deal with. He was not an ideal ally. He seemed to believe there is no alternative to detente — a belief that makes detente untenable. But he tried to hold his party, against its growing inclination, with the West. His departure may mark the exhaustion of socialist (or Social-Democratic) anti-communism in northern Europe.

Parties of the left no longer furnish forth the likes of Ernest Bevin, foreign secretary in Britain's postwar Labour government. The next time Germany's political metronome ticks, the Social Democratic Party that is returned to power may be sunk in anti-Americanism and neutralism.

Adenauer, a Catholic Rhinelander, thought of "the West" as a cultural tradition extending back to Charlemagne. Germany was weak and Adenauer welded it to the Atlantic alliance. Today, German nationalism, on the left and the right, may seek expression in a Bismarckian policy of maneuvering between East and West.

United States power, including U.S. troops in Europe, gives Germany the base which enables Germany to negotiate with Moscow. So the United States is in danger of being the indispensable ingredient in a policy inimical to U.S. interests. Congress, desperate to find alternatives to economizing at the expense of domestic programs, is watching. If Congress concludes that U.S. power is an umbrella in the shade of which the weed of neutralism flourishes, the umbrella might be snapped shut with reckless haste. Then Germany, more vulnerable than Bismarck's Germany ever was, would be left with Bismarckian policy, and no Bismarck.

ART BUCHWALD

Don't invite wrong man to White House!

I was sitting in Lafayette Park facing the White House when an unshaven man in a rumpled suit, and no shoe laces, sat down next to me, and looked hungrily at my lunch.

Art Buchwald

"Would you care for a bite?" I asked.

"If it isn't too much trouble," he said, "I'm unemployed, as you can probably gather."

"I'm sorry to hear that," I said sincerely. "Where did you work?"

He pointed to the White House. "Over there."

"I didn't know the White House was laying off people," I said.

"Ordinarily they aren't. But they made an exception in my case. I was the guy who invited Gary Arnold to attend the president's pep rally in the East Room for congressional candidates."

"Gary Arnold? You mean the fellow who started haranguing Ronald Reagan about his tax program, until the president lost his temper and told him to 'Shut up.'"

"That's the one. I sent out the invitation to him in San Jose, Calif."

"Here have another sandwich," I said. "Didn't you have any idea he would make trouble when you invited him?"

"What did I know about Gary Arnold? He was just another pretty face on a computer. My orders were to invite all the Republican faithful to the White House, so Reagan could give them a pep talk for their congressional campaigns. I figured anyone from California was a team player."

"You would think that," I said. "It wasn't your fault he became a household word."

"That's what I told Meese, Deaver and Baker. But they said I should have smelled he was an off-the-wall conservative. I believe the thing that really got to them was when Arnold started shouting 'We have a Tylenol taxing situation here, and we have Reaganmortis setting into the nation's body politic.'"

"He shouldn't have said that in the president's house."

"Look, you can keep the left-wing kooks out of the White House, but where do you draw the line on the right-wing fringe?"

"You should have been tipped off when you saw the guy had a beard. A conservative with a beard is much more dangerous than a liberal with one."

"We know that now, but we didn't then. In fairness to me, he was wearing a suit and a tie."

"That should have been your clue. A right-wing guy with a beard wearing a suit and tie is bound to cause trouble in the White House. You want an apple?"

"I'd rather have your banana. I haven't told you the whole story. After I invited all the congressional candidates for the pep rally I got a brainstorm. I suggested the president make it a media event and invite in all the press and television cameras to cover it. I said the president wouldn't have a more loyal audience in the East Room during his entire term, and they would pitch him nothing but softballs so he could articulate his program. The guys around the Oval Office thought I was a political genius, until Gary Arnold said the rmperor had no clothes on."

"I have a hard-boiled egg," I said. "The way I see it, you did everything right, and they're just making you the fall guy because the Republicans can't keep their right-wing fanatics under control."

"That's nice of you to say. You don't have any salt for the hard-boiled egg do you?"

I handed him my salt shaker. "So just because a hothead congressional candidate dumped all over the White House Republican party in the East Room in front of the TV cameras and press, you were given your walking papers. Didn't you at least try to take your case to the president?"

"I did as soon as the meeting was over."

"What did he say?"

"He told me to shut up."

(c) 1982, Los Angeles Times Syndicate

TODAY IN HISTORY

Today is Sunday, Oct. 17, the 290th day of 1982. There are 75 days left in the year.

Today's highlight in history:

On Oct. 17, 1777, British forces under Gen. John Burgoyne surrendered to American troops in Saratoga, N.Y., in a turning point of the Revolutionary War.

On this date:

In 1931, mobster Al Capone was convicted of income tax evasion.

In 1933, physicist Albert Einstein arrived in the United States as a refugee from Nazi Germany.

In 1945, Col. Juan Peron staged a coup in Buenos Aires, becoming the dictator of Argentina.

In 1976, wall posters in China accused Mao Tse-Tung's widow — Chiang Ching — of hastening her husband's death by nagging him in his last weeks.

Will Texas' water glass be half full, half empty in January?

By BILL KIDD
Austin Bureau

AUSTIN — One of the major areas of disagreement between Gov. Bill Clements and his Democratic challenger, Attorney General Mark White, has been over how well, or how poorly, Texas' economy is doing.

In some ways, the dispute is the old argument about whether the glass is half full or half empty.

Perhaps a more meaningful question would be whether the glass has enough water to satisfy anyone's thirst.

Members of the Legislative Budget Board, which deals with state appropriations matters, have been keeping particularly watchful eyes on the economy and state revenues lately.

In less than three months, the 1983 Legislature will be arriving in Austin, with one of its main tasks being to set the spending for state agencies for the 1984 and 1985 fiscal years.

And legislators are always thirsty for revenues.

So LBB members were pleased to hear from executive director Jim Oliver that lawmakers will have more money than they may be able to spend.

Comptroller Bob Bullock has estimated that lawmakers will have $5.1 billion over and above what was available in January 1981 available for spending in January 1983.

Lawmakers will be able to appropriate some $24 billion for the biennium, Oliver says, some $4.4 billion to $4.9 billion more than last time.

That means some $700 million to $1.1 billion may be left over.

The reason for that is Article VIII, Section 52, of the Texas Constitution, which puts a cap on the growth of state spending — although in years past that cap hasn't come into play.

Those provisions say the rate of appropriations' growth from state tax revenues may not exceed the "estimated rate of growth of the state's economy."

AUSTIN NOTEBOOK

That restriction doesn't apply to dedicated funds, and the Legislature can override the limit by passing a concurrent resolution which "finds that an emergency exists and identifies the nature of the emergency."

Texas legislators, ever since the 1876 Constitution was ratified, have been on a pay-as-you-go policy (except to "repel invasion, suppress insurrection, defend the state in time of war" or to pay existing debts).

Under the pay-as-you-go provisions, lawmakers could spend all of the $5.1 billion additional revenues expected, but under the new spending cap, they can't.

Or they can't without a majority vote of both houses or without an increase in the growth of the state's economy.

Personal income in Texas has been rising, to be sure, over the past several decades, and continues to increase each biennum.

During the early 1960s, the rate of growth was in the range of 10-13 percent, the LBB reports, while the rate began rising in the later 1960s, going to a growth of around 19-20 percent per biennium.

In the mid-1970s, the rate began moving toward the 30 percent rate, with the figure for the coming biennium estimated at 23-27 percent.

So the LBB is figuring on an increase of 25.5 percent as the growth-in-the-economy figure.

But the figure could be set at a higher rate by a four-member board composed of Gov. Bill Clements, Lt. Gov. Bill Hobby, Speaker Bill Clayton and Bullock, which is to meet before the 1983 session convenes in January.

In order for the Legislature to get to spend all the estimated revenues without finding an "emergency" exists the state's economy would have to achieve a growth rate of 32 percent.

What happens if the Legislature does end up with $700 million to $1.1 billion "on the table"?

"We don't really know," Oliver admits, since this would be the first time the cap on spending has come into play.

Presumably, he says, the money would stay in the Treasury and could be invested to provide additional income to the state for the following budget period.

But it's also likely that the Legislature will find an emergency — and there are a number of likely candidates, ranging from highway construction to establishment of a school construction fund for colleges not under the Permanent University Fund, or reviving the "Water Trust Fund" idea advanced by Clayton.

As one lawmaker noted, "We always run out of good money before we run out of good programs."

Still, with most states facing the prospect of raising taxes to keep state government going, Texas lawmakers can consider themselves lucky to have the probem of whether and how to spend money, rather than how to raise it.

SPEAKING OUT

Volunteers in schools perform important jobs

A former teacher in Midland Independent School District, Gayle Dodson is in her ninth year as an active PTA member. She has served two terms as president of the Bowie Elementary PTA, as City Council PTA president in 1980-81 and as membership chairman of the San Jacinto PTA. She also currently serves as VIPS chairman on the City Council PTA board and as District 17 achievement and evaluation chairman for 1982-84. She has lived in Midland 22 years.

By GAYLE DODSON

It's the real thing...Volunteers in Public Schools...the VIPS program! VIPS people are very important people — very industrious people — very imaginative — very impressive — very interesting — sometimes very inventive — and very indispensable people. We know that our volunteers in public schools are very vital to our school system. We have quality education in our Midland Public Schools, and our VIPS program helps us to enrich the quality of this fine education.

The structure of the VIPS program begins with Midland Independent School District and the City Council PTA. We work with representatives of the administration; we work as a volunteer co-ordinating team with the elementary and secondary principles; the school volunteer chairman; the teachers; the office personnel; the volunteers. This entire structure is the key to success!

A citywide volunteer program was established in 1977, as the result of a group of citizens forming an organization called the Midland Alliance in order to promote a safe and orderly transition to the court-ordered integration plan and to create additional programs and services in the schools to ensure educational excellence. More than 450 volunteers helped in the school during that year. The program has expanded each year thereafter, with this past year having recorded approximately 17,000 volunteer hours and having over 2,000 volunteers. This fall, six years later, we have over 3,000 volunteers serving in one capacity or another. This is the second year for expansion into our secondary schools, and the program has been very well received.

Another expansion for this year is having a volunteer program in the Gifted Education of Midland (GEM) and the Early Childhood Center at Bunche Elementary, along with the 19 elementary schools, the seven secondary schools, and the Carver O.D.L. Unit PTA (Occupational Developmental Lab). Each school has a volunteer chairman, and the program is coordinated by the VIPS Team, Gayle Dodson, Molly Bedrich, and Kay Sowders. Having 27 PTAs and 27 functioning volunteer programs plus the additional programs gives MISD a unique flare throughout the state of Texas and, frankly, nationwide.

PTA (Parent-Teacher Association) has changed quite a bit in the past 10 years. The days of just busy-bodying around the schools and only serving punch and cookies is a thing of the past! Volunteers are needed, appreciated, and welcomed in the Midland Public Schools in both elementary and secondary levels. The days of saying that the secondary students don't want their parents around school is another thing of the past! We can truthfully say that the secondary students of our volunteers have accepted their parents' volunteerism, as well as the school personnel on secondary campuses. And if there is a little embarrassment on the student's part, it doesn't last but a day or two!

The school personnel not wanting the "busy-bodies" around the campus (especially on secondary level) is another thing of the past, as in this day and time with so many more learning situations, VIPS people become very important and very sought after. The Volunteer Program is here to stay...the PTA is here to stay...and the "busy-bodies" have been put-to-work...and the punch and cookies have joined a long list of other volunteer jobs, such as storytelling troupes, classroom one-to-one help, clerical work, library assistants, room mothers, carnival workers, Helping Hands (safety program), school improvement and beautification projects, and many, many more volunteer jobs.

Getting parents to join PTA is an enthusiastic project that starts with the students. If you can motivate them, you can motivate their parents. Enthusiasm is the key to the entire program. Promoting PTA volunteerism isn't always an easy task, but it is a challenge — a joy.

If you prefer to only join PTA at your child's school, that is always a big help because the financial aspect of the program is always important, as you well know! Five of our local banks understand this need as they contribute each year to the VIPS program along with MISD to help the program function to its fullest capacity.

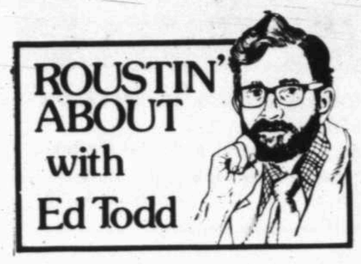
Expansion of the VIPS program for this year is the Adopt-A-School program, which is a program appealing to the civic organizations, retired persons, businesses, etc., to adopt a school and to send their volunteers on a regular basis. This program gives the working parents a chance to help with the education of their children; it gives the retired persons a chance to continue their ability to help; it gives the non-parents a chance to be a part of VIPS.

SHARE is another program that will be expanded into the community in a more extensive manner this year. This program is a wonderful opportunity for citizens to share with students their knowledge of a particular subject by showing slides, pictures, or just telling of experiences.

Being a member of the PTA and of the VIPS program in Midland is the real thing...the thing to do...the route to take in order to serve the children who are the future of America, the grandest place on earth! It's a grand old flag, a grand old system, and it has a grand old program...VIPS! And you will never find more grand support than from our MISD administration and MISD teachers. PTA is not a waste of time...it is a vital part of the lives of our future citizens...our children.

"Speaking Out" columnists are invited to submit articles on subjects of their choice. They should be limited to 850 words or less.

To get along, positively ignore life's negatives



The dubiously tactful "Won't-you-shut-up" technique used to suppress a critic's freedom of expression is, "Don't be negative."

Accentuate the positive; ignore the negative. Maybe the positive will dominate; maybe it won't.

If ignored, the negative aspects of a situation or condition likely will evolve into the unacceptable and, paradoxically, become acceptable. Let it grow and become unchecked and normal. And the bigger and more complex the negativity becomes, the more acceptable it becomes. You become part of the monster.

Look around with a critic's penchant for detecting all those minuses in society, and, all the while, recognize the positive. It abounds in God's creation.

Here are a few examples:

—The national debt: Negative. Don't discuss it and, most importantly, don't do anything to rid that negative force from the economy. You could offend those sensitive pompous souls in the District of Columbia; they might misinterpret your motives. "Debts are healthy for the economy," the bureaucratic "they" will tell you. Sure, if you're getting the interest and not paying it.

—The streets of Midland: Negative. Now, you must be very cautious here, because, as you know, the mayor and his councilmen, in all their finite benevolence and wisdom, are doing all in their power to give you smooth, driveable, safe and unmarred paths across town. But, please, don't mention the potholes, the faded street lines, the unsynchronized traffic lights, or the unpaved south- and east-side streets to them. They're cognizant of the conditions. You see, they either can but haven't or can't and won't do anything about them. "We're aware of the problems," they'll tell you with a sense of grand positivity, will thank you for your concern, but probably really had rather you not mention faults of their city.

—Don't buck: Lest you be negative. You could work yourself into a deep pit here and forevermore be lost and shunned. For instance, say that you've come up with a better way to make life at home, work or on the streets safer. Now, that might sound positive, but when you review the monetary costs of your proposals, you'll find them riddled with those minus forces. For example, you might consider firewalls between apartment and townhouse units: costly and negative; raises construction costs and spreads flak. Remember from history what fire did to Chicago in 1871?

—Water: Negative. Midland's "hard" and impure water is not entirely unfit to drink; it won't kill you, stain your teeth, turn your blood into a saline solution, or clog up your plumbing — personal and household — overnight. But given enough time, it'll alter something about your biochemistry if you can stand to drink it and can't afford bottled water, a purifier or a distiller. The city powers are acutely aware of the problem; don't badger them. They're only servants.

They're also aware of the problems at the other end of the plumbing — the sewage effluent. They were bothered on that issue and did and are doing something about it. It may not be "the" solution, but, thanks to unrelenting hassling, something got done.

—Country living: Negative. You see, the county commissioners are doing all in their limited powers to make Midland County's brand of rural living acceptable. They're trying, twice monthly at least. It's becoming suburban living with many of the attendant ills of city living under lax ordinances. So, don't be too negative when you bug the commissioners. They, too, will express their appreciation for your concern and point to their budget and powers. "Wish we could, but the county doesn't have the money." "It's not in our powers." "We didn't know."

Now, why be negative? Negativity will alter your character and that of the town and country. Put a positive twist to it.

LETTERS TO THE EDITOR

Only one way

To The Editor:

I wish to thank publicly The Midland Reporter-Telegram editorial staff for its lead editorial "Misdirected decision" in the Oct. 1 issue. It said much about the badly handled matter of the Cuthbert Street (Ward to Garfield) traffic direction.

I am angry, and I feel betrayed by the council. The letter we received from the city notifying us of the possibility of changing Cuthbert from one-way west to one-way east did not mention the possible change to two-way. Thus, the action of the council to change to two-way after first deciding to change to east one-way, in a session after the neighborhood representatives had left the council meeting was sly and backhanded.

I do not know the motives Mr. Sloan, Mr. Hatfield, and Mr. Marcum have in making thir decision, but I wish to put the case of the residents of Cuthbert — and of Midland — to our fellow citizens.

There are two factors to be considered: safety, and proper open handling of city business by the council. We hear few complaints about our section of one-way. Of course it is inconvenient at times, but the benefits in safety outweigh the disadvantages. There have been no rear-end accidents, nor any accidents that I have knowledge of, since the one-way went into effect.

Now, no one has to stop in the middle of the street, holding up traffic behind them, while waiting to make a turn into a driveway. Nor do we have to wait long minutes to back out of our driveways waiting for a break in traffic fic from both directions. Heavy trucks do not come down our street now. Traffic has increased considerably on Cuthbert since the recent growth of Midland, but with the one-way designation, we who live on the street can handle the increase.

Cuthbert should remain one-way west because that is what drivers are used to. It should not be two-way. the street is too narrow. It cannot be widened since front and sideyards are too shallow.

Cost-wise, leaving the street as-is means no re-engineering of the light, no moving of signs, no moving of the barrier at Ward Street. No cost to taxpayer. About half the driveways on Cuthbert are one-car drives. Therefore, second cars and visitors must park in the street, a dangerous situation with two-way traffic.

Fire trucks and ambulances now go west on Cuthbert to cover the business areas from Andrews Highway west, north and south, and they can do it in good time safely with the one-way west designation. Two-way would slow their response, and one-way east would require new routing, probably a less desirable route.

If our council cannot take care of an ordinance matter in front of the citizens it most concerns, but must change their votes after the citizens leave the meeting, then motives must be questioned. The matter itself does not affect all citizens of Midland, because only a small percentage uses this route. However, the way the council chose to make the change does concern all citizens.

Why 'city' streets?

To The Editor:

Please tell whomever it is that is suffering from delusions of "big-citydom" to go spend a week in Houston and drive through downtown at noon every day. Then come back to Midland.

They will quickly notice that there is no need for one-way streets anywhere in Midland. They are just feeding their own self-image by synthesizing situations so they can make "important" decisions.

Midland is easy to get through at any hour of the day. And just because 15 cars line up at a traffic light at the corner of Big Spring and Wall is no reason to go into a panic and throw one-way signs all over the place. I think Midlanders know the area well enough to use less traveled roads if they are in a hurry.

Like I said, after one week in Houston, you will appreciate Midland, and seriously question the wisdom of our city engineers. I have never had a problem driving in the city, but if the city "engineer" has his way...I'll never make it home for dinner.

Ernest Schmeltzer
Midland

Thanks to center

To The Editor:

I wish to express my love and appreciation to the Allison Cancer Therapy Center for the love, kindness and courage they showed me while taking my radium treatment.

Dr. Svenson and the nurses really know what they are doing and I'm sure everyone who has received treatments there can say the same things. I pray God's richest blessing on each one.

Mattie Adams
Midland

Halloween horror

To The Editor:

Many people feel Holloween is just another holiday celebrated just for children; with mom's and dad's help in this event. Not so! Who are your children giving honor to each time he dresses up like a little devil or witch? Each time a school or church makes up a "spook house" to keep the kids out of trouble, what does it represent? We are giving honor and glory to Satan.

Many are not aware of this but the occult and its practices is in the midst of a revival (especially in the U.S.A.) the likes of which the world has never seen. This very year Holloween will be celebrated by 98 percent or more of Satan worshipping cults as their most important and powerful sabbath day. One witch on a T.V. talk show said that Halloween was to witches what Christmas is to Christians. Deuteronomy 18:10-12 warns us that witchcraft and things of occult are an abomination unto the Lord. He will not tolerate such things. He has warned us against participating in sorcery and witchcraft and worshipping idols of any nature.

As you can see the activities connected with Halloween are based on very wicked and powerful occult rituals. Have we removed prayer and consideration of God from our schools in order that the occult practices and witchcraft might have a suitable climate in which to grow?

You may say "But we only do it in fun and make believe." You may object. God says "Don't do it, period." Halloween is the devils's day. Keep it out of your home, your school and your church.

Mrs. John McBride
Midland

Letters Policy

■ Readers are invited to submit letters to be considered for publication. They may be on any subject, but should not be slanderous or defamatory. They must be signed by the writer and must include the writer's correct mailing address and a telephone number at which the writer may be contacted during the day, either home or office.

No letter will be published anonymously and names will appear. Addresses and phone numbers are for verification only and will not be published.

Writers should be as concise as possible and the right to condense letters is reserved. They will be published as soon as possible after being received.

They should be addressed to: Letters to the Editor, The Midland Reporter-Telegram, P.O. Box 1650, Midland, Texas 79702 or brought to the newspaper's editorial department.

KINGSBURY-SMITH

With decreasing interest rates Republican hopes increasing

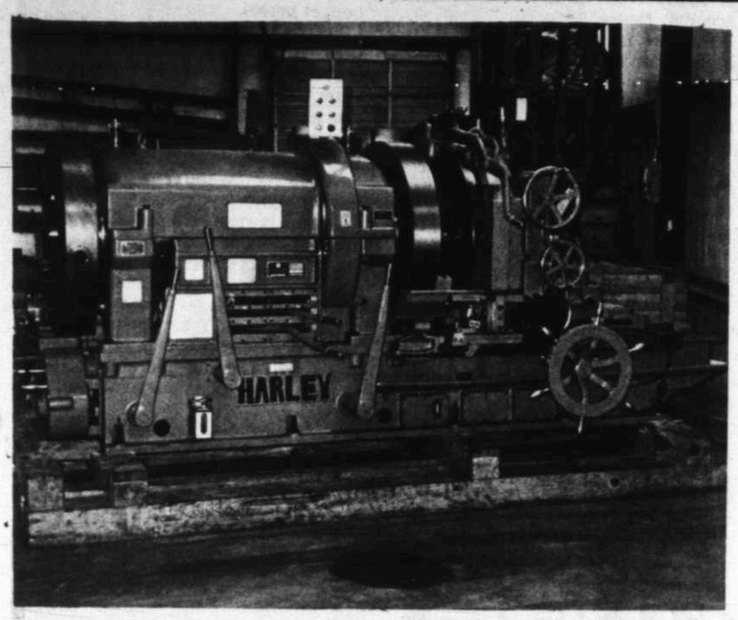
By KINGSBURY SMITH
National Editor, Hearst Newspapers

WASHINGTON — Declining interest rates, the surging stock market and President Reagan's optimistic conviction that America is recovery-bound have strengthened the belief of economists generally that the country will experience a mild recovery during the first half of next year.

Among the encouraging signs are a drop in mortgage rates to 14⅞ percent compared to 17¾ percent two months ago, coupled with predictions that the rate will be down to around 12 percent by the end of next year. This has led to forecasts that housing starts next year may gain up to 50 percent over this year.

With the auto loan rate down to 15½ percent compared with 18 percent July 1, and expected to go lower, a gain of at least 15 percent in auto sales next year compared with 1982 is foreseen.

With inflation now expected to average between 5 percent and 6 percent next year, a steady rise in retail sales was forecast at the National Retail Merchants Association meeting in Crystal City, Va., early this week.



Machine tools like the Harley pipe-threading machine, pictured above, may be found at Universal Metals & Machinery, 7400 E. Hwy. 80 in Odessa. Universal prides itself on quality and service to the Permian Basin. The Harley will be displayed at the Permian Basin Oil Show this week, Oct. 20-23.

Best values at Universal

Paid Advertisement

With a huge inventory of machinery in stock at all times, Universal Metals & Machinery is able to fully serve the needs of the Permian Basin. Universal Metals & Machinery prides itself on the fact that it is able to supply this area with the machinery it needs from the warehouse on Hwy. 80, just east of Odessa.

Universal also has a supply of good used machine tools in stock. All used tools are on the floor and may be demonstrated with full power. All used machines have been checked by service personnel for proper performance including electrical wiring and parts. They are ready to go and carry an excellent warranty, fully backed by Universal with factory authorized service personnel. Always remember that in buying a used tool, the machine is only as good as the dealer and his service. Universal stands out in this department with over eight years in dealing with those in Midland-Odessa.

Universal Metals & Machinery is the West Texas dealer for the Harley pipe threading machine. The Harley machines feature 3-jaw universal chucks, hardened gears in the headstock, internal coolant, hardened and ground bedways, sight glass oilers for bushings, swing pendant control, scissor type vise, cut-off chamfering and reaming tools, full-length lead screw, bronze half-nuts, power rapid traverse to carriage, hardened and ground sine bar, and front or rear clutch equipment.

The Harley pipe threading machine comes in three sizes; 13 , 8 , and 4 . Motors on all sizes are 1200 rpm and the hp is 5, 10, or 15, depending on the size of the machine. Universal Metals & Machinery will display three Harley pipe-threading machines at the Permian Basin Oil Show this week, October 20th thru 23rd at the Ector County Coliseum in Odessa. They invite you to come on over to the Oil Show and take a look at the wonderful Harley machines.

New machine tools from Universal have a complete warranty, backed by both the factory and Universal, with a full 30-day return privelege. Warranty work on standard machine tools sold by Universal is performed by their own staff of trained personnel, even the electrical work, eliminating the costly, time-consuming wait for service.

All new machines are tested before leaving the warehouse. All used tools are cleaned, tested for proper operation, and repainted. Used tools are as good as new when they leave the warehouse.

Universal Metals & Machinery is proud of their machines and service. They feel that the people in the Permian Basin deserve the best, and the are willing to put forth the effort to assure you of the best. Remember, in the rare cases that they don't have what you want, they can get it for you. Universal invites you to use their professional and friendly service to find the ideal machine for your business.

Universal Metals & Machinery will buy, sell or trade, and they can help you with financing your purchase if needed. Visit the friendly staff at Universal Metals & Machinery, 7400 E. Hwy. 80, or call 563-1984. Remember to come by the Oil Show this week and talk to one of the staff about the Harley or any of the other fine deals they have waiting for you. Or come by Universal's warehouse on Hwy. 80 and see the large stock of new and used machine tools, and make them an offer on the machine tool you would like to own. Universal prides itself on quality and service to the Permian Basin.

The "Engineering Plastics" group consists of acetal (Delrin-Celcon), Nylon, Teflon, Acrylics, Cellulosics, Vinyls, polycarbonate, polyolefins, industrial laminates, and polyvinyl chloride.

Acetals offer a high degree of toughness, impact strength, dimensional stability, low co-effecient of friction, good chemical resistance, and good electrical properties.

Nylon is the most widely used because it is extremely strong, tough, weather-resistant, and is self-lubricating. These important properties make nylon ideal for use in gears, bearings, bushings, valves, wear strips, pulleys, conveyor channels, and rolls. It outlasts metal in many applications and reduces noise where it replaces metal to metal contact.

Nylatron GSM Tubular Bar is widely used to replace brass or bronze bushings in pumping units. Saddle bearings, tail bearings, and Pitman Arm bearings that have the Nylatron GSM material last longer because of its superior lubricity and resistance to shocks and abrasion.

Teflon offers a unique combination of heat resistance and low friction together with good chemical and electrical properties.

Acrylic, which is available in sheet, rod, or tube has a unique combination of properties: excellent transparency and clarity, good impact strength, lightweight, excellent weatherability, good resistance to most chemicals, formability, and easy machinability and fabrication.

Billiard Balls, magnetic tape, animation in the motion pictures, and overlay films are just a few of the products and applications for cellulosics material.

Some vinyl applications are face shields, drawing instruments, lamp shades, dial covers and faces, scales, lighting diffusers, menus, shims, insulating spacers, airline seat pocket cards, and many other decorative applications.

Polycarbonate is the toughest material that you can see through; it can withstand everything from baseballs to hammers without shattering or breaking. It is an excellent replacement for windows, skylights, and signs.

Polyethylene (low and high density), polypropylene, and UHMW polyethylene are called polyolefins. They are all corrosion and abrasion resistant, chemical resistant, easy to fabricate, and have good electrical properties.

Industrial laminates (Phenolic material) are used in the appliance, automotive, textile, machinery, metal finishing, aviation, chemical, electronics and electrical industries. This material makes strong, reliable insulators for applications in relays, switches, bus bars, stand-offs,panels, sockets, terminal strips, fuses, coils, motors, generators, transformers, circuit breakers, condensers and many others.

Polyvinyl Chloride, known as PVC is the oldest sheet and tube product on the market used for corrosion resistant tanks, ducts, fume hoods and pipes.

Call 563-0185 or come by 1406 County Road 132 West (West of OIME in the D&S Industrial Park No. 1) for any of your industrial plastic needs.

The "gang" at A-1 Plastics invites you to try out their friendly service next time you have a need for plastic of ANY type. From left, Erin Bailey, Kevin Bailey, and Andrea Bailey. A-1 can meet any of your needs in any field of plastic work, both engineering plastics and industrial laminates.

Midland Building Specialties recommends that you prepare yourself for the coming winter months by insulating your house with storm doors and windows. Above, new manager Ken Van Hoozer displays one of the storm windows that can save you money on utility bills year-round. Give them a call at 683-2184 or 563-3013.

Windows help you save some money in long run

Paid Advertisement

With the summer months quickly fading into the past, and the winter months ahead predicted to be the worst in years, now would be the perfect time to ask yourself about the cost of maintaining a comfortable temperature inside your house. With utility costs soaring to an all-time high, you cannot afford to let precious heat slip out your windows. If the cost of heating or cooling your house are past the point of acceptance, you need to take a long look at how and why it costs so much. Midland Building Specialties, 904 W. Front in Midland, can help you save money on both heating and cooling costs. With the costs of electricity or gas today, the importance of having highly efficient, energy-saving doors and windows cannot be overemphasized.

Properly installed, energy-efficient windows create a pocket of air between themselves and the regular window. This pocket of air acts as a "dead" space, remaining at a fairly constant temperature year-round, not allowing air from the outside to seep into your house, and at the same time keeping the treated air inside from seeping out. Therefore, during those long, hard winter months ahead, warm air remains inside your house, leaving old man winter "out in the cold." Likewise, during those scorching West Texas summer days, cool air remains inside while the heat is left outside where it belongs. Since the heated air remains inside your house, your furnace has to work less, eliminating costly repair and maintenance bills.

The professionals at Midland Building Specialties would be happy to show you they can help you save money on your utility and repair bills. They offer free estimates. Professional work guarantees you a reliable, trustworthy job, not to mention tremendous savings on your bills.

Frames for energy-efficient windows are available in several styles and colors to match your tastes and needs. Glass comes in clear, grey tint, bronze tint, or sunglass.

One of the most important things to remember about energy-efficient windows is that the window itself does not save the money for you. It must first be properly installed in order to work well. Here, again, is where professionalism at Midland Building Specialties stand out from the crowd. They offer first rate service along with the most reliable job in town. Call Ken Van Hoozer today at 563-3013 for your free estimate and start saving yourself a bundle of money. Midland Building Specialties is located at 904 W. Front, just behind Mid-West Glass.

Canadian subsidies said to be hurting Southern lumber industry

NEW ORLEANS — Unfair competition from the Canadian lumber industry, heavily subsidized by Canadian governments, is jeopardizing the survival of lumber mills in towns throughout the South and across the country, charges a petition filed by U. S. lumber companies and associations, including the Southern Forest Products Association.

In the South, where the forest products industry is the largest employer and accounts for a large portion of state and local economies, U. S. companies have found they can't compete with lumber from Canada.

When a U. S. operator can't sell to the lumber yard across the street from his mill because the Canadians are coming in cheaper with their subsidized lumber, that's not free trade. All we want is free and fair competition," said Paul F. Ebinger, chairman of the United States Coalition for Fair Canadian Lumber Imports, which filed its petition last week.

The petition asks for the federal government to impose a duty on Canadian lumber entering the United States equal to the value of the massive subsidies. For 1980, the duty would have been 64.6 percent of the value of imported Canadian lumber.

The countervailing duty petition filed with the Department of Commerce and the International Trade Commission states that the U. S. softwood lumber industry's economic advatages over canadian producers on nearly every element of competition are wiped out by Canadian policies of selling public timber far cheaper than its true market value.

The result is that in Georgia, for example, the Canadian share of the lumber market was more than 55 per cent in 1980. In other southern states, the percentages of the Canadian market share was: Alabama, 18.47 per cent; Arkansas, 13.51; Florida, 57.87; Louisiana, 9.05; Mississippi, 10.58; North Carolina, 38.97; Oklahoma, 12.49; South Carolina, 37.55; Tennessee, 37.20; Texas, 20.46, and Virginia, 40.77.

The petition covers annual imports worth nearly 1.9 billion — more dollars than are involved in a recent group of steel industry cases that invoked the same trade law remedy. In addition to lumber, the petition covers the smaller softwood industries of fence and shakes and shingles.

The coalition said Canada's share of the U. S. softwood lumber market has increased over the past 20 years from 13 percent to more than 30 percent, with two-thirds of that increase coming in the past seven years.

The petition was filed by the coalition on behalf of eight industry trade associations and more than 350 companies, ranging from giants of the lumber industry to tiny backyard shake and shingle mills.

At the heart of the complaint is the Canadian practice of selling stumpage — the standing timber — by allocation instead of competition for far below its true market value. Ninethy-five percent of the timber in Canada is government owned, while in the southern United States, 75 percent is owned by private nonindustrial landowners.

An economic analysis submitted with the petition found that the average Canadin stumpage awas subsidized by $133.78 per thousand board feet — more than half the value of typical lumber products on today's depressed market. The analysis found that U.S. producers pay on the average 5.6 times as much for their raw materials as do Canadians.

The next step is that within 20 days of the October 6 filling, the International Trade Administration of the Department of Commerce must determine whether the complaint is reasonable.

IOCC proposes creating research institute

OKLAHOMA CITY — The Interstate Oil Compact Commission has proposed that it establish a National Institute for Petroleum Research which would operate the Bartlesville (Oklahoma) Energy Technology Center.

The IOCC represents the governors of 30 oil producing states and six non-producing states. It has been in existence since 1935, with headquarters in Oklahoma City, to assist the states in developing oil and gas resources to the maximum extent possible. The Bartlesville center — which the Department of Energy wants to get rid of — has been engaged in pure oil and gas research since 1918. Its programs have also focused on maximum ultimate recovery but have been oriented to basic and applied science and petroleum technology.

Under the plan, which was submitted to the Secretary of Energy last week, the IOCC would create NIPR as a non-profit corporation which would be headed by a board of directors composed of representatives of state government, the petroleum industry and major universities. A larger advisory committee would assist the board in designating key research projects. The board would employ a president of the institute who would act as managing director.

All existing employees of the BETC would have the option of becoming employees of the institute. The federal government would agree to assist in the funding of the institute for five years. During that period of time the extent of funding on the federal side would diminish and the contributions by other entities would be expected to increase. Most of this would be expected to come from research projects for the industry.

The IOCC Executive Committee, composed of official representatives of the governors, endorsed the principle of operating the Bartlesville center at a meeting last month.

"Our recommendation provides a balance among the interest of producers, consumers, the federal and state governments, the industry and the universities in ways no other institution could" said W. Timothy Dowd, executive director of the IOCC. "We see it as a concrete example of the best of the new federalism".

Dowd said the concept has been in the process of being developed for several weeks. The idea has been discussed with officers of several key states, the research directors of the petroleum industry and energy leaders in universities.

Home Loan Bank celebrates 50th anniversary

Oct. 15 marked the 50th anniversary of the Federal Home Loan Bank of Little Rock. On this date in 1932, the bank officially opened, and by the end of the year it had 34 members and made $565,000 in advances. Today, the Bank has 562 members, $5 billion in assets and $3.9 million in outstanding advances.

The Little Rock Bank is one of 12 regional banks in the Federal Home Loan Bank System created by the Federal Home Loan Bank Act of 1932. Savings and loan associations in Arkansas, Louisiana, Mississippi, New Mexico and Texas are the members of the Ninth District Bank of Little Rock.

Local members include: Home Savings and Loan Association of Midland, Odessa; First Savings and Loan and Petroplex Savings in Midland; First Savings and Loan Association of Odessa; Odessa Savings Association; Big Spring Savings Association and First Federal Savings and Loan Association of Big Spring.

The membership by state includes: 61 associations in Arkansas, 120 in Louisiana, 54 in Mississippi, 33 in New Mexico and 294 in Texas. Member associations are the stockholders in the Bank, and the Board of Directors, consisting of 18 persons from the savings and loan industry and business community of the Ninth District, sets policy for the bank.

Established in the midst of the Great Depression, the Federal Home Loan Banks were conceived to be the most important new machinery for financing residential mortgages. Through legislation creating the Bank System, Congress also sought to stabilize the nation's savings associations, promote confidence in the economy and help Americans keep their homes.

The bank provides a central credit source for its member associations, and within the national framework, insures that these associations are operated in a safe and sound manner in accordance with applicable laws and regulations. The Federal Home Loan Bank Systen also administers the Federal Savings and Loan Insurance Corporation, which insures customer deposits up to $100,000 per account.

Housing has always been the major emphasis of the Bank's membership. In the first six months of 1982, Ninth District savings and loan associations made available $4.4 billion in mortgage loans. Texas mortgage loans amounted to $3.5 billion; New Mexico, $170 million; Mississippi, $50 million; Louisiana, $435 million; and Arkansas, $253 million.

OIL FACTS

Texas produced 4.4 percent of the world's oil in 1980; 7.2 percent in 1970; 12 percent in 1960; and 22 percent in 1950, says the Texas Mid-Continent Oil & Gas Association.

The deepest well in the world is on the Kola peninsula in the U.S.S.R., according to data compiled by National Supply Company. The well is at 34,895 feet and still drilling.

1980 set a record for deep drilling in the United States as 743 wells went to 15,000 feet or deeper, says Petroleum Information Corp. The record was broken again in 1981 with 999 wells.

Newest motel opened

Metro Inn, Midland's newest motel, celebrated its grand opening last week at 3708 West Wall, across from Denny's Restaurant.

The 51-room motel is managed by Sam Bhakta and owned by the Bhakta family. Construction of the $900,000 facility was done by Westwind Builders of Odessa. The project was completed at the end of September and the motel opened for business Sept. 27.

Metro Inn features 19 single and 20 double rooms, each with queen sized beds, and 12 rooms with king sized beds. There is also a swimming pool.

BUSINESS NOTEBOOK

SAC to look over agencies regulating financial institutions

By BILL KIDD
Austin Bureau

AUSTIN — Members of the Sunset Advisory Commission plan to consider recommendations on state agencies regulating financial institutions when the SAC returns to Austin Nov. 10-12.

But the agencies involved, and trade associations representing the industries regulated by those agencies, have indicated to the SAC they don't feel any major overhaul of the agenices is needed.

The SAC, chaired by Sen. E. Howard, D-Texarkana, will make its recommendations to the 1983 Legislature, which must decide whether to continue, abolish or modify agencies including the State Banking Board, Texas Department of Banking, Texas Savings and Loan Department, Office of the Consumer Credit Commissioner, State Depository Board and Texas Credit Union Department.

SAC members indicated one of their principal concerns is getting additional control of the budgets of those agencies — which currently aren't part of the general appropriations bill process — along with getting funds collected by the agencies placed in the State Treasury, instead of being administered independently.

The SAC staff has recommended consideration of combining the banking, savings and loan consumer lending agencies (currently under the State Finance Commission) into one agency — a move which has drawn opposition from SFC members, agency heads and industry representatives on grounds it would add to the bureaucratic structure, and wouldn't reduce the number of personnel required.

Howard argues some economies would be possible with combined operations, but he assured those testifying before the SAC earlier this month that the panel doesn't want to make changes "just to be changing something."

One continuing argument is whether the State Banking Board should continue to set interest rates charged banks for use of State funds, or whether those funds should be offered by competitive bids.

Don Houseman, Dallas, chairman of the Governor's Task Force on Trust and Asset Management, says his group considered the question of competitive bids on State funds in its review of the Depository Board's operations.

While the SAC staff has suggested competitive bidding as an alternative, Houseman says the task force "felt competitive bidding would be difficult to accomplish," and had "serious doubts that it would increase the revenues to the State."

Rather, he says, the group (which included a number of investments experts) preferred use of a formula which could be adjusted monthly — something the board has been considering.

Competitive bidding, Houseman feels, could result in greater difficulty in placing State funds (he notes the board has had banks refuse State deposits recently apparently due to the rate on them).

"If you want to open the door and let everybody in the United States or the world bid," he told the SAC," that's a different question."

However, committee members indicated they think use of Texas deposits should be restricted to Texas banks.

Savings and Loan Commissioner Alvis Vandygriff told the SAC savings and loan associations would like to have the authority to act as State depositories, saying the associations have access to the same types of investments as banks, and could offer "completely collaterized loans."

Texas Savings and Loan Leagues asked for "legislative changes which would broaden the definition of security instruments savings and loans may issue for funds acquisition purposes."

The group says its legal counsel advises that "current statutes preclude marketing any form of subordinated obligation, preferred stock or other forms of indebtedness to augment capital and investing capabilities."

Recently, the Federal Home Loan Bank Board adopted rules permitting Federal mutual associations to issue mutual capital stock certificates, and for some years Federally charged associations have had authority to sell subordinated debentures.

The FHLBB is updating its regulations to include the authority for preferred stock by Federal stock associations, and the Texas league argues it is "imperative" that State-chartered associations be given comparable powers.

Credit Union Commissioner John (Pete) Parsons urged the group to continue the Credit Union Department as an independent agency, noting Texas has 500 credit unions which "certainly justifies a separate agency."

Banking Commissioner Robert E. Stewart also argued for continued separation of the agencies, saying in other states, which have fewer institutions and have consolidated agencies, those in charge often find it difficult to balance the needs of different types of institutions — while trying to maintain protection of the public.

Photo by Bill Hunter

Kent Oil Company, founded in 1957 in Monahans, Texas, observed its 25th anniversary Friday at the company's new corporate headquarters in Midland. Shown are Arthur Sparks, vice president of operations, and E. L. "Buck" Kent, founder of the convenience store and gasoline marketing company.

Economic news good, bad, indifferent

By ROBERT BURNS
AP Business Writer

A drop in wholesale prices last month may be good news for consumers, but an accompanying report on slumping factory output provides more evidence that the economy is still in a recession, economists say.

The stock market also showed no enthusiasm for the latest economic reports Friday. Prices retreated for the second straight day as the volume of shares traded on the New York Stock Exchange failed to top the 100 million mark for the first time in seven sessions.

Despite its sluggish finish, the stock market set a record for weekly trading volume with nearly 600 million shares changing hands in the five sessions. That broke the old record, set in the final week of August, by nearly 50 million shares.

President Reagan was quick to cheer the report that wholesale prices dipped in September at an annual rate of 1.7 percent, but some private economists were less enthusiastic.

Allen Sinai, senior economist at Data Resources Inc. in Lexington, Mass., said the drop in wholesale prices was "clearly the fallout of what the industrial production indicator shows — the economy was still sliding in September."

John Albertine, president of the American Business Conference, said declines last month in wholesale prices and industrial output "are symptomatic of a recessionary economy that cannot quite turn the corner to recovery."

Georgia State University forecaster Donald Ratajczak predicted wholesale inflation would remain moderate for the rest of the year, with the final tally for 1982 coming in under 3.5 percent.

Producer prices — ne merchandising step before the prices paid by retail customers — rose 7 percent in 1981 and 11.8 percent in 1980.

The Labor Department said its measure of wholesale prices fell at an annual rate of 1.7 percent in September. Prices at the wholesale level had risen in August and July.

The Federal Reserve Board said production by the nation's factories and mines fell 0.6 percent in September. That was the 12th decline in the past 14 months and dropped industrial output to the lowest level in more than five years.

The last time output dipped more than in September was in May, when it fell 0.7 percent.

In other economic developments Friday:

—President Reagan cleared the way for the Soviet Union to buy up to 23 million metric tons of U.S. wheat.

FCC orders video game sales halted

Los Angeles Times-Washington Post News Service

The Federal Communications Commission has ordered four major retailers of Colecovision home video games to stop selling models that failed to obtain an FCC approval.

About 50,000 units shipped before Sept. 27 by the game manufacturer, Coleco Industries Inc. of Hartford, Conn., "produce an interfering signal which is four times the maximum limit authorized by the FCC. Use of these games by the consumer could cause interference to nearby television receivers," according to an FCC notice sent last week to Toys "R" Us, J.C. Penney Co. Inc., Montgomery Ward & Co. and Zayre Corp.

Coleco Executive Vice President Morton Handel said Friday that the technical problem on Model 2400 has been corrected, and "we have yet to receive the first consumer complaint."

Coleco agreed last week to pay a $2,000 fine and identify for the FCC "customers who may have substantial inventory," Handel said.

Joseph Casey, chief of the FCC's investigation branch, said in a telephone interview that the $2,000 fine was the maximum his unit could levy without seeking a higher fine directly from the agency's commissioners.

Casey said the FCC did not try to send notices to all Colecovision retailers because "we weren't looking to drive the industry crazy." Nevertheless, Casey insisted that last week's settlement with Coleco did not cancel the notice sent to the four major retailers. "That letter's still in effect . . . . We expect them to take us literally."

At Toys "R" Us, President and Chief Operating Officer Norman Ricken said his company has begun "removing from sale those units which do not have the certification, and we are returning them to Coleco."

Duncan Muir, a corporate information manager for J. C. Penney in New York, said, "We got their letter Oct. 13, so we haven't really had a chance to do a whole lot with it." Muir said the models sold "so fast it's very possible we don't even have any left."

Efforts to reach officials late Friday at Montgomery Ward in Chicago, or at Zayre in Framingham, Mass., were unsuccessful.

Both Muir and Ricken said their companies have a policy of accepting returned merchandise i

customers discover a signalinterference problem with the Colecovision games.

Midland Chamber of Commerce President Larry Bell discusses his travel plans with Margaret Cowden and Sigrid Carter, co-owners of Envoye Travel, Midland's newest travel agency, which is celebrating its grand opening this week in the Summit. Peggy and Paul Anderson are also co-owners. May Chappell is the manager.

Individual investors renewed love affair with stock market

By STEVEN P. ROSENFELD
AP Business Writer

NEW YORK (AP) — Individual investors renewed a love affair with stocks this past week as the Dow Jones average of 30 industrials leaped over the 1,000 mark and trading records fell.

"I haven't seen this kind of interest in more than a year," said Carolyn Cole at Paine Webber Inc. The last such flurry of activity was in April 1981, she said, when the Dow Jones industrials reached an eight-year high of 1,024.05.

Analysts said investors were encouraged that declines in interest rates and inflation have raised prospects for an economic recovery. But at the same time, they remained concerned that the highest unemployment rate in 42 years would sap consumer confidence, postponing a long-awaited resurgence in spending for homes, cars and appliances.

As a result, analysts said that while individuals returned to the stock market, there was no one-sided drive to either buy or sell.

"It's a public that has arrived, but a more thoughtful public," said Larry Wachtel at Bache Halsey Stuart Shields Inc. "It's not reached a frothy state yet."

For more than a decade, trading on the New York Stock Exchange has been dominated by institutions such as pension funds and insurance companies. Individuals now account for less than 30 percent of the dollar value of Big Board trading.

But clear signs emerged this past week that retail trade, or orders to buy or sell 900 shares of stock or less, was picking up steam.

On Tuesday, for example, the NYSE ticker tape ran a record 65 minutes behind trading. The tape, which advances at a top speed of 900 characters a minute, gets backed up on days when numerous smaller orders combine with heavy trading.

"It indicates the public is biting more in the market now," said economist Allen Sinai at the private consulting firm of Data Resources Inc.

Economist Frank Mastrapasqua at Smith Barney, Harris Upham & Co., said appreciable declines in interest rates since July have made stocks more attractive.

Until recent weeks, high interest rates made borrowing to buy stock costly, while higher yields were available from bonds and money-market mutual funds.

The rally, said Mastrapasqua, "tells us rates have come down enough to sow the basis for a recovery."

Monte Gordon at Dreyfus Corp. said people buy stock to share in a company's profits.

He said the buying surge that lifted the Dow Jones industrials more than 30 percent from a two-year low of 776.92 on Aug. 12 to a 17-month high of 1,015.08 on Wednesday reflected "a significant change in outlook from uncertainty on a recovery to belief there will be a recovery and that it could be of dramatic proportions."

Meanwhile, trading volume continued to build.

During Thursday's session, volume on the Big Board exceeded the record 11.85 billion shares traded in all of last year. Volume so far this year stands at 12 billion shares.

Volume for this past week leaped to 592.46 million shares from 488.31 million a week earlier and surpassed the previous record of 549.90 million established in the week ended Aug. 27.

An unprecedented six straight sessions of trading of more than 100 million shares ended Friday, when 80.29 million shares changed hands. There have been 13 days in which more than 100 million shares have traded on the NYSE, all of them since Aug. 18.

So hectic was business that the NYSE scheduled a rare Saturday opening to allow firms to take care of paperwork before next week's trading begins.

But while trading has been consistently heavy, stock prices followed a zigzag course.

The Dow Jones industrials average ended the week at 993.10, a gain of 6.25 points. The blue-chip average rose 25.94 points Monday, fell 9.11 points Tuesday, regained 11.40 points Wednesday, gave back 18.21 points Thursday in its steepest slide in more than eight months, and fell 3.77 points Friday.

The NYSE composite index of all its listed common stocks rose 1.74 from a week ago to 76.74, and the American Stock Exchange market value index rose 14.74 to 313.88.

To veteran analyst Alan Poole at Laidlaw Adams & Peck Inc., the rampant trading is confusing.

"I've been on the street since 1937 and I've never seen anything like it in my life," he said.

Poole said he expects the market to gain more ground through the end of the year. But he cautioned, "If the economy doesn't show any signs of recovery by January or February, we're in for some trouble."

Tenneco hits big in North Sea

HOUSTON (SWN) — An exploratory well in the Norwegian sector of the North Sea in which Tenneco Oil Co. holds a 25 percent interest has tested significant amounts of natural gas and consensate, Tenneco reports.

The Statoil 30/2-1 flowed in three different tests at rates ranging from 24 to 36 MCF of natural gas per day and 1,950 to 2,596 barrels of condensate per day through 1/2-inch and 3/4-inch chokes.

Statoil, Norway's national oil company, holds 50 percent interest in the well and is operator. The remaining 25 percent is held by Union Oil Company of California's Norwegian subsidiary.

Kiowa selling mud

The "down market" in the oil industry has not deterred a new company, Kiowa Drilling Fluids, from coming on stream. President John Wolfinger said of the opening of Kiowa, "We started this business now (in the depressed market) because we think it is the optimal time.

"Drilling fluids as well as the other oil service businesses can be more accurately gauged now because the rig count is more realistic. The oil industry will come back stronger and we will be positioned in a manner that will allow us to take advantage of it."

In Midland, the Western Regional Sales office is headed by a veteran of the drilling fluids business, Doug Thomas. Thomas has been in sales and management in the Permian Basin oil fields since 1954.

The Kiowa Drilling Fluids' slogan is "On The Warpath". Wolfinger explains, "We chose this slogan for our company because it illustrates our positive, aggressive attitude about the drilling fluids business."

Kiowa Drilling Fluids' main office is in Houston, with regional offices and warehouses in Midland, Bryan, and West Columbia, Texas.

Tax planning and charity

By JOHN C. BURKE

Charitable contributions, in addition to being commendable acts, also provide income tax benefits to the persons making them. A program of charitable giving can save substantial tax dollars.

In order to be deductible, charitable gifts must be made to qualified organizations. Examples of qualified organizations are religious organizations, schools and colleges, and charities such as United Way, Salvation Army and other similar organizations.

When giving your services to a charity, no deduction is allowed for the value of your contributed personal services. However, certain unreimbursed expenses incident to your services are deductible. For example, if a uniform is required to be worn while performing charitable service and that uniform cannot be worn as personal clothing then the cost of the uniform is deductible. Also out-of-pocket transportation expenses necessary in rendering your services are deductible. In lieu of actual expenses, the Internal Revenue Service allows a standard mileage rate of nine cents per mile.

There are also special rules for gifts of appreciated property. If you give appreciated property (that would have resulted in long-term capital gain if sold) to a public charity, a deduction is allowed for the full fair market value of the property. On the other hand, if the appreciated property would have resulted in either short-term gain or ordinary income if sold, your deduction is limited to your adjusted cost basis. If tangible personal property, that would have yielded long-term capital gain if sold, is donated and its use is unrelated to the donee's tax exempt function, then your contribution must be reduced by 40 percent of the appreciation.

A question often asked accountants is "How much can I deduct?" An individual who itemizes can deduct up to 50 percent of his adjusted gross income for gifts to qualified charities. For gifts to most private foundations the limit is 20 percent. Gifts of appreciated property are subject to special rules. If you give property that, if sold, would generate a long-term captial gain, then you are subject to a 30 percent of your adjusted gross income limitation. Generally, contiributions not deducted, because of these limitations, are carried over.

Proper planning of contributions can result in a double benefit, that is, a current deduction and lower capital gains in the future. If you are planning to make a contribution, and you own stock which would have a long-term capital gain if sold, you should consider a gift of the stock. The following example illustrates the reasoning for gifting stock rather than cash:

Assume long-term stock is owned with a fair market value of $5,000 and a cost of $1,000. A gift of stock results in the same deduction as a gift of $5,000 in cash. With the $5,000 of cash not contributed, the stock could be bought on the open market. Ownership of the same number of shares of stock is reestablished, but rather than a $1,000 cost basis, a $5,000 cost basis carries forward to reduce any future gain. The effects would be greater if larger figures were used in the example. Conversely, if loss stock is owned, it should not be used for gifting purpose. In that situation you would sell the stock at a loss and contribute the cash proceeds.

Through planning and foresight charitable contributions can substantially affect your tax situation. Since the end of the year is fast approaching, now is a good time to start thinking about making contributions and the form such contributions should take.

Permian Basin Oil Show opens on Wednesday

By David C. Sodamann
Energy-Business Editor

If you live south of the Matador Arch, west of the Eastern Shelf and north of the Sierra Diablo Platform, know it or not, you're in the oil business. This week you'll have your chance to celebrate your good fortune.

The area just described, in geological terms, is the region surrounding us; what we call the Permian Basin. It's a region known primarily for one thing — oil; and lots of it. If you live here, you're in the oil business.

Wednesday is opening day for the Permian Basin Oil Show, a biennial celebration of the business that made this area great. More than one-half million people are expected to visit the exhibition, which is, in many ways, just like an old fashioned fair.

The Permian Basin Oil Show is, first of all, a trade show. It's a chance for people with products and services offered to the oil industry to meet potential customers and renew old ties.

It is also an entertaining and educational exhibition, where those lacking a thorough knowledge of the petroleum industry can come to learn a little more about *their* business.

The oil show is also a chance to relax, enjoy one's self, be with friends, swap tall tales, and just feel good about being in the oil business.

The Permian Basin Oil Show is the oldest and largest exhibition of its kind. It began in 1940, when 50 exhibitors set up their wares in an Odessa park for a show in conjunction with the second annual meeting of the Permian Basin Association. The association was founded in Colorado City in 1939.

The second show was in 1941. There were no shows during the war years.

In 1950 the gates opened on another oil show in Odessa's Floyd Gwyn Park. Lloyd French, president of French Tool and Supply, was in charge. He was back again in '52, making him the only man in the history of the show to head the organization for more than one term.

The oil show was formally incorporated in 1953. The following year the show moved to fenced grounds around Ector County Coliseum, which was being built at that time.

All but one of the exhibition buildings around the coliseum were moved there for the Permian Basin Oil Show in 1954.

Over 500 exhibitors will be hawking goods and services at this year's oil show. They hail from 53 Texas cities and 24 states; coming from as far away as Washington, Illinois and New York. Almost everything to interest an oilman from the bottom of a boot to the top of a derrick will be there to be seen.

The Permian Basin Oil Show is one of the most popular of its kind. Space, however, is limited, so many businesses wait years for the chance to exhibit.

That wasn't always the case.

Until the mid-1970s there was room to spare. Exhibit spaces

your show ...

(Continued from page 1AA)

were sold almost up to show time. The coliseum proper wasn't open to exhibitors until 1976. When it was finally made available to exhibitors, the space was sold out within a month. When the 1978 oil show rolled around, an exhibitors' waiting list had to be established. There simply wasn't enough room for all who wished to take advantage of the opportunity.

The list has been growing every year. When an established oil show exhibitor drops out, the space is offered those at the top of the list, until a taker is found.

Fifteen of the exhibitors at this year's oil show were there for the first in 1940.

The Show opens at 10 a.m. Wednesday morning and runs through Sunday afternoon. Wednesday and Thursday the show will be closed to all but those directly employed in the petroleum industry, to give them a chance to get business out of the way without distraction. Friday and Saturday the gates will open to all.

The show ground gates will be patrolled by oil show officers and police Wednesday and Thursday. Only those big enough to hold down a job in the industry will be admitted.

There's not a better place in the world for an exhibition of the Permian Basin Oil Show's magnitude. The Permian Basin today produces more oil and natural gas than any other region of the nation. Roughly one out every seven producing oil and gas wells in the United States can be found within a 150 mile radius of Midland. Those wells yield about one-fifth of all hydrocarbons produced nationwide — including that produced in the great Alaskan Fields.

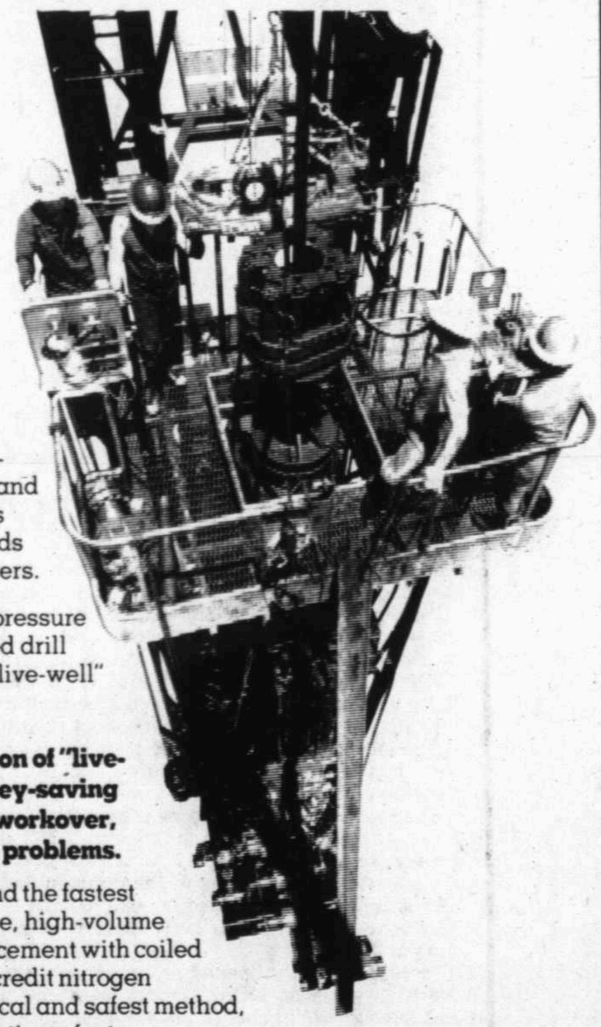
For "live-well" service
Permian Basin operators
count on the Professionals.

Experience and
Expertise in
- Snubbing
- Coiled Tubing
- Nitrogen
- Well Control



Snubbing has proven to be the only acceptable means of solving certain downhole problems involving pressure.

Drilling bridge plugs, circulating out sand or bauxite, and milling shale plugs, speeds completions and often avoids costly conventional workovers.

Pulling tubing under high pressure or snubbing under-balanced drill pipe, our customers know "live-well" experience really counts.

Cudd's unique combination of "live-well" services offers money-saving applications for drilling, workover, completion or production problems.

Permian Basin operators find the fastest way to bring in low-pressure, high-volume gas wells is through displacement with coiled tubing and nitrogen. They credit nitrogen jetting as the most economical and safest method, and clean-up is usually five times faster than conventional techniques.

And operators also credit Cudd with the service quality, modern equipment, and "live-well" experience to do the job right, reducing formation damage and enhancing production.

For more information on the true economics of "live-well" completions, stimulations, workovers, and well servicing, contact your Cudd professional in Odessa and get the facts you can count on.

Call us at 335-0677 or 333-4873 and come by our exhibit, booth J-28 at the 1982 Permian Basin Oil Show.

The Oil Industry Needs An Industrial Show

Industry Personnel Invited October 20 – 21

Management, Engineers, Purchasing Agents, Foreman, Superintendents, Field Workers. The 1982 Permian Basin Oil Show offers valuable opportunities for you and everyone connected with the oil industry.

It is your chance to keep pace with what is happening in the industry and exchange ideas. You'll be exposed to the largest display of inland oil products and technology in the world today.

Visit, Listen, and Learn what is new in the industry. Don't miss this opportunity during the first two days of the show; October 20th and 21st are reserved for you.

General Public Invited October 22 – 23

The oil industry affects each and everyone of us in the Permian Basin. It is the lifeblood of our region. It is an exciting part of our lives.

The Permian Basin Oil Show has always felt a need and a responsibility to include *all* the people, near and far, to see what the industry is all about. Two days, October 22nd and 23rd are specially designated for public attendance at the show.

Friday or Saturday, bring your family and your friends. Visit the show. Learn more about this exciting industry. Don't miss *your* day at the Permian Basin Oil Show,

For additional information contact:

October 20–21 – Petroleum Personnel Only – No Children Allowed

Wallace honored

Wallace

Mack Wallace, 52, a member of the Texas Railroad Commission, is the honoree for the 1982 Permian Basin Oil Show.

He was appointed Railroad Commissioner by Governor Dolph Briscoe in September 1973. Subsequent to his appointment, Wallace was elected to serve the remainder of the term for which he was appointed, and in November of 1978, Wallace was elected to serve a full six-year term. He was elected Chairman of the Railroad Commission on January 1, 1977, a post he held until December 31, 1978.

Wallace is a graduate of the Baylor University School of Law. After four years in private law pactice, he was elected Henderson County Attorney in 1957. From 1962 until 1973, Wallace served as District Attorney for the Third Judicial District of Texas.

In January 1973, Wallace was appointed Legal Counsel to the Governor. In April of that year, he was appointed Executive Director of the Governor's Criminal Justice Council, where he served until his appointment to the Railroad Commission.

Serving as the Governor's Represenative, Wallace chaired the Interstate Mining Compact Commission from January 1 to December 31, 1980, and is presently serving as Chairman of the Compact's Legal Committee.

He is also Co-chairman of the Legal Committee and Chairman of the Ad Hoc Committee on Production Policies of the Interstate Oil Compact Commission, Chairman of the Texas Mining Council, the Texas Solar Advisory Committee, and a member of the Texas Energy and Natural Resources Advisory Council, Wallace chaired the Emergency Energy Preparedness Committee and the advisory Committee on Lignite Research, Development and demonstration, and served as a member of the Advisory Committee on Nuclear Energy.

Until January 1, 1979, Wallace also served as a member of the Texas-Louisiana Steering Committee for the development of geopressured geothermal energy. On October 2, 1981, Wallace was appointed to serve a three-year term on the Advisory Committee of the Center for Energy Studies of The University of Texas at Austin.

Wallace and his wife, Carol Ann, have two children; a son, John, and a daughter, Leslie.

U.S., Canada plan tar sand venture

From Hearst Washington Bureau

WASHINGTON – Canada and the United States plan to work jointly to improve methods for recovering heavy oil and tar sand oil.

According to a new agreement between the two nations, each country will provide $600,000 over the next two years to conduct a laboratory-scale research program, starting with small-scale tests of various processes in the U.S. and advancing to larger-scale Canadian tests in simulated heavy oil and tar sand reservoirs.

The joint project will focus on improving today's methods of injecting steam into deposits of heavy crude oil and tar sand oil to thin the thick oil, making it easier to pump to the surface.

Currently, some 600,000 barrels per day of heavy oil and 200,000 barrels of oil from tar sands are produced commercially in both countries.

Experts agree, however, that much larger amounts could be extracted if more effective steam recovery processes can be developed.

Researchers hope that their findings will lead to higher recovery of oil from deposits that currently are difficult, or impossible, to tap with conventional technology.

In addition to the cooperative agreement, the two nations agreed to exchange technical information on heavy oil and tar sands, including provision for visits by scientists from each country to the other's field and laboratory test sites.

OIL FACTS

Lyne T. Barret drilled Texas' first oil well near Nacogdoches in 1866. The state became the nation's number one oil producer in 1928.

Texas produced 4.4 percent of the world's oil in 1980; 7.2 percent in 1970; 12 percent in 1960; and 22 percent in 1950, says the Texas Mid-Continent Oil & Gas Association.

Martin-Decker shows new weight indicator, gauges

At the Permian Basin Oil Show, Martin-Decker will display a number of new products including a new pad-type Mast Leg Weight Indicator system which utilizes two compression load cells as load sensors.

Also new is a 1:1 Piston Separator which acts as a pressure sensor for pressure gauges used in mud pressure, cementing, acidizing or fracturing operations. The separator mounts on any 2" connection and effectively separates pump fluid from hydraulic fluid which actuates the pressure gauge.

A third display will be a new Drilling choke which can be activated any one of three ways: using the air/hydraulic pump; using the back-up hydraulic hand pump; or using the emergency mechanical hand crank. Drilling Choke Console features two large 8 1/2" pressure gauges for precise reading of drill pipe and casing pressure plus a pump stroke indicator which shows both total strokes and strokes per minute.

An M/D-3200 Drilling Rig Data Processor which monitors and displays 29 separate drilling parameters will also be shown. The M/D-3200 is completely self prompted for easy operation. The processor has a "HELP" button which will ask the operator what he wants to accomplish, then tell him exactly how to do it. The display, processor and printer are usually installed in the company man's trailer for greater convenience and ease of input.

A rig floor recorder will be shown plus a new stainless steel driller's panel, plus a vertical rental mud console and complete driller's console. Instruments displayed on the three consoles will include weight indicators, SPM and RPM meters, pump pressure, tong line pull and rotary torque gauges, mud volume totalizers, mud flow-fill indicators, automatic drillers and electric recorders.

OIL MEN SAY:

Do your homework on your own operations. Be able to quote facts and figures on how these punitive attacks (by Congress) affect everyone, instead of simply saying, 'If you do that we're down the tubes.' We must show Congress that the actions it has taken, and is contemplating, will put us right back onto the 'Energy Dependence on OPEC Toboggan.' We must increase — not relax — our vigilance. No longer can we assume that our 'friends' in Congress will defeat negative legislation whenever it is offered.

— Ed Thompson, executive vice president of the Permian Basin Petroleum Association, in a column in the August, 1982, issue of Drill Bit magazine.

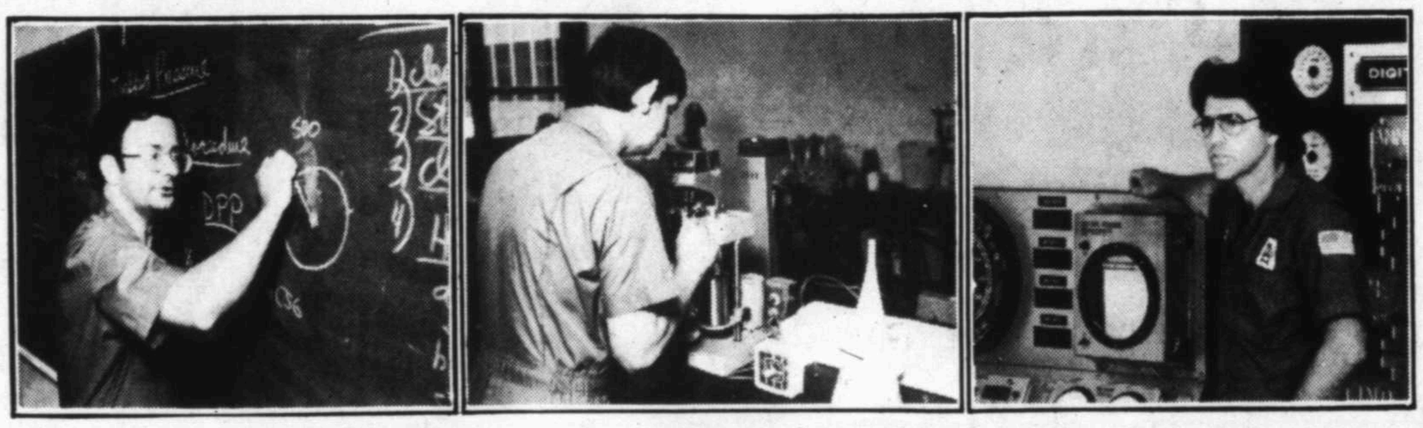
GOOD TRAINING JUSTIFIES ITSELF



PRENTICE AND RECORDS ENTERPRISES, INC., recognized as worldwide specialists in technical petroleum training, can help you justify all your training needs. Here's how:

ECONOMICS: *In cost comparison studies Prentice and Records offers among the lowest priced-per-day courses presently available.*

PRACTICAL: *All of Prentice and Records courses are taught using practical application of established procedures in the areas of Drilling, Completion, Production and Workover Techniques.*

QUALITY: *Above all, Prentice and Records is committed to offering the finest courses available for proper time-saving procedures with maximum safety at minimum cost.*

PRENTICE AND RECORDS ENTERPRISES, INC., offers over 25 courses-worldwide-year round. Call or write for our course catalog, 1-(800)-551-3052, in LA 1-(800)-252-3398, P.O. Box 53557, Lafayette, LA 70505.

RRC, Basin growing together

AUSTIN — Only three years before the Permian Basin's T. and P. Abrams No. 1 began producing in Mitchell County, the Texas Legislature classified oil and gas pipelines as common carriers and gave the Railroad Commission jurisdiction over them. As the Commission grew into an important force in the Texas oil and gas industry, the Permian Basin gained recognition as one of the world's great petroleum reservoirs.

In 1922 the first pipeline in the Permian Basin began carrying oil and the relationship between the producers in the area and the Commission was cemented.

Today, through its Oil and Gas Division, the Commission helps to conserve the state's natural resources and prevents their waste, protects the rights of mineral interest owners to recover their fair share of the oil and gas in a reservoir, and portects the environment from any pollution associated with oil and gas activity. Activity in the Permian Basin is a major contributor to the Commission's workload. In 1981, 80,266 producing oil and gas wells in the Permian Basin in Texas were regulated by the Commission.

A range of state and federal laws and programs spell out the Commission's jurisidction and responsibilities. For example, the Texas Natural Resources Code gives the Commission jurisdiction over common carrier pipelines and the drilling and production from oil and gas wells. The Texas Water Code gives the Commission authority over the companies who haul salt water produced from oil and gas wells and also over salt water disposal wells.

The Commission sets allowables (the amount of oil or gas which a well or lease is allowed to produce) and adopts general statewide and specific field rules to govern drilling, production, operation, and abandonment of oil and gas wells.

In 1981, 1,883,032,436 Mcf of gas and 521,658,547 barrels of oil (crude oil and condensate) were produced in the Permian Basin under these rules and regulations. The Oil and Gas Division conducts hearings and on-site inspections to enforce Commission rules.

The division's ten district offices located around the state are vital to the Commission. The Permian Basin in Texas is part of four different RRC districts. All of district 8, based in Midland, falls within the boundaries of the Permian Basin. Most of District 8A, based in Lubbock, and District 7C, based in Abilene, is considered in the Permian Basin. Three District 7B counties, Stonewall, Fisher and Nolan, are in the Basin. The District 7B office is located in Abilene.

These field offices are home base for the inspectors who monitor oil and gas drilling and production. District offices also handle applications and other forms which must be submitted by operators.

The Commission received additional responsibilities from the federal government in 1978 with the passage of the Natural Gas Policy Act. Under the NGPA, the ceiling price of natural gas varies according to the depth of a gas producing formation, well drilling date, distance from other wells, volumes of gas produced, and other factors. The Commission determines the category a gas well should be placed in and then that classification is reviewed by the Federal Energy Regulatory commission. The NGPA section of the Oil and Gas Division also recommends to the FERC which formations should be designated as "tight" (low porosity), another factor which is considered in determining the ceiling price for gas. The section has recommended nine formations in the Permian Basin for "tight" designations. Canyon Sandstone; Strawn-Detrital, University Block 31; Wolfcamp (Gomez, N.W.); Clearfork; Wolfcamp (Wolf Field); Cisco Sandstone; Cisco-Canyon in the area of Conger, S.W. (Penn) Field; Cisco Sandstone in Sallie Field; and Cisco, Upper (Credo, East, Field) have been recommended.

Six of those designations have been approved by the FERC. They are Canyon Sandstone; Wolfcamp (Wolf Field); Wolfcamp (Gomez, NW.); Cisco Sandstone in Sallie Field; Cisco, Upper (Credo, East, Field); and Cisco-Canyon in the area of Conger, S. W. (Penn) Field.

After a review of Commission regulations by the Environmental Protection Agency, the Commission was given authority to regulate saltwater disposal wells and secondary recovery injection wells. There are 527 salt water disposal wells now operating under the Commission's jurisdiction in the Permian Basin, and the use of secondary recovery injection wells is widespread in the area.

The number of tertiary enhanced recovery projects in the Permian Basin, especially those using CO_2, is on the rise. The Commission is the agency in Texas which certifies these projects. Certification may be required for production to be considered for pricing incentives under the Internal Revenue Code and the Windfall Profits Tax Act.

The underground injection control section of the division handles all underground injection activities for the commission.

OIL FACTS

Steps in Exploration

1) Collection and study of preliminary geophysical and geological data.
2) Leasing of mineral rights and access right of ways.
3) In-depth geophysical and geological operations.
4) Site preparations for drilling.
5) Drilling operations.
6) Plugging and abandoning the hole if it's dry, or not commercially feasible to produce, or, completion of the well if a strike is made.
7) Delineation of the field by drilling at intervals, if the strike is promising.

It is his job to convince Congress to decontrol gas

By WILLIAM GARLAND

From Our Washington Bureau

WASHINGTON — The job of Nicholas J. Bush, president of the Natural Gas Supply Association in Washington, is to convince Congress not only that decontrol of natural gas would be good for oil and gas companies, but that it also would unravel costly tangles in the natural gas delivery system.

The NGSA is the major group in Washington exclusively representing natural gas producers.

Under current controls in the Natural Gas Policy Act of 1978, which permits higher prices to some categories of gas production and restrains the price on other production, the market price is not known for certain by anyone.

The powerful Northeast-Midwest Congressional Coalition, with its more than 200 members, wants to alter the current market price for gas in the coming special session of Congress by doing away with current contract provisions. But Bush sees that as a no-win situation.

"I doubt anything will happen as a result of that," he said. "I don't believe anything substantive will pass."

Rep. Clarence Brown, R-Ohio, considered by many congressmen on Capitol Hill to be both authoritative and objective on natural gas issues, is one of the congressmen backing action during the special session. He wants to immediately outlaw "take or pay" provisions in contracts for natural gas by allowing pipelines to back out of contracts any time there is a surplus.

Provisions for "take or pay" currently lock the pipelines into buying gas even if they have an oversupply.

But Bush said that the problem, too complex to be solved in a short special session, should properly be handled in a comprehensive natural gas bill, covering the issues from contracts to controls.

"We're opposed to any attempt to address the natural gas problem in a piece-meal fashion," he said.

Along with others preparing for next year's battle on natural gas, he sees the support of President Reagan as crucial.

"In 1983, in the 98th Congress, I believe the administration and the president will send a bill that would call for the phased decontrol of natural gas," said Bush. "The president has indicated that. Every person we speak to in the administration indicates that a bill will be coming in early 1983."

Bush is not allowed the leeway to say that natural gas prices might even go down without the complications of controls under the Natural Gas Policy Act of 1978. He cannot predict future prices of natural gas, in much the same way the American Petroleum Institute, representing major oil companies, does not make predictions about future oil and gas prices or supplies. Credibility would be tarnished if the future did not hold the foreseen results.

What Bush can say is that, with decontrol, "gas will go to the market clearing level and gas would be priced equitably."

In a recent issue of the industry trade publication Oil Daily, the efforts by Bush and the NGSA are called "decidedly more muted" than their efforts on decontrol last year.

Bush disputes that. "We have an educational program under way to show the Natural Gas Policy Act is not the proper vehicle to get decontrol," he said.

The association possibly will support a bill similar to that drafted earlier this year by Rep. Phil Gramm, D-College Station. Gramm has been trying persistently to get all the sides together in the industry and produce a bill that can muster industrywide support.

One of the hang-ups is future policy on "old gas," which would remain under controls indefinitely under the NGPA. Bush, representing producers of gas, is eager to see that as any part of the comprehensive gas bill.

It had been speculated that a possible trade-off with producers might be a windfall profits tax, similar to that on crude oil, if there were complete decontrol. Bush and other producer-oriented groups have not accepted that, and point to the promise by Reagan to veto any such tax.

However, conflicts in natural gas contracts between producers and pipelines might be the new tool of compromise.

"We've agreed to talk about (contracts) as a part of the whole package," said Bush.

Oil well completion business booming

DENVER — Reported completions of wells drilled for oil and gas in the United States totaled 64,214 in the first nine months of this year, Petroleum Information reports. The total is 9,949, or 18.3 percent, above the comparable figure for 1981.

An all-time annual record for reported well completions was set in 1981. Despite strong and continued downturns in drilling activity since the first of the year, it now appears that the 1982 total will come very close to, and could possibly exceed, the 1981 record.

Drilling in 1981, as measured by drilling rig employment, built steadily throughout the year. As a result, a record number of wells were being completed or awaiting completions as 1982 began. The resulting backlog of completions, which could not be counted in 1981 since status as to oil, gas or dry could not be determined, largely accounts for the excess of reported completions this year over last. In addition, the active rig count through the first quarter of 1982 stayed substantially above that of last year.

Historically, some 74 percent of the well completions recorded within a year have actual completion dates within that year. This percentage has not changed, but the number of wells has increased due to 1981's unprecedented drilling levels.

Comparatively fewer completions are expected to be recorded in the remaining months of 1982 than was the case in 1981.

The first nine months' completions included more than 305.98 million feet of hole drilled. Of the total completions, 31,057 were oil wells; 13,321 were gas wells and 19,836 were dry. Footage and all three categories of completion — oil, gas and dry — ran ahead of 1981 third quarter levels, PI noted.

New field wildcat completions — purely exploratory work — totaled 7,459 for the 9-month period, versus 6,372 for the same period a year ago. Of those wildcats completed, 845 found new oil fields and 572 found new gas fields for a succes rate of 19 percent. The new field wildcat success rate for the same period in 1981 was 18.4 percent.

Completions classified as other exploratory — field extensions or new pay zone tests — totaled 5,898 for the three quarters. The same figure in 1981 was 4,617 completions. Of those completions in the other exploratory category, 1,503 found oil and 1,199 found gas for a success rate of 45.8 percent, versus 46.7 percent in 1981.

Development drilling — to exploit known reserves — as reflected in completions was up 17.5 percent from the same time a year ago. PI recorded 50,857 development completions during the 9-month period.

The top drilling state continues to be Texas, with a total of 20,314 completions for the three quarters, accounting for more than 105.7 million feet of hole drilled. Texas completions were 3,294 higher than at the same time in 1981, a 19.4 percent increase.

Other leading drilling states are: Oklahoma, 8,900 completions (up 17 percent); Kansas, 6,574 completions (up 35.9 percent); and Louisiana, 3,960 completions (up 55.6 percent).

Petroleum Information Corporation is a wholly-owned subsidiary of A.C. Nielsen Company. It offers comprehensive reporting services, data and data analysis, maps and exploration and engineering consultation to the petroleum industry.

Texas stripper production up in 1981

DALLAS — Production of crude oil from stripper wells in Texas continued to increase in 1981, according to a survey completed recently by the National Stripper Well Association.

A stripper well is one averaging 10 barrels of oil a day or less. Output from these wells in Texas reached 145.9 million barrels in 1981, an increase of 4.1 million barrels over 1980 production. This continued a trend that had gotten under way when higher crude oil prices occurred after the Middle East oil embargo in the winter of 1973-74. For example, the 1980 level was an increase of more than 5 million barrels over 1979 and 1979 output was an increase of more than 5 million barrels over 1978's production.

"This trend to greater production shows clearly that Texas production could and would increase in response to increased incentives," said Joseph K. McMahon, an independent producer in Wichita Falls and vice president of the National Stripper Well Association.

"It also disproved the argument made at the time that there was no more oil to be found or that producers would not plow back increased revenues into a search for more oil," he said.

"I think that federal government officials and the general public are beginning to realize these economic facts of life. That is, if we want more domestic oil production, we need to provide the incentive and remove barriers of the past that denied that incentive," McMahon added.

He said congressional action last year to exempt independent producer stripper well production from the so-called windfall profits tax, effective January 1, 1983, was a clear cut indication of a growing awareness of the need for greater incentives.

Increased stripper well production in Texas and other states has boosted the economy in those states at a time when the economy in general has been moving into a recesson.

Increasing production has also helped boost state oil tax revenues, thereby enabling states to continue with essential programs.

The decline in world oil prices over the past year has somewhat offset these gains, both in state tax revenues and employment, but the over-all beneficial impact of higher production still is highly important to the economy of the nation and especially to the producing states.

The National Stripper Well survey, a joint project of the Interstate Oil Compact Commission and the National Stripper Well Association, also shows that in Texas, the number of stripper wells in operation climbed to 107,596 in 1981, an increase of 4,002 wells over 1980's level. There were 1,948 wells abandoned in Texas in 1981, up 10 wells over 1980.

Average production per day per well was 3.72 barrels in 1981, down slightly from 3.74 BOD the previous year. Declines in per well production indicate that wells are being kept in operation longer.

The survey shows that 1981 production nationally increased by more than 25 million barrels over 1980. In addition to Texas, substantial increases were reported in California, Oklahoma, Kansas, New Mexico, Ohio, and most other states with stripper oil production.

No room at the oil show grounds; Pump jack to be shown across street

Advanced Pumping Systems of Lafayette, Colorado, will introduce the first universal Advanced pumping unit for oil field applications during the Permian Basin Oil Show. Due to its new introduction to the industry, Advanced Pumping Systems was unable to obtain display space within the show grounds. Special arrangements have been made to display directly across the street from the show at 4208 Andrews Highway. The Advanced model 365-168 will be on display at this location Oct. 18-23.

The concept of the pumping unit is based upon a universal design which allows it to be precisely adjusted to specific pumping conditions. It has been computer designed for absolute minimum gear reducer and prime mover needs throughout a full range of applications. Only two Advanced universal pumping units are required to handle a range of pumping needs which previously required over 35 different sized conventional units.

Each structure accommodates four interchangeable API-certified herringbone gear reducer sizes. A unique crank design allows fine tuning to any exact stroke length. It offers a typical torque reduction of 35 percent as compared to ordinary units and its softer upstroke maximizes sucker rod life.

Counterbalancing is simple — only one type of master and auxiliary weights are necessary for all applications. The design specifications exceed engineering requirements of the API.

Advanced Pumping Systems was formed by a group of aerospace design engineers and oil industry production systems' specialists. According to Thomas G. Hoh, vice president of research and development, "This is the first universal pumping unit ever introduced and we have applied for several patents on its engineering design."

He said the unit offers a significant reduction in harmful load reversals, a common problem with conventional gear boxes, and also minimizes sucker rod fatigue.

Advanced Pumping Systems will handle primary assembly of the pumping unit structures, gear boxes, castings and components at its Lafayette, Co., and Odessa, Texas, subcontractor facilities. Final assembly will be made on well sites.

Production units are expected to be ready for national distribution by December of this year.

The company will concentrate on the larger sized pumping units to meet increased market demand in that area. Advanced Pumping Systems has forecast a shortage of larger-sized pumping units in early 1983 because of a projected increase in drilling activity, an expanding international market, and a new demand for larger units created by the federal government, when it offered windfall profit tax relief to oil operators for tertiary recovery.

Two Chromalloy divisions reorganized

Two Odessa divisions of Chromalloy American Corp., serving related segments of the energy industry, have been reorganized and merged into one. The Wells Companies and Meter Service and Supply (Metserco) have been combined into the newly formed Chromalloy Compression and Measurement Service Company. Frank Pickett has been named president of the new company, which will employ 215.

The reorganization took place recently as a result of efforts to improve efficiency in both operations.

"The target markets are similar," Pickett said. "Both firms supply goods and services to the gas producing and process industries."

Wells recently made the decision to confine its product mix to new and reconditioned replacement parts for gas engines and compressors. Wells products include crankshaft bearings, power cylinders, compression pistons, power cylinder heads, pressure vessels and other related products.

Wells Technical Services' facilities have been relocated in the former Kelly Welding Industries plant in the 2700 block of North Golder, Odessa, not far from Wells' main plant in the 600 block of West University.

Meter Service and Supply (Metserco), a Chromalloy company since 1977, originally specialized in repair of oilfield measurement equipment and instruments, and now manufactures an extensive line of its own. In recently completed facilities off West University, Metserco produces static pressure recorders, differential pressure recorders and meter loops. Components, available separately and often made to original manufacturers' specifications, include chart drives, bellows, pressure elements and inking devices.

Metserco also operates an oilfield measurement and instrumentation repair and service center at 2120 Kermit Highway, and an industrial equipment gasket production facility.

Chromalloy American is a Fortune 500 company.

CECO showing trunked technology

Communications Engineering Company (CECO) is an authorized General Electric sales and service representative ready to meet all its customers' two-way radio communication system engineering requirements.

Exhibit highlights this year at the Permian Basin Oil Show will include a complete line of General Electric 800 MHz GE-MARC V "trunked" equipment as well as the popular-priced Phoenix equipment line for everyday, everywhere dispatch needs.

Improved spectrum availability and a higher grade of service are now possible through the application of trunked technology to business radio. Trunked systems, for example, allow automatic access to multiple clear channels rather than the single shared channel available in conventional systems.

The resulting advantages include rapid channel assignment, enhanced system privacy and little time lost from interruptions or monitoring.

Automatic channel access is provided by GE-MARC V, which eliminates the need for monitoring or waiting for an available clear frequency — benefits not possible with conventional business radios.

The system allows users to segment their vehicles into fleets, subfleets or individual units, each with the privacy from the other, but accessible to selcted personnel.

The GE-MARC V system assigns a dedicated clear channel to each user for the duration of every call, eliminating "stepped-on" messages. The line offers a choice of four control stations based on frequency and options needs.

The Phoenix mobile radio emerges as the true value choice in today's bewildering array of supposedly basic business radios. An obvious indication of its quality is its clean, uncluttered design — the absence of "rat's nest wiring" typically found in other radios. In addition to the clean interior design, Phoenix is compact and good looking to complement the interior of any vehicle. It is offered in one-channel transmit and receive in VHF, and two-channel transmit, one channel receive ("talkaround") in UHF.

Phoenix is distinguished from other business radios because it's based on a design approach where required features — such as channel guard — are built in, not added on.

All Phoenix radios are not only designed and manufactured in America, but computer-aided manufacturing processes are used to assure top quality.

The Phoenix line includes external options which allow it to be used as an attractive desk top control station.

Basin's largest machine shop to be represented at oil show

Miether Machine Works Inc. of Odessa will be displaying its products at Oil Show Booth C 33-34.

In addition to having the largest machine shop in the Permian Basin, Miether manufactures an improved Classic A Overrunning Clutch and all accessories. The availability of components, the company's rebuilding facilities and its full line of accessories make Miether a one stop source for overrunning clutches.

Miether offers a complete repair service for mud pumps, fluid ends, drawworks, compounds, crown blocks, traveling equipment and components of these pieces.

It also repairs centrifugal pumps, turbochargers, and does custom machining both in its plant and in the field. Miether's stress relieving oven, balancing machines, inspection facilities, engineering staff and sales staff are all dedicated to solving customer problems. Its products group manufactures overrunning clutches, solid steel housed pillowblocks, split steel and cast iron pillowblocks, and flange cartridge housings for spherical roller bearings.

Permian oil show important to Texas Iron Works

The 1982 Permian Basin Oil Show is particularly important to Texas Iron Works, because the company recently opened its new district office in the Permian Basin area. Now the TIW tools, sold in this area for over 65 years, will be sold and run by TIW trained personnel.

The new district office, located at IH 20 and County Road 1305, will house an inventory of TIW tools, plus sales, service and administrative personnel. The facility is on 1.3 acres and includes a 5,000 square foot warehouse and 1,000 square feet of office space.

In addition to bringing a large inventory of tools and service hands to run them, the new district office represents a connection to TIW's full corporate support group. Sales representatives have been trained to utilize the full engineering and production capabilities of the company in finding solutions to customer problems. TIW corporate personnel are ready to assist Permian Basin customers at any time.

TIW will be displaying a full range of its product line at the oil show, including liner equipment, PBR Completion Systems, production packers, and kelly and safety valves. Of interest to the Permian Basin area is the TIW PBR Completion System, which consists of the PBR (Packer Bore Receptacle), dual flow PBR, retrievable landing nipple, and insert seal assembly. This system offers unmatched pressure integrity and versatility in a packerless completion system. Being packerless, the PBR system can be provided to the full ID of the liner open for remedial activities.

Another TIW tool which will be displayed is the TIW type RRP Liner Assembly, which has been used to rotate liners an extended period of time after the hanger has been set and the setting tool released. This extended rotation during cementing significantly reduces the incidence of channeling and greatly improves the chances of a sound cementing job.

Texas Iron Works will be displaying in Booth A 13-14.

Petroleum museum wins diamonds

The American Automobile Association has re-designated the Permian Basin Petroleum Museum, Midland, as one of the nation's outstanding tourist attractions.

Under a new system adopted by AAA, the petroleum museum will be shown in association tour guides as a "diamond attraction." The diamond designation replaces a star system used heretofore.

Naming of the museum as one of the premier places to visit was done by a AAA field representative after visits to the site. The Midland institution has enjoyed star status in AAA guides for several years.

Drilling fund sales down

ANNAPOLIS, MD. — Sales of all SEC-registered oil and gas programs were down 34 percent during the first six months of 1982, but it still appears that overall sales for the year will be the second highest in the industry's history.

Annapolis-based Investment Search, Inc., which specializes in the analyses and evaluation of oil and gas programs, estimates total sales for 1982 at approximately $2.2 billion, based on sales to date as a direct variation from historical patterns. While this estimate indicates sales to be 24 percent less than 1981, the record year, such sales would still be the second highest in the 30-year history of the industry — 20 percent higher than 1980, the third highest year.

Investment Search president Arthur Jerrold King said "there's no question that the first half was depressing for many program sponsors, particularly those who sponsor drilling funds. I think some were expecting the momentum of 1981 to carry over. Others were prepared for a down market. Investors were simply frightened away by news of the oil 'glut', the subsequent drop in oil prices, and by the Wall Street myth that the change in income tax rates reduced the attractiveness of oil and gas investment.

"The truth is, the economics of petroleum investment haven't really changed," King said. "For those who are selective, this is the best time in the last five or six years to invest in an oil and gas fund."

There are reasons to believe that sales may take a turn for the better. "Most important is the fact that oil prices are strengthening," King said, noting that Investment Search has found a strong correlation between the price of oil and programs sales on an annual basis.

Complete power packages for both electric and mechanical drilling are available from Cummins Sales & Service Inc., with 21 branches in Texas, Oklahoma, Louisiana and Kansas.

Pictured are skid-mounted SCR drilling engines for a 30,000-foot rated rig.

Three Kendavis Industries companies will display latest products during oil show

Visitors to the Permian Basin Oil Show will see the latest in auxiliary generator sets, engines, preventive maintenance equipment, and rig lighting by three Kendavis Industries companies.

Cummins Sales & Service Inc. , Mid-Continent Supply Co., and Rig-A-Lite will be exhibiting some of the latest oilfield equipment introduced this spring at the offshore Technology Conference in Houston.

As an added attraction, the newest Cummins diesel engine on the market will be introduced to the oil patch by CS&S. Designated as the L10, the new engine is rated from 240-290 horsepower. In the oil patch the L10 in its various configurations will be used for medium duty trucks, reverse units, wireline applications, and small well service rigs.

The six cylinder L10 represents a major breakthrough in compact, lightweight, heavy duty engine design. Although the engine was designed to achieve a considerable reduction in both weight and size, it retains the durability and reliability for which Cummins diesels are famous.

The engine in the CS&S display will be the LTA-10-C, 290 HP at 2200 RPM. The LTA-10-C is turbocharged and aftercooled with 611 cubic inch displacement. The engine produces a peak torque of 840 pounds foot at 1400 RPM.

CS&S will also have on display other oilfield products such as a Cummins KTA-1150-G generator set, and Isuzu QD-145 diesel engine, a Perkins T6-154 diesel engine, a Cummins 855 power unit, and a Ford 300 (CID) GFV-6002-ER capable of running natural gas, LPG or gasoline power unit.

With branches in Odessa, Lubbock, and Amarillo, CS&S is in the heart of the Permian Basin oilfield activity. CS&S is the largest distributor of Cummins engines in the world, and the largest North American distributor of Perkins replacement parts. Headquartered in Arlington, Texas, Cummins Sales & Service has 21 full-service branches in four states and is one of the largest U. S. distributors of Ford industrial engines.

Mid-Continent Supply Co. will bring a traveling exhibit on preventive maintenance products recently added to the company's extensive oilfield inventory. The products extend engine life and consist of fuel and water treating products and filteration equipment which removes contamination from air, fuel, and lube oil. The exhibit will include a fuel filter and coalescer, a lube oil filter, a Turbo 11 air cleaner, NALPREP radiator cleaner and NALCOOL fuel conditioner.

MidContinent is also heavily involved in West Texas with supply stores in Abilene, Amarillo, and Snyder. The company has a division office in Midland. MidContinent is the world's largest independent oilfield supply company with more than 80 sales outlets.

Rig-A-Lite Company, Inc., of Houston, which designs and manufactures a range of heavy duty lighting systems and control centers for the petro/chemical industry, will bring an intriguing "audience participation" learning center to the Permian Basin show.

The learning center combines a computer programmed video terminal with an audiovisual presentation to respond to booth visitors' questions. A graphic display of a drilling rig brightly demonstrates locations where Rig-A-Lite products can be used such as drip-proof, marine-type stainless steel, explosion-proof fluorescent lights, incandescent floodlights and fixtures, mercury vapor floodlights anf fixtures, quartz floodlights, receptacles and related control centers.

From generator sets to lighting to general oilfield supplies and preventive mantenance equipment, Kendavis Industries is ready for this year's Permian Basin Show.

Oil production chemicals exhibited

The Oil Production chemicals division of Amoco Chemicals Corporation, a Permian Basin Oil Show exhibitor, is committed to the research and development, manufacturing, and marketing of a broad line of chemicals for the petroleum industry. In drilling mud additives through production, stimulation, and enchanced recovery chemicals, Amoco has the latest technology backed by an experienced sales and technical service force.

Amoco's leadership in production chemicals comes from its extensive line of corrosion and scale inhibitors and removers, demulsifiers, defoamers, biocides, paraffin inhibitors, flow improvers, and specialty chemicals as well as its staff of technical service representatives.

For effective protection against hydrogen sulfide and carbon dioxide induced corrosion and for demanding high-temperature and high-pressure conditions, Amoco has production chemicals with the variety and performance needed to achieve a high success rate in treating oil field production problems.

Also of special interest in the Permian Basin are Amoco's stimulation chemicals line which can increase production and profit when used in conjunction with various well stimulation methods. The A-Sol miscible solvent systems increase the effectiveness of acid treatments by exposing the acid-soluble matrix to attack; their original cost is often paid back in a matter of days through increased production and preservation of downhole equipment.

Amoco's manufacturing flexibility allows the use of a variety of feedstocks to prepare products suited to a wide range of applications. Multiple reaction and blending units permit products to be tailored to meet specific requirements. A multi-million dollar computer ordering system with worldwide warehouses and distribution points assures ready availability of any Amoco product.

Amoco's experienced local sales representatives are backed up by their Houston laboratory staff for quick customer service.

Lets move AHEAD!

Growth and progress...two very important gifts brought to Midland and the Permian Basin by a big industry...The Petroleum Industry. Ever since the first wildcatters came to this area, the Petroleum Industry has been making things happen for Midland. It is a privilege of Texas Oil & Gas Corp. to salute the men of this industry...and to join in making things happen. We like to feel that we are a big part of a big Industry.

Shotgun wedding joins petroleum and politics

By LANA CUNNINGHAM
Staff Writer

The marriage of the petroleum industry to politics has been a rough one. It brings to mind the image of a shotgun wedding where one of the two parties had to be forced into the union.

Despite the bickering, scrapping and fistfights, though, it's not a marriage that will soon end in divorce, to the regret of the petroleum industry, according to Ed Thompson, executive vice president of the Permian Basin Petroleum Association.

The Windfall Profits Tax was one of the biggest punches aimed by Congress at the petroleum industry, which is still reeling from the blow.

Last year, the value of crude oil and natural gas production from the Permian Basin totaled $24.65 billion, Thompson said. Of that amount, a third went to taxes and royalty owners.

The Windfall Profits Tax took slightly more than $4 billion, severance taxes walked away with $1.5 billion and $3 billion went to royalty owners.

And as if that wasn't enough, Congress attempted a few more punches in the form of taxes in the session that just ended. But the petroleum industry mustered its forces and the blows were fended off, causing less damage than expected.

"THERE'S ALWAYS the threat hanging over the industry of a tax, which interferes with business," said Thompson.

The splicing together of government and business started about 40 years ago, during World War II "when it became more important to have domestic production," he said, tracing back to the root of today's problems. Congress began levying taxes bit by bit on the industry. "They've done everything possible to keep us from being energy independent. They keep nitpicking, adding on taxes and taking away," he said in blasting away at Congress.

This year was no exception as another tax hit the industry in the last days before Congress adjourned until after the November elections. While President Reagan was pushing the "Tax Reform" bill and the media was referring to the legislation as a "Tax Increase" bill, the Tax Equity and Fiscal Responsibility Act of 1982 imposed three more taxes on the petroleum industry:

-Expansion of the alternative minimum tax by combining it with the old minimum tax, adding new preference items and changing the computational procedure. This will probably mean an increase in tax for many of those who have paid minimum tax or alternative minimum tax in the past.

-Individuals will have an option under the new law concerning intangible drilling cost (IDC) deductions. Limited partners may elect to avoid alternative minimum tax on IDC by amortizing the deduction over a 10-year period. Individuals other than limited partners may also avoid alternative minimum tax by treating IDC as a capital item.

—Beginning in 1983, the depreciable tax basis of property is reduced by one-half of the amount of the investment tax credit taken on property. An election can be made to not reduce the basis of the property but to reduce the amount of investment tax credit claimed from 6 percent to 4 percent on three-year property and from 10 percent to 8 percent on other property.

THESE ADDITIONS were the only ones which were passed by Congress. However, there were attempts to set new taxes on the industry, he noted.

A coalition of northern and eastern states attempted to impose a 30 percent severance tax on the petroleum industry but it failed, according to Thompson. "None of the money would have come back to the Permian Basin. It would have gone to help out the states with deficits."

"Most of the problems we have are with politicians who lead the fight for additional taxes and also lead the fight for more spending."

— Ed Thompson

The problem lies with politicians, Thompson said, leveling a blow at the other half of the unwanted marriage. "Most of the problems we have are with politicians who lead the fight for additional taxes and also lead the fight for more spending. In 20 years that I've been working with the Petroleum Association, no legislator has come up with the idea to cut taxes on the petroleum industry."

However, he admitted that part of the bad image the petroleum industry has received in recent years is the industry's fault.

"We've done a poor job on public relations," he said. "The industry hasn't done the best job of promoting its own problems. They announced the largest profits in their history and the next day announced increases at the pump. No matter how you explain it, the consumer isn't going to buy it (the explanation). Even though costs have gone up at the refinery, the public won't believe it."

And so the Petroleum Association has had its job cut out in trying to better the industry's image while explaining business problems to Congress.

"We keep going to Washington to try and explain to those people there is a difference between an independent and a major. Once we (independents) drill a well, we've got to go drill another one. It's so easy to go jump on someone who will have a hard time fighting back," he said of Congress' attitude.

And when it comes to numbers of supporters in Congress, the oil-producing states fall into a minority. "Even though the oil business started in Pennsylvania, the East Coast is without production. And some other states have minimal production and they get most of their income elsewhere. The states that produce oil have smaller populations and fewer people in Congress.

"IF YOU LOOK at the overall picture, you'll see a number of older states have little or no energy production," Thompson continued. "The population is concentrated in the north and east and on the West Coast.

"The states that do produce oil start out in a bad position and it gets worse."

Some of the problems stem from the thinking of those citizens of non-producing states. They believe oil and gas are national products and should be furnished to them with no taxes.

"They feel this is a national, rather than a state product," said Thompson. "But they tax their products when they ship them out of state."

Help from the government has come from "both sides of the aisle," or rather from the House and Senate and also from both Democrats and Republicans, according to the petroleum spokesman.

And for that reason, numerous petroleum professionals have organized and banded together with other groups in recent years as the taxes mounted to support candidates sympathetic to the industry. It's there that signs of a strong marriage have appeared: Some candidates desperately need the financial backing of petroleum groups while the industry needs the pro-votes out of these politicians.

These groups "have to look at individual candidates. Just being a conservative doesn't make them supportive of the oil industry," Thompson said. "Help for the industry comes from both Democrats and Republicans, but probably more Republicans have been supportive."

Thompson said petroleum groups talk with candidates and check out their voting records on oil and other related issues. "We talk to people who have had contact with the candidates and we try to get in their districts or states and get an idea of what their outlook really is. We keep records on what these people do. When they come up for election, there's ample evidence on hand."

WHILE THE LOCAL petroleum association is a non-profit group and doesn't support candidates with money, Thompson said numerous Political Action Committees (PACs) have organized to financially support candidates of their choosing.

"In the last five years, PACs in the industry have had more impact than anything else because of their financial support. PACs pick conservative candidates — ones who espouse the same causes the PAC fights for."

Thompson reported he has heard remarks that if "we could get all Republicans" in government there wouldn't be any more problems with taxes for the industry. But that's not necessarily so, he said and pointed to the Tax Equity Act as an example.

"Oilmen thought when Ronald Reagan was elected their problems were over, and the association lost a lot of members after the (presidential) election. Now we have a membership drive" because the problems didn't end, he said. "Our problems now are greater because of people thinking they had been lessened."

Because of the seemingly endless problems arising out of the federal government, local petroleum associations have joined hands on a statewide and regional basis to ward off the blows. Pointing out the groups used to spend more time competing with each other for members and disagreeing, he said they suddenly realized "if we didn't start working together, there wouldn't be a limelight. We had to start working as a team."

Looking ahead, Thompson said the groups are expecting a fight from a Congress wanting to stick a Windfall Profits Tax on natural gas if that segment is ever deregulated. But the battle probably won't arise until the 1983 session.

The petroleum people were hoping to slide through the deregulation legislation in the special session to be held after the November elections. Instead, Congress may turn its attention to the problems of Social Security and keeping the government running, which it failed to handle before its adjournment, according to Thompson. "They've fiddled while Rome was singeing, if not burning," he ruminated.

"THE HOPE IS WE can get more conservatives in the House and Senate or at least hold our own," Thompson added.

To get their special problems across to that segment of Congress which can't seem to understand the industry, Thompson said the Petroleum Association is planning to bring legislative aides of congressmen and senators to the Permian Basin for a hands-on look at the business.

"We will emphasize the working activity of the oilfield to the best of our ability. We're targeting the northeast and midwest states," such as Illinois, Nebraska, Massachusetts, Rhode Island, Connecticut and New Jersey. "These are the states that give us the biggest trouble in Congress."

The future promises more stormy sessions between the two parties of this unwanted union. According to Thompson, he expects more taxes because the Windfall Profits Tax hasn't brought in the revenue that was expected. Production dropped due to the tax and the recession, and thus lowered the tax monies.

"So now they're looking for other ways to get the money they have built into the budget," he said.

"There won't be a letup in Congress. They'll talk spend, spend, spend and tax, tax, tax. There just ain't no free lunch. We have to keep our guard up. We can't relax."

OIL MEN SAY:

Instead of feeling Congress ought to phase in natural gas deregulation over a period of years, I believe they ought to decontrol it totally and immediately. A free market is in everybody's long term best interests.

— C.M. "Mike" Butler, chairman of the Federal Energy Regulatory Commission, speaking Sept. 10, 1982, to a group in Midland.

El Paso Co. answers all your questions

El Paso Products Company's booth will feature a look at the Permian Basin oil industry in a specially developed video presentation, "Everything You Always Wanted to Know About Oil and Gas."

The Products Company produced the program in conjunction with the Odessa Chamber of Commerce for distribution to the classroom and for club and organizations' meetings. The video will be on continual view during the Oil Show at the Company's booth on the main floor of the Coliseum.

In addition to the video, the booth features diagrams, photographs and illustrations depicting the Products Company's operations in various locations throughout the state and nation.

El Paso Products, a producer of petrochemicals, also coordinates marketing of natural gas liquids and administers an intrastate natural gas pipeline system.

The company was formed in 1956 to upgrade wet natural gas products — propane, butane and natural gasoline — into products more profitable on the open market.

Construction of the petrochemical complex in Odessa began that year and by 1957-58, Products had completed facilities to produce olefins and anhydrous ammonia. The Company also operates a plant in Corpus Christi.

In 1979, El Paso Products acquired from Dart Industries a majority interest in the divisions now named El Paso Polyolefins Company.

El Paso Polyolefins has plants in Odessa and Bayport and produces polyethylene and polypropylene resins from which are manufactured plastic toys, squeeze bottles, housewares, industrial packaging, food wrapping, electrical insulation, water pipes, coating for milk containers, multi-wall bags, wrapping and liner papers and a multitude of other articles.

Consolidated Thermoplastics, a subsidiary of Polyolefins, has plants in California, Wisconsin and Delaware which manufacture plastic film used in wrapping and packaging materials. The headquarters group of Polyolefins is located in Paramus, New Jersey, and includes a research center.

El Paso Hydrocarbons Company, a subsidiary formed in 1980, coordinates marketing of natural gas liquids and administers intrastate gas pipeline activities.

In addition, Hydrocarbons operates plants in central and west Texas where casing head gas from approximately 1,700 oil wells is purchased, gathered, treated and processed. The plants market natural gasoline, ethane, butane, propane, elemental sulphur and pipeline quality residue gas that are recovered in operation of the plants.

Which Rest Is Best?

Conventional Bed Or Watercloud?

Researchers Report Findings

WATERCLOUD

A 1977-78 Sleep Study conducted at the V.A. Hospital by Research Doctors from the University of San Diego School of Medicine, used a **Watercloud** bed, and proved that the Watercloud supported the body more evenly and thus more comfortably than a "high-quality" 720 coil, "orthopedically" firm mattress and box spring. (Full documentation available at our store.) In fact, half of the chronic back pain suffering patients in the study preferred the Watercloud over the "orthopedically" firm bed because the Watercloud provided relief to their backaches they could not obtain with the firm bed. Perhaps the other half would have chosen the Watercloud if the new "Waveless Water-Mattress" were available at the time of the study. Nevertheless, the statistics indicate that a vast segment of the population might **ONLY** find relief and complete satisfaction on the Watercloud bed. It is a well known fact that proper posture is essential to both bringing relief and preventing the development of serious back conditions. The Watercloud was found to be unsurpassed in total posture support of the back and torso. **In fact,** the Watercloud automatically aligned the vertebrae in a manner **NO OTHER BED IN THE STUDY COULD DUPLICATE!** One patient was so relieved of back pain suffering, he immediately purchased a Watercloud for himself, and told the store sales personnel he was in the Sleep Study, and the Watercloud bed "...**changed my Life!**" Perhaps you or someone you know needs the suppport and the patented Watercloud flotation bed correct posture alignment!

Take A "Therapy-Rest" Test Today!

It takes only **20-minutes** for the Watercloud's 9" "Full-Flotation" principle to bring therapy-like relief to most backaches and stress! A small committment of time to see if the concept will work for you, and if you could "get used to" the new **waveless** watermattress within. We've set aside one Watercloud bed in a draped-off and quiet area of our store just to make you feel totally at ease. After the test, our personnel will be able to answer any questions you might have. And ...**to answer your first question,** Watercloud has a bed for every bedroom budget. Queen prices start at just **$000.00. The quality of sleep is identical in all Watercloud beds, no matter which Watercloud you choose!**

Cecil Brannon, a senior analyst with El Paso Polyolefins Company in Odessa, pours tiny plastic pellets into an extruder. They will be melted to eventually form the continuous column of thin plastic film shown in the background. At this Odessa unit, the pellets will be tested for quality control before being shipped to customers in other parts of the nation.

Continental to show production equipment

Continental Emsco, an LTV Company, one of the largest fully-integrated manufacturers and suppliers of oil field equipment and services in the world, will be exhibiting in booth B-58, 59 and 60 at the Permian Basin Oil Show.

The production group will be the primary focus at the show with a wide range of products and services, including sucker rods, subsurface pumps and a variety of liquid transfer systems including the Vapor Recovery and lease Automatic Custody Traansfer Units.

The company will show its cast reinforced fiberglass piping systems for the chemical processing and pollution control industries manufactured by its Fibercast Company.

Also, as one of the country's largest oil country tubular goods distributors, Continental Emsco will have on hand drill pipe from Jones & Laughlin and other leading sources. Plus, its Tubular Services Company will offer threading and testing of tubular goods.

All of this and more top quality merchandise for day-tc-day operations of the oil patch can be supplied through one of its supply stores in the area.

Halliburton to emphasize equipment rentals

Special emphasis on equipment rentals for producers will highlight Halliburton Resource Management's exhibit at the Permian Basin Oil Show.

Specialists will be on hand at Booth F-29 to provide details on how HRM's rentals can assist in freeing drilling capital by conserving money normally committed to equipment purchases. HRM offers a complete line of production, compression, gas conditioning and gas sweetiening facilities for rent.

The rental concept allows rental fees to become pre-tax expense items. HRM provides complete applicaion, design and engineering services to help make sure all equipment is correctly sized for each individual application. And, the company offers to change out equipment as production rates increase or decrease, in order to keep rentals as low as possible and efficiency at the highest level.

See us at Booth No. F-29.

Oil Show president going strong after 30 years in Permian Basin

By LESLIE HAINES
Energy-Business Writer

E. G. "Eddie" Durrett first came to Odessa in 1952, to become the new drilling superintendent for Delta Drilling's West Texas Region. At the time, the company was operating just four wells in the vast area, which encompassed both the Texas and New Mexico sides of the Basin.

Four years later, he had risen in the ranks, after being appointed division manager, to become Delta's vice president. The same year, he was elected to the board of directors of the Permian Basin Oil Show.

Thirty years later, Durrett, Delta and the Oil Show are all going strong: Durrett finds himself the 1981-82 president of the show, which has become an industry institution and the 14th largest trade show in the nation. Delta Drilling has expanded its operations in the 30-year time span, and today has well over 250 wells in the West Texas—New Mexico region.

And, Durrett has become president of three companies: Viking Energy Corporation, in production; Durrett & Associates, petroleum consultants; and D & R Drilling Company.

He speaks often of his respect for the "captains of industry" perhaps without acknowledging that he is one himself, in the oil and gas industry.

SINCE 1956, Durrett has served on every committee and in every capacity with the Permian Basin Oil Show.

In addition, he has been honored by the Old Timers at the Oil Show as a Permian Basin Petroleum Pioneer, for having been in the business since before 1943. He was a roughneck with Loffland Brothers while working his way through Texas A & M. He graduated in 1940, the same year some enterprising West Texas oilmen started the Permian Basin Oil Show.

There has been a continuous effort to vertically upgrade the show. "We are currently out of space (after leasing the National Guard Armory adjacent to the site) and cannot expand there, so we are trying to improve in other ways," Durrett says. The major innovation this time around is that for the first two days of the show, only professionals directly engaged in the oil patch will be allowed on the grounds. It will be an excellent time for renewing friendships, making contacts and contracts, and scrutinizing new equipment and technology.

The public will be admitted to the show Friday and Saturday. "We feel a strong obligation to the people at the exhibition booths — they've asked for four closed days, but we also feel a strong obligation to the public."

The show is aimed, above all, at the working oilman who uses the tools and equipment displayed. "We are appealing to the personnel who buy 90 percent of all materials bought.

"This year, I think it'll be more sales oriented," Durrett says. "In the last two or three shows, exhibitors have exhibited more for PR (public relations) than for making sales, because they had all they could do to sell what had already been ordered."

THE OIL SHOW Board of Directors, a voluntary group of 150, sees a promising undercurrent this year for the show: There have been fewer cancellations by exhibitors that in any of the last 15 years.

The show has been sold out since the 1980 edition, and there are already 300 on the waiting list for 1984.

Public reservations of hotel and motel rooms have peaked to the point that the only rooms left are as far away as Lubbock and San Angelo.

"They've taken everything from Pecos to Colorado City, from Fort Stockton to Seminole," Durrett says. "From the inquiries we've had, and the indicated housing demand, and calls from other states, we are expecting a high attendance.

"I've got to believe from the pulse beat we have that this year could see the highest attendance ever."

The motivation for Durrett and the other 149 directors is one of love — they love to do it and they love to build something and see the fruits of their labors. The show itself has only two paid employees — the executive director, Jay Alvey, and show secretary Sandra Chesshir.

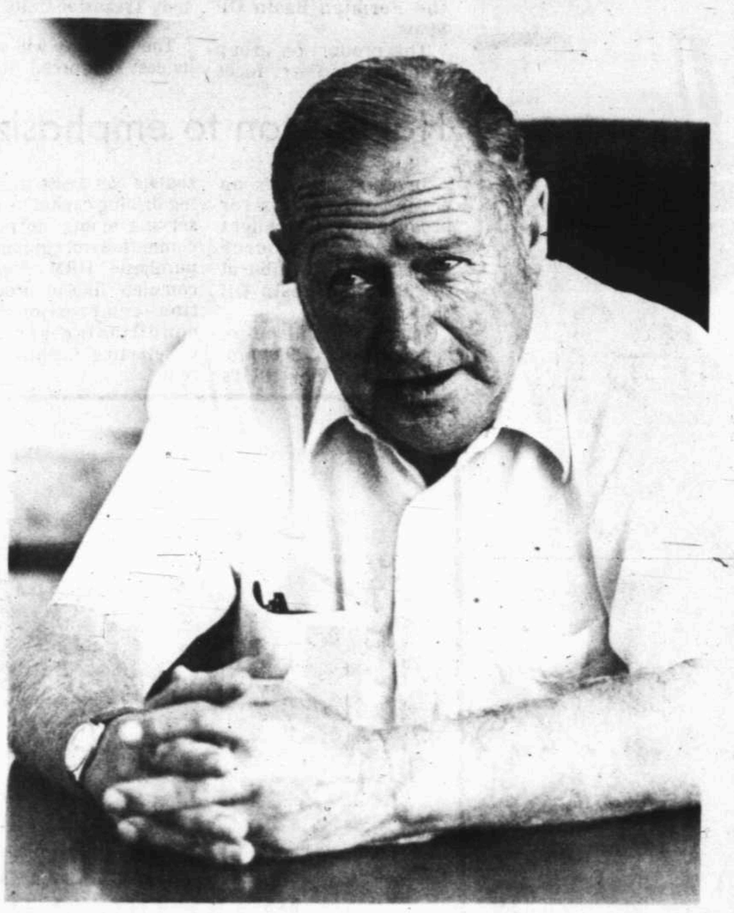

Photo by Cody Bell

E. G. "Eddie" Durrett

"I personally feel the oil industry has returned to a state of normalcy, as opposed to the boom of the last four years, but I am not at all convinced that normalcy is sufficient for national security needs."

— E.G. "Eddie" Durrett

PERHAPS ANOTHER thing behind Durrett's involvement is a need to prime the pump of the energy-finding business — promote it to the public, the media, and the industry itself.

"I personally feel the oil industry has returned to a state of normalcy, as opposed to the boom of the last four years," Durrett says, "but I'm not at all convinced that normalcy is sufficient for national security needs."

According to some industry experts, 50 percent of the world's known and proven oil reserves and 70 percent of the gas reserves will be depleted by 1991, Durrett adds, "so national security dictates a much higher level of activity to stave off the rate of depletion."

Durrett thinks gas decontrol is inevitable for national security reasons, and because removing price controls will, in the long term, reduce consumer prices.

Durrett's companies are active in Texas, New Mexico and Oklahoma, and to a lesser extent, in the Overthrust Belt in the Rockies. He decided not to get involved in the Austin Chalk play, "a decision which we haven't regretted."

Durrett says he and his team are pretty much oil-oriented, but they're still bullish on natural gas as well.

Sii Servco will be showing down hole instruments

Sii Servco, a division of Smith International, will be displaying its 1/14 inch and 1 inch single-shot and multi-shot instruments at the Permian Basin Oil Show. They are used to simultaneously determine the inclination (drift angle) and the magnetic direction of the bore hole.

The single-shot instruments record data on a photographic film disc, while the multi-shot instruments record data sequentially on a strip of photographic film. These instruments are highly reliable tools in controlled directional drilling and well surveyng applications.

Also displayed is the Servcoloc Clamp-On Stabilizer. It offers many advantages for both straight hole, course correction and long interval drilling, where proper stabilization is essential. It can be clamped directly onto the drill collar string, anywhere in the bottom-hole assembly (e.g., drill collars and downhole motors). This placement versatility reduces the overall number of connections, saves the operator time and lessens the risk of washouts, twist-offs and other connection failures.

Southwest Gloves displays safety gear

Southwest Gloves & Safety Equipment Inc., Fort Worth, has participated in the Permian Basin Oil Show since 1976. Both Corrine Bond, president, and Larry Lee, executive vice president-sales, hope all participants in this show will stop by our booth.

The company will display protective clothing and safety items that have been used and are being used in safety award programs — gloves, coveralls, hard hats, etc. — which are incentives for the ever increasing need for safety in all areas.

As a result of its years of experience and top quality product, Southwest Gloves isable to assure you proper protective items that will meet your requirements.

Our electric energy specialists know oil fields, too.

Walker-Neer's new Apache drilling machine to be shown

Walker-Neer's new Apache 25OH-40 can be seen at the Permian Basin Oil Show.The drilling machine can be controlled either from the deck of its substructure or from a fully enclosed, air-conditioned dog house that can be located up to 30 feet away from the drill string. No crew members need be near an Apache 25OH-40 to perform routine drilling or casing operations, or round trips.

All tubulars, including casing, are gravity fed between pipe racks and a hydraulically powered pipe boom. The remotely controlled pipe boom transfers all tubulars between pipe racks and drill string centerline. The top head drive serves as high speed spinner. Remotely controlled "Apache Breakout" wrenches make-up and break out tubulars at precisely controlled torques. Drawworks brakes are operated either manually from the drilling deck or from a remote dog house by redundant hydrostatic systems.

For 17 years, Walker-Neer Manufacturing Co. of Wichita Falls has been developing and broadening a series of drilling machines that is distinctly different from, much simpler to operate, and much faster than the conventional rotary drilling rigs and which, morever, represents a vast improvement in drilling crew safety. The key to the efficiency and safety of these machines centers around their top head drives and semi-automatic pipe handling means.

In 1964 Walker-Neer introduced the first series of these machines, the Con-Cor drilling machines. The Con-Cor series machines are intended primarily for minerals exploration and water well drilling. In 1975 the company undertook the development of the Apache series, which is an out-growth of the Con-Cor series.

Apache series machines are designed for heavy-duty, around-the-clock oil field drilling. They handle casing semi-automatically as well as drilling tubulars. They are operated by two- or three man crews in contrast to the normal crews of four, five or more on a conventional doubles or triples rig. The semi-automatic pipe handling equipment of Apaches eliminates all the heavy work in drilling, speeds the handling of drill pipe, drill collars and casing, and eliminates the need for a casing crew.

Round trip speed is generally comparable to that of a conventional doubles rig, and far fewer man hours and less crew training and coordination are required.

Two to four hour rig moves are standard with only about half the number of loads required to move conventional rigs having comparable depth capabilities. Cattle guard to cattle guard, Apaches typically drill and case a well in 20-25 precent less time than conventional rigs on the same lease and have fewer hole problems doing it.

Hole problems are minimized because the bit need never come off the bottom of the hole when a joint of drill pipe is added, and it takes less time to add it.

Apaches represent a vast improvement in drilling rig safety. Those components on conventional drilling rigs which account for some 90 percent of the accidents that result in injuries to crew are entirely eliminated on Apaches.

Both racking board and derrickman are eliminated. All tubulars are transferred directly from horizontal pipe racks to the drill sting by remote control. There are no free swinging traveling blocks, tongs, counterweights, swivel nor kelly, and the rathole, mouse hole, rotary table, spinning chains, rotary drive chains and even the drilling deck per se are eliminated.

The newest of the Apache series is the Model 250H-40. Like all Apache drilling machines, the Model 25OH-40 has a mast and hydraulic pipe handling boom equipped to handle Range 3 tubulars in lengths up to 46 feet and in diameters ranging from 3 1/2 inches through surface casing O.D. up to 9 5/8 inch, and includes all necessary options and ancillary equipment to meet the diverse requirements of all country drilling. Unlike all its predecessors, Con-Cor and Apache drilling machines, the Model 250H-40 is equipped with a high subtructure and offers optional control facilities for remote controlled operation.

Apache 250H-40 is available mounted on a self-propelled five axle carier or on a three axle semi-trailer, or skidded for use on drilling barges, ships, or offshore platforms. The substructure, which provides at least 10 feet clearance under slips, forms an integral part of the machine, as does the drawworks, slips, top head drive, fuel tanks, light plant and semi-trailer or carrier. Only the pipe handling boom and a 10 inch high ramp are moved separately.

With approximately 130 psi of air pressure on the clutch, the Apache 25OH-40 will hoist at least 180,000 lbs. When equipped with 4-1/2 in. 16.6 lb./ft. or 5 in. 19.5 lb./ft. Range 3 oil country drill pipe and 30-40,000 pounds of collars, highly efficient oil and gas well drilling is practical to depths of around 7,000 feet.

When equipped with a mixed string consisting of aluminum and steel pipe, the top head drive provides torque adequate for drilling to around 8,000 ft. Like all Apaches, the Model 250H-40 is compatible with the use of air, foam, or mud drilling fluids.

All controls, including those for engine, drawworks clutch and brake, pipe boom, air slips, Apache Breakout (a hydraulic make-up - break out device), mud pump, top head drive, etc., can be mounted on a lightweight console connected to the drilling machine by a 30 foot umbilical cord.

The console is easily transportable by two men and can be mounted either on the deck of the substructure outside the derrick, or in a special dog house which incorporates large windows and which can be hydraulically raised to an elevation at — or slightly above — the drilling deck so as to provide the driller with an overview of pipe racks, Apache, mud pumps, mud tanks and other ancillary equipment. So equipped, crew members need to be near or on the Apache 250H-40 only to service it.

"To the best of our knowledge, both our Con-Cor and Apache series drilling machines are unique in the industry. Some 200 of them are at work today, all around the world," said a spokesman for Walker-Neer.

The 1982 Permian Basin Oil Show marks the third time that Rush Welding and Supply Inc. out of Levelland, Texas, will exhibit its services. Shown here is one of the company's hot oiler trucks.

Rush Welding to show Rush-About

Rush Welding and Supply, Inc. located in Levelland, Texas, is recognized throughout the petroleum industry as a leader in the manufacturing of specialized oil field equipment. Rush Welding & Supply, Inc. was started in 1975 in a leased building and has grown to include a large shop area and paint buildings which occupy a city block. During March 1981 Rush Fabrication moved into a new 13,000 square foot building east of Levelland and has the capability to fabricate practically all types of steel products.

The 1982 Permian Basin Show will mark the third consecutive show in which Rush Welding and Supply has participated and exhibited the Rush-About Hot Oil Unit.

They're against anything oil is for

From Our Washington Bureau

By WILLIAM GARLAND

WASHINGTON — The Energy Action Project and the Citizen-Labor Energy Coalition seem to hold a consistent position on oil and gas issues: Anything industry supports is detrimental to consumers.

The groups have published many analyses, usually negative (if not hostile) to the industry, and industry spokesmen have countered with complaints that the reports are used by the media without proper examination or opportunity for rebuttal.

The two frequently quoted consumer groups already are sharpening their sabers in expectation of next years' fights over energy taxation and natural gas controls.

Ed Rothschild, who heads Energy Action and also represents the affiliated coalition, said the groups' first priority next year will be natural gas.

"Natural gas is going to continue as the biggest issue in terms of the price, contractual arrangements and controls," said the 35-year-old project coordinator who works out of a Washington office cluttered with material on the petroleum industry.

Accelerated decontrol of new natural gas, as well as decontrol of old gas prices, is expected to be a hot topic in Congress next year.

But Rothschild said the efforts of Energy Action and other organizations probably will thwart decontrol, in part because of rising residential gas prices.

"I don't think there's going to be much on decontrol," he said. "I don't think it's in the cards."

He said the natural gas industry, from producers to pipelines and utilities, has not formed a common front on decontrol. And elections next month will weaken conservatives in Congress, he predicted.

"If the Democrats get 25 to 30 seats in the House, as expected, I think the mandate is going to go the other way (toward continued controls)," he said.

He cited several races in gas-consuming states such as Missouri and Pennsylvania where Democratic candidates are campaigning in part on a pledge to support keeping price controls as they exist under the current Natural Gas Policy Act of 1978.

Rep. Phil Gramm, D-College Station, has been a leader in the attempt to form an industry consensus for gradual, but complete, decontrol of natural gas prices.

"He's been trying to get the producers and distributors together and he keeps saying he's close to an agreement," Rothschild said. "I think that's a lot of poppycock. I think he's saying that to keep his constituents happy."

But Energy Action and the coalition will side with the industry on one issue: They will not support a windfall profits tax if natural gas is decontrolled. Rothschild said that a windfall tax would ease the passage of decontrol and that such a tax probably would go into general federal revenues without helping low-income people with fuel bills.

But the coaltion will oppose the industry on other issues. Rothschild would like industry tax breaks, such as the tax deduction for intangible drilling costs, dropped. Members of the industry currently can subtract costs of items related to oil and gas drilling that are not permanent, such as mud compounds used in drilling.

Overall, Rothschild said the conservative tide in the country is shifting, and that will mean a better environment for achieving the goals of his organization.

"This administration has now clearly shown its colors," he said. "It's pro-big-business, anti-farmer and anti-consumer."

CO·EXX

PIPE COMPANY

"TOMMORROW'S PIPE TODAY"

How Can You Reduce Pipe Costs

While Solving Problems?

- Co-Exx new three layer pipe increases burst strength and provides a method for other improvements.
- Co-Exx pipe is uneffected by most corrosive liquids and gases.
- Co-Exx pipe lowers cost when considering alternate piping systems.
- Co-Exx pipe can be installed on surface or subsurface.
- Co-Exx pipe operating pressures are 166 psi (rated in water at 73° SDR-11).
- Co-Exx pipe rapid burst strength 600 psi (rated in water at 73° SDR-11).
- Co-Exx pipe is produced and inventoried in the Permian Basin.
- Co-Exx pipe is uneffected by soil conditions.
- Using the Co-Exx new system, various materials may be extruded on the internal or external layers to help solve your paraffin problem. The new technology makes solving the problems less expensive.

Men said it couldn't be done; She did it anyway and loves it

By LESLIE HAINES
Energy-Business Writer

Dolores "Dee" Wallin was upset when some men told her it couldn't be done — "it" being the chance to work on a seismic line or party crew.

Wallin not only began the work several years ago, but advanced in the profession. She is now head line person and a truck driver for a Geophysical Service Inc. crew. She has been with GSI over two years.

"I wouldn't do anything else," she declares as her truck slowly inches along the dusty line next to cotton field in Howard County. From her seat, she watches the crew lay down seismic cables with geophones (sound wave sensors) attached. The cables stretch for two miles ahead of and behind the recording truck, which is full of sensitive computerized instruments manned by Travis Williams.

In a typical day, if the terrain isn't too wild, the crew can cover six miles. It takes them five or six hours just to lay out all the cable involved.

Pat McCord, the party manager, says his is a traveling crew that doesn't mind picking up and moving to another location, in Texas or another state, wherever GSI needs it.

Dee, herself, appreciates the freedom and variety of her work.

"I feel kind of free — I'm outdoors all the time, not cooped up in some office," she says. "I'm the one who has to push all these guys out here. I can do what I want. The other thing is, I can make good money out here."

What she wants is for the crew, made up of men and women, to repeat its award-winning safety and productivity performance of 1981, and for the crew to keep working in spite of a general slowdown in seismic exploration work around Texas.

At first, the petite woman thought she wouldn't like seismic work, as she used to be an indoors type of person. When her husband, a surveyor, started working on the job, she stayed behind in lonely hotel rooms to babysit for the children of other women who were working on the crew, but she soon grew bored with that, and asked the party manager if he would give her a try.

He did. Before signing up with GSI, she worked for Gulf Oil and two other major seismic companies.

Wallin started by hustling jugs (picking up and laying down the geophones which are attached to the seismic cables.)

"It was very tiring at first," she remembers. "It keeps you in shape, is what it does," she adds with a laugh. She says it took her about a week of hustling before she felt her muscles were in shape for the job. She went from 140 pounds to about 110.

The men on the crew at the time doubted whether she'd be able to last on the job, but she has lasted, and become the head line person. "All it takes is will power to do it. It's a woman's ego — just to prove to a man I could do it.

"Then, I was teasing them because I was outdoing them — laying down and picking up faster than they could. They tease me back, though, saying things like 'You should be home, taking care of babies.'"

Today, she and the male members of her GSI crew get along well. They respect each other, help one another, banter back and forth, and share their personal problems, much like members of a family would, as they pick up and lay down along the seismic trail.

"Sometimes, they look at me, a 24-year-old, like I was their mother," she says. "We're real close out here. We watch out for each other. I just about know their life stories.

"I wouldn't trade them for any other jug crew," she says, as she hands one of the men his lunch sack from the seat of the truck.

She supervises 14 people, four of whom are women.

Dee's husband is a surveyor for GSI. (All the women on the crew are married to other GSI crew members). He can usually be found a few days ahead of the seismic crew, preparing the way.

Each night the couple reunites at the motel room in whatever town they are staying at the time. Recently, they bought a big travel trailer, which makes them feel more like they have a home.

Their normal schedule is five days on, two days off, unless special circumstances intervene. The crew was most recently working in Deming, New Mexico, and before that, for a year and a half, had been in many other locations in New Mexico. It averages three months on a location, and lives motel to motel.

"Usually in every camp ground, there is a place for us. Having a travel trailer makes us feel at home — it takes a lot of stress off you."

That stress is somewhat relieved by the friendships that form on the crew. Says Dee, "I've got one guy out here who is 62. maybe 63 years old, and he's still picking up. He's been doing it for 13 or 14 years. I call him 'old man Harvey.' I hope when I get to be his age, I can still go at it like he is."

DST answers in minutes, not days.

Introducing SPRO™ from Johnston-Macco

Now you can have more accurate answers during drill stem testing with Johnston's SPRO (Surface Pressure Read Out).

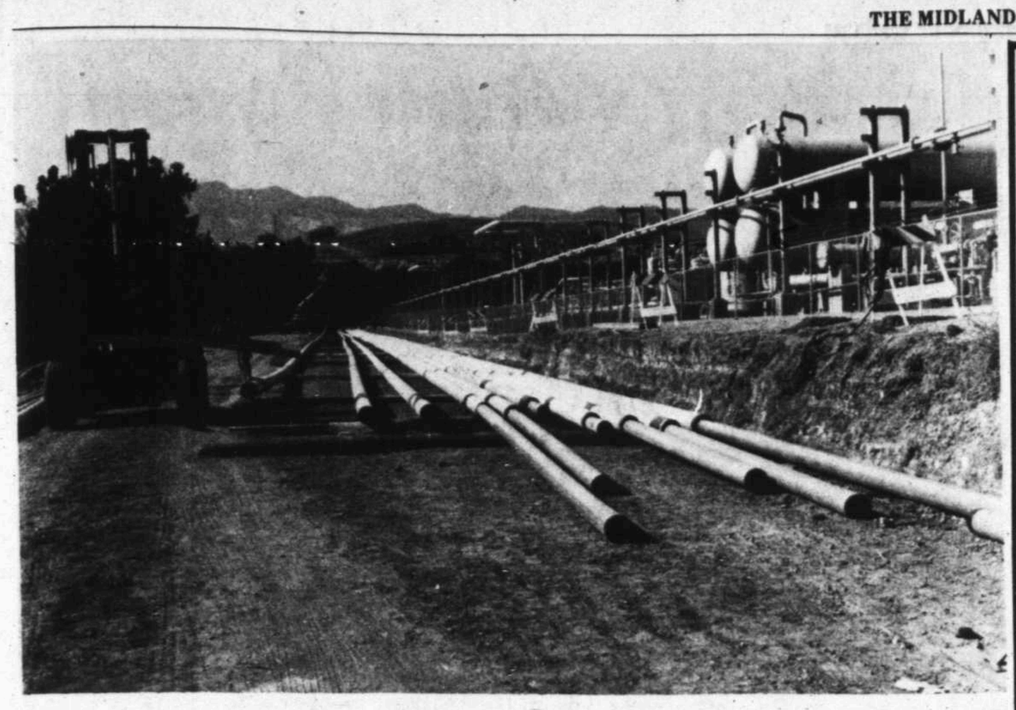
Johnston has combined two DST innovations: closed-chamber testing (Teleflow) and real-time bottomhole pressure analysis (SPRO). Both systems are designed to operate independently. But together, they provide better and faster data on formation fluid tpe, flow, and reservoir parameters.

With SPRO, there's no waiting for results. Downhole measurements are relayed by wireline to an on-site computer, giving accurate and immediate information on flow and shut-in times.

And SPRO gives you total test contro. Unlike conventional drill stem tests, SPRO allows continuous monitoring of reservior parameters and downhole equipment.

For more information on how the combination of Teleflow and SPRO can give you better reservior answers contact your local Johnston representative.

JOHNSTON-MACCO
Schlumberger



Unisert Systems manufacturcs a plastic-lined steel system applicable to cross-country pipelines. This type of system was used on the West Texas Water Supply Line in Odessa. Shown here is 6 inch fiberglass pipe inserted into 8 inch steel pipe.

Plastic lined pipe line arrangement to be shown by Unisert Systems

Unisert Systems manufactures a plastic-lined steel system applicable to cross county pipelines. Its main product consists of an inner plastic pipe, and outer steel pipe and cement grout within the annular space to tie the two together. The company has been a Texas firm since 1977 when the head office was consolidated in The Woodlands. Unisert Systems has conducted business in this vein, however, since 1968.

The plastic pipe is slid into existing pipelines and grouted in place to enact a structural repair as was done on the West Texas Water Supply line in Odessa.

New pipeline systems are installed primarily for handling corrosive fluids at higher pressures within the oil patch. A recent development has been where joints of plastic-lined pipe can be corrected with the standard steel butt-weld configuration. This innovation has allowed the expansion of plastic-lined steel into the offshore market.

The plastic pipe material can range from fiberglass reinforced plastic to P.V.C., polyethylene and polybutylene. The exhibit will feature pictures and slides of past projects, informational brochures, cross sections of the product and samples of the newer connection.

Unisert's IT3 System combines the advantages of metallic pipe with those of plastic pipe. Our market share stems from those areas for which plastic pipe is suited but cannot handle by it itself due to pressure and mechanical constraints.

Lower crude oil prices predicted

BY DORY DEVLIN
Hearst Washington Bureau

WASHINGTON — World crude oil prices will fall from $34 a barrel in 1981 to $32 in 1982 and remain there through 1984, the Energy Department has projected.

In its 1981 Annual Report to Congress, the Energy Department also estimates that world crude oil prices will rise to $33 per barrel in 1985, and shoot up to $49 in 1990 and $67 in 1995.

The report notes that world oil prices have been falling since early 1981, "reflecting a persistent surplus of oil on the world market and an accompanying selloff of inventories."

"Total sales of oil have exceeded world demand during the past year causing strong downward pressure on oil prices," the report says.

In March 1982, OPEC responded to the "soft market situation" by imposing its first official oil production ceiling, 17.5 million barrels a day, the report adds.

The report also says that steady or decreasing oil prices will eventually stimulate demand for oil while discouraging conservation and efforts to develop alternative energy sources.

High and increasing world oil prices, which are expected to occur after 1985, are assumed to have the reverse effect, the report concludes.

STATUS SYMBOLS OF GOLD

Resurgence of "dressing up" and French cuff are putting cufflinks on fashion-conscious men. Since its invention in the 13th century by Louis IX of France, the cufflink has been considered an index of social rank, a symbol of status. Myriad modern-day cufflinks are offered with rigid or chain links such as the dimensional and bamboo designs (top), open-worked basketweave design, rectangular and sculptural desings (center), all in 14K gold. Below, the 22K scarab cufflinks are authentic replicas of an ancient Egyptian symbol. "Button covers" of 14K gold (bottom right) snap right over a shirt cuff button--the gilded alternative for dressing-up barrel cuff shirts. In the center, a set of 14K gold blazer buttons, reminiscent of the 1820's when stylish men of distinction wore dozens of gold buttons on their most elegant garments.

Still Confident. Still First.

We've been investing in the Permian Basin's oil economy for more than 50 years.
Not once has our confidence wavered.
From the start we've been the first to see a workable deal and the first to back it with every resource at our command.
Our resources have never been stronger.
Our optimism is still as strong as our ability.
We're still confident.
We're still First.

R&R showing electrical items

More than ever before the oil and electronic industries have combined in order to meet the ever growing energy needs of our country. R & R Electronic Supply Company is proud to be a part of such a dynamic and innovative industry, and is pleased to show its support for it by being a participant in the 1982 Permian Basin Oil Show, honoring the oil industry.

R & R's exhibit at the Oil Show highlights some of the electronic products being used by people in the oil business. The exhibit will feature some of the many lines and products available from our company. On hand at the exhibit will be personnel from R & R to talk with people about the electronic supply business, and oil, the industry that means so much to all of us.

In 1936 when R & R Electronic Supply was founded, electronics meant radios. That, of course, has changed dramatically and so has R & R. The business, like so many others, works in conjunction with and depends on oil, and is dedicated to serving the oil industry.

Company officials feel that "electronically speaking, we speak oil."

R & R welcomes all oil personnel to the 1982 Permian Basin Oil Show, and invites you to come by the exhibit to see how electronics and the oil industry work together.

OIL FACTS

1980 set a record for deep drilling in the United States as 743 wells went to 15,000 feet or deeper, says Petroleum Information Corp. The record was broken again in 1981 with 999 wells.

EXECUTIVE OFFICE
Memo:

TO: All Staff
FROM: W. J. Ogilvy

Please advise how much time you spend on your department's travel arrangements.

- Sue Roberts - 4 hours weekly for airline, hotel and car rentals.
- C.B. 6 hrs. for hotel/air
- Denise Hammer... 11 hours weekly with airlines, hotels and cars for engineers
- Frank - about 5-6 hours per week on service group
- Betsy R. - 7 hrs. weekly, 30 hours monthly for the Sales department.

Well that's too much!!! Time is money

Instead of 3 or more calls to airlines, hotels, car rentals, etc., why not make just 1 to TRAVEL TIME? Then everybody's time can be spent more productively.

Remember, our professional services are absolutely FREE at . . .

Trailer-mounted well testing unit featured

Otis Engineering Corporation, a Halliburton Company, will be featuring the trailer-mounted Compac Well Testing package in its outside booths, OS-8 and OS-36 at the Permian Basin Oil Show. This equipment, developed for production well testing on inland wells, contains heater, separator and pump with unitized piping on a skid or trailer mounted to form compact, portable units.

The concept behind Otis' ComPac design is to use space and materials more efficiently as well as to utilize and maintain component and pipe alignment on single base designs. This design makes obsolete traditional-separate pieces with individual piping networks.

Featured in the inside booths, J-69 and J-70, will be Otis' line of production packers, mechanical and hydraulic-set liner hangers, subsurface safety valves, artificial lift equipment, locks, nipples and a working model of a complete safety system with surface equipment.

Congratulations to the 1982 OIL SHOW from Santa Fe Energy Company ...Dedicated to the Energy Community!

Santa Fe Energy is well-respected throughout the industry as one of the nation's largest independent petroleum producers. But did you realize that Santa Fe was also one of the first U.S. oil producing companies?

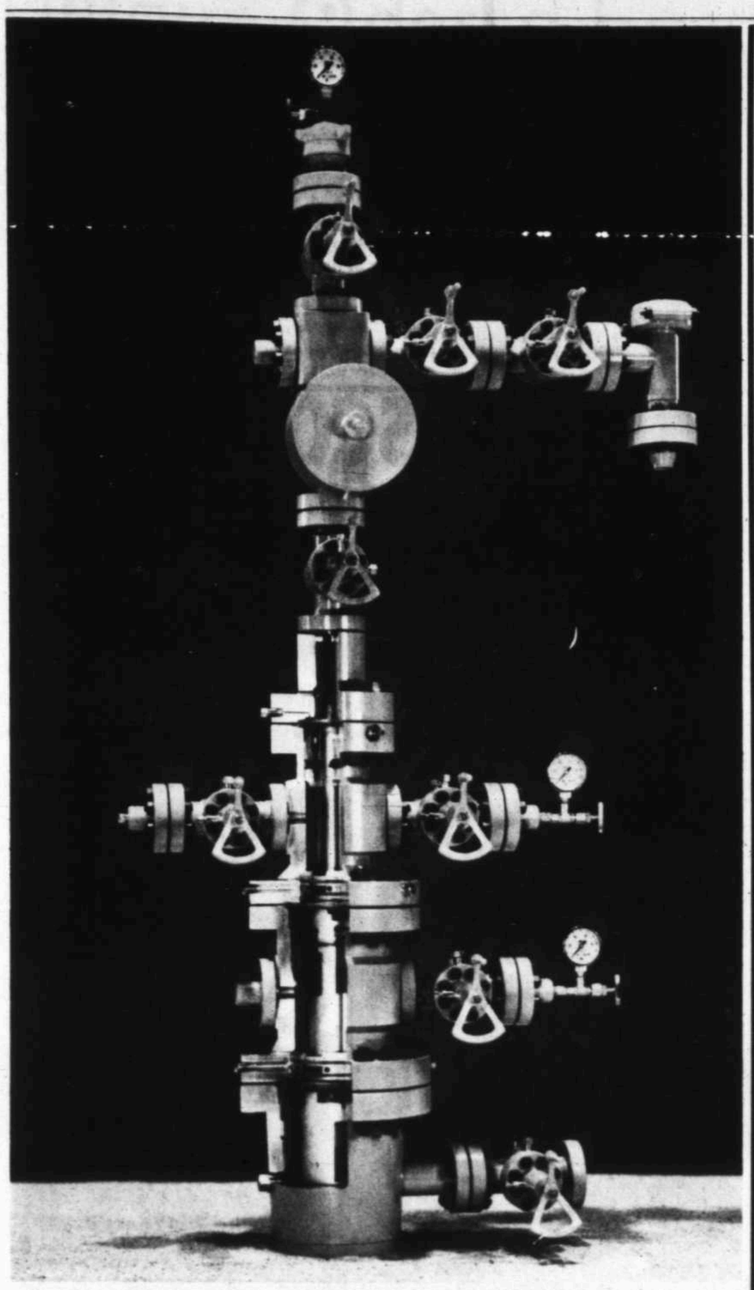
The foresight and determination that marked our beginning in 1896 carries through our corporate strategy today. As our CEO states: "We're managing our operations for steady growth over the long run."

In addition to 137 million barrels of proved oil reserves in both offshore and onshore tracts, we are aggressively developing natural gas resources as well.

From our Houston headquarters and throughout our 19-state exploration and production network, we capitalize on the unlimited potential of our financially secure, diversified corporate base.

An Equal Opportunity Employer M/F

Santa Fe Energy Company
A Santa Fe Industries Company
Houston, Texas



Ever see the inside of a Christmas tree? W-K-M will be displaying this one-third scale cutaway wellhead model in its exhibit at the Oil Show.

W-K-M to show line of Christmas tree valves

W-K-M will emphasize "The All-W-K-M Wellhead Assembly" in its exhibit at the 1982 Permian Basin Oil Show. Best known for its dependable Pow-R-Seal gate valve, W-K-M manufactures a complete line of wellhead and Christmas tree components.

Precision engineered valves, wellhead components and surface safety system equipment comprise a complete package which has earned a reputation for reliability under the most severe service conditions. In addition to dual completion and CO-2 wellhead assemblies, W-K-M will display a 1/3-scale model wellhead and tree with a 25 percent cutaway section from the casing head to the hanger spool. Other products that will be exhibited include: DynaSeal 310 ball valves; DynaSeal 360 and 370 ball valves with a 370 top-entry asembly/disassembly demonstration; Pow-R-Seal gate valves; Saf-T-Seal gate valves; DynaCentric high performance butterfly valves; DynaSeal pneumatic and electric actuators; and Safety system domonstration unit.

Midland College teaches oil and gas business

By HALLYE JORDAN
Staff Writer

According to Dr. Don Hunt, vice president of instruction at Midland College, the oil industry has saturated studies on campus.

And, for that matter, the petroleum business has pretty much penetrated all of the Permian Basin's higher educational opportunities.

"It seems like the oil industry permeates our entire curriculum," said Hunt.

Looking at the course schedule for the 1982-83 academic year, as well as those from the past, one can only agree. From the first oil-related course, Oil and Gas Law, offered in the business department, to the various offshoots that were developed through community requests, petroleum industry courses can be found in almost any degree program or area.

"In meeting the needs of the community, the first thing we've got to do is meet the oil-related needs," he explained.

WHILE MANAGEMENT and geology courses were offered in classes at the college's start, others have been developed due to the growing demand of oil companies, he said.

"In the occupational-technical area, if we have requests for certain courses, we make a survey and find out if there is a need," Hunt said. "We have an advisory board that does the survey. We have advisory committees in every area (that is petroleum-related)."

Besides the expected courses, such as petroleum engineering, machine shop, geology, welding, accounting, math, physics and chemistry, all of which can be applied to the oil industry, whether directly or indirectly, seminars and short courses through the continuing education services also are offered.

"Many oil companies even send their employees out here to take defensive driving," Hunt said. "And we've got other short courses such as petroleum fundamentals, principles of petroleum geology and petroleum land courses."

Even English students can sample the oil industry through a technical writing course.

"You know, things have changed dramatically. In the past, major universities wouldn't accept credits from welding or machine shop. Now it's two-plus-two, take the first two years in the junior college and they'll let you take the last two in a major university to get a degree.

"EVERY YEAR, Midland College becomes more acceptable for students," he continued. "We don't have a football team and we don't have sororities or fraternities. But many people are going for professional degrees. And they can save a lot of money by doing it right here.

"Students now are realizing that they have to have some sort of good education to get a good job. The more education they have, the more opportunities they have. Before, anybody could get any type of job," Hunt said. "Our science has grown as much as anything else, like in biology, chemistry, physics, while a lot of our smaller colleges have not. Maybe that's just Midland; Midland is a well-educated city and the opportunities are the reason they come back on that part."

Another growing field at MC is the computer science department, Hunt said. "Computer science is a direct offshoot of the oil and gas industry," he pointed out. "And our whole math department has increased as much as any department. Math is a basis for practically any of these courses."

Midland College offers petroleum-related courses in several different plans. While many students, fresh from high school, enter with a two-year associate degree aim — planning to go on and obtain a bachelor degree at a major college or university — some students enter through the occupational-technical program to receive training for the job market they plan to enter directly.

STILL OTHERS, just wanting to update their skills, enroll in the general education program. Through the community services division, courses are offered and students who complete them receive credit such as CEUs (Continuing Education Units).

And, according to Hunt, there are many students who fall in this category.

"We've had people that have had master's degrees and they've come back and trained in another field. They may have a master's degree in one thing and then their employment changes and they come in."

Images of the older student, one who is re-training or updating skills, are seen in higher educational classrooms throughout the Permian Basin, according to directors of other facilities in Midland and Odessa.

"Our average-aged student is 27 years old," said Gary Boyd, director of the petroleum education center at Odessa College. "We have a few short courses, but most of them are the two-year plan."

According to Boyd, there are almost 350 students enrolled in petroleum-related courses at OC. Seventy-two percent of those students already are employed in the petroleum industry. Of those students, about 11 percent have bachelor's degrees and a little over 1 percent have worked on or hold a master's degree. Around 15 percent of the students are women and about 11 percent are "career changers," he said.

"A LOT OF OUR students are coming back for brush-ups and many are simply improving the position they have in a company," he said, citing the example of an older student with a chemical engineering degree who enrolled in petroleum overview simply "in order to keep on top of everything."

While OC offers classes in the day, about 63 students presently are enrolled in the night program, he said, adding that the college is planning a program in which a student may receive a degree solely through night studies.

At the University of Texas of the Permian Basin, the petroleum industry has brought about a few changes in course curriculum and titles, according to Dr. Robert Reeves, dean of science and engineering.

Last month, the bachelor of earth science degree was renamed the bachelor of geology degree "in order to more accurately reflect what the students were studying," he said.

And, unofficially, the go-ahead has been given to offer a master's degree in geology, Reeves said, adding the degree program should be offered by September 1983.

"WE'RE VERY EXCITED," he said. "Most of our students were working in geology last year. We graduated close to 40 in 1982. And about two-thirds or three-fourths of those students already had degrees and had come back to get a second degree in geology.

"We've got some new students, and some that are switching fields. But students in practically every grade go into one petroleum field or another."

According to Reeves, students who had degrees in forestry, biology and even fine arts returned to the classroom to receive another degree. "We've got a wide variety of degrees that come into petroleum engineering to get a degree closer to the petroleum industry."

Many chemistry graduates go into careers in refineries, he explained. And while many seek employment in other fields, he estimated about three-fourths "go into petroleum in some way or another."

Ditto chemistry majors, he said. While some enter medicine school, "usually those graduates go into the petroleum business."

Ditto computer science majors, he continued. "They also go into petroleum one way or another. Either they go into the business end or into seismic data processing.

"Exploration geology and geophysics depend quite a bit more on computers than they did a while back," he explained. "They're hiring lots of computer science majors to go into exploration departments."

Although these three schools offer two-year degrees in addition to the continuing education short courses, two Permian Basin facilities offer instruction solely for the purpose of training or re-training of mostly company personnel.

IN ODESSA, at the Petroleum Extension Service of the University of Texas at Austin, and in Midland, at the Permian Basin Graduate Center, short courses are offered for these purposes.

And while the two facilities share the older student in a short course concept, they also have another common bond: a growing national and international recognition.

"I'd say probably about 75 to 80 percent of our students are from other parts of the country — not just Odessa," said Paul Hudson, coordinator of the Petroleum Extension Service at Odessa College. "We've got some Australians right now, and some Japanese. We train people from all over the world."

Hudson pointed out that about 98 percent of the students are sponsored by their employers. Companies not only pay employees' tuition, but, in most cases, lodging and travel expenses.

"Instructors come from all over, too, although the biggest part are from Texas," he said, adding that since the instructors are strictly industrial people, all of the courses are non-credit.

"We work with different trade associations in putting on schools for field-level people who are already involved in the petroleum industry."

Between September 1981 and August 1982, 782 students enrolled in the 10 different schools scheduled several times during the year.

In Midland, the Permian Basin Gradute Center was established with the original intent of offering graduate courses, Patricia Beck, president of the board of directors, explained.

"The name really scares some people off," she admitted, "although, now you don't even need a high school diploma to enroll in courses. Really it was started for graduate courses and for people with degrees but over the years, especially when UTPB took over with credit courses, it changed. All of our courses are non-credit."

"WE'VE GOT STUDENTS that have anywhere from a doctorate to a bachelor's degree," Lola Igou, executive director, agreed.

The center, which offers not only technical courses, but also management, land and introductory curriculum, has about 150 courses a year. Sixty-two are scheduled this fall.

While early registration was off about 10 percent from last year, Ms. Beck said, "it's not so much in the technical areas, but more in oil management."

The two predict enrollment and course offerings to continue growing and expanding, but perhaps at a slower rate than they have since the center was chartered August 4, 1967, and the office was opened in 1968.

"Just before that (the opening), we had a depression in the oil industry," Ms. Beck explained. "A lot of people were losing jobs and there was no way for professionals to keep up. All of the technical societies sponsored us so that these professionals would have some sort of helpful training."

Courses changed from credit to non-credit in 1976, although the center kept it's master's program in geology.

According to Ms. Igou, instuctors are brought in from all over the United States and, occasionally, from foreign countries.

"We have a very high course-offering level here," she explained. "We are community sponsored and community supported, however, we have yet to take in one tax dollar."

And while some students hail from Michigan, the East Coast, Singapore, Egypt and Norway, many are returned Midlanders, Ms. Beck noted.

"There were so many years where every kid in Midland got out of town so fast," she said with a laugh. "Now, we're seeing these sons returning."

A LITTLE HISTORY
1927

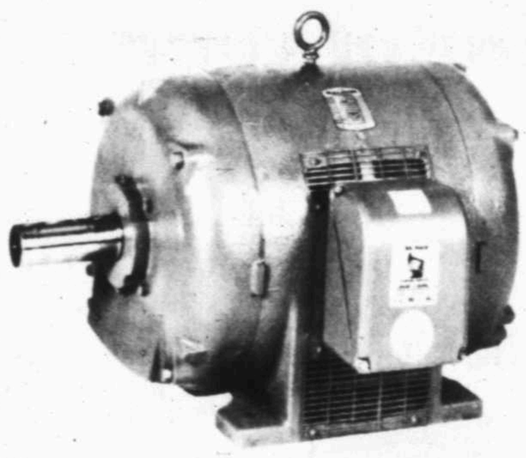
The first drill stem test is conducted, in the East Field, El Dorado, Arkansas, by Johnston Testers.

Marathon Oil Company (then Ohio) pioneers the use of elcetric power for pipeline pump stations at Coulter, Ohio. The following year, it builds a trunk line from Iraan to Del Rio, Texas, with 16 pumping stations equipped with electric power.

Conrad and Marcel Schlumberger record the first experimental electric log in France. It's a single lateral-resistivity curve recorded at fixed points and later plotted as a graph against depth.

Time depth measurements successfully performed by seismic crews of the Amerada Petroleum Corp.

Electric motors displayed



Baldor Electric Company, marketer, designer, and manufacturer of energy-efficient industrial electric motors, will be exhibiting in booths C10 and C11 at the Permian Basin Oil Show in Odessa.

Oil well pumping motors, and explosion-proof motors (in foot mounted, NEMA C-Face, brake motor, and close coupled pump design) will be prominently displayed, as well as large TEFC motors. All of these motors are widely used in the petroleum and petrochemical industries.

Unique Odessa-based service firm makes metal bellows

Bellows Systems Inc., an oil show exhibitor, was formed in February, 1980 with headquarters in Odessa and a satellite plant in Burbank, California. The Odessa facility was opened in June, 1980 at 101 Reed Avenue, the old home and shops of Reed Roller Bit. In September, 1981 the Burbank plant was moved to a new facility in Ventura, California.

BSI is the only OEM manufacturer of metal bellows headquartered in Texas or in the heart of oil country.

Since BSI is a new exhibitor and could acquire one small booth in the current show, only a sample of the material will be on display in Booth No. G-57 located in Building 'G'. The main plant will hold open house at 101 Reed Avenue for interested customers. Plant tours will be arranged for all interested parties.

The company was formed by purchasing the Bellows Department of Wooley Tool Manufacturing Division of Chromalloy American Corporation by Harry Palmer, a former Wooley Tool Vice President and R. K. (Dick) Wells, a former Woolley Tool plant manager, of Santa Paula, California.

Although BSI primarily concentrates its efforts toward serving the oil industry, it also extends its design and manufacturing capability to the aircraft, aerospace and missile industries.

BSI maintains a large stock of engine exhaust sustems and expansion joints for Cooper-Bessemer, Clark, Worthington, DeLaval, Caterpillar, Waukesha, White Superior and Ingersoll-Rand engines.

Metal bellows flexible exhaust joints for drilling rigs that are manufactured by BSI replace the original metal hoses used by most OEM engine suppliers. The bellows are designed to absorb the hot pipe and vibration imposed on the expensive turbo-chargers used on current drilling rig engines. Where particular service or design problems exist, BSI offers consultant services to its customers at no charge.

Exhaust manifolds and associated metal bellows expansion joints for the plants and natural gas compressor stations through out the United States and Central America are in stock at BSI. The company supplies off-the-shelf exchange many parts that would require up to two-year delivery from the original engine manufacturer.

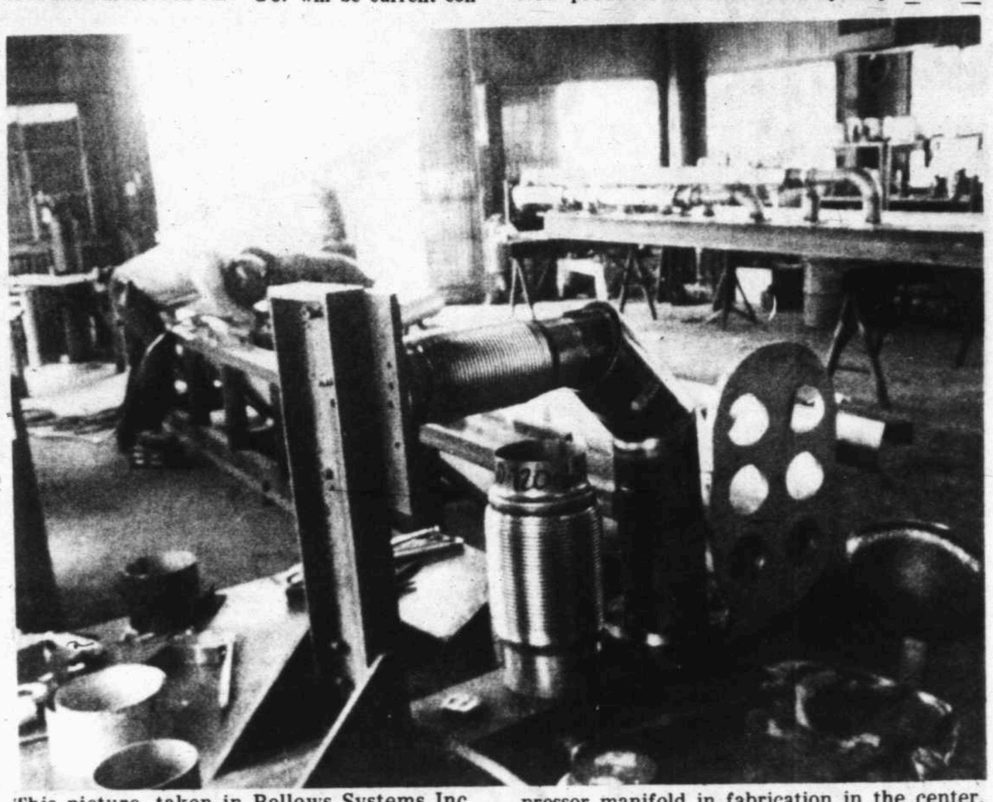
BSI can also save customers many dollars by modifying and overhauling an existing exhaust system. New systems can be built in record time.

Numerous expansion joints are in stock for Solar, Airsearch, General Electric and Westinghouse gas turbine engines. The 2-ply design offers reduced flange loading; increased vibration dampening and greatly extended service life.

Metal bellows expansion joints are available locally and when not in stock can be manufactured within three days. BSI manufactures the bellows and will serve its customers on an emergency basis. BSI is planning a major expansion of the Odessa facility before the 1984 Permian Basin Oil Show. We welcome our customers to visit our plant at any time.

On display in Booth No. G-57 will be current contract parts for the B-1 Bomber, Sidewinder missile and several fighter and transport aircraft. The booth will also contain a sample of the large gas compressor engine manifold in current inventory.

New products under study for BSI include down hole secondary recovery and artificial lift production pipe strings, manifolds for the railroad industry and heavy metal expansion joints. At least one of the above R&D products will be in production by early 1983.



This picture, taken in Bellows Systems Inc. Odessa shop, shows a special exhaust system for deep hole mining in the foreground, a gas compressor manifold in fabrication in the center, and a completed exhaust manifold for a gas compressor in the background.

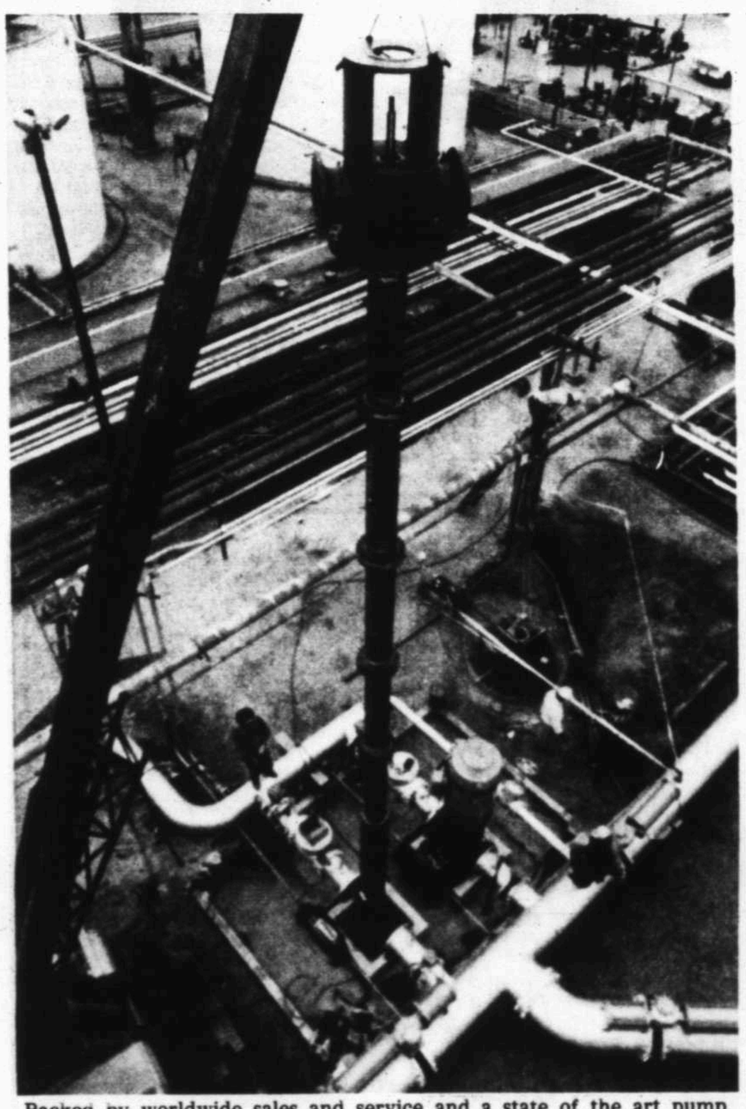
Pump builder to display industrial wares at show

National Pump Company manufactures Vertical and Submersible Turbine pumps for the industrial, agricultural, and municipal markets throughout the world. National will be featuring industrial products at the 1982 Permian Basin Oil Show.

Backed by worldwide sales & service, experienced engineering and a state of the art pump testing facility, National will highlight specific industrial applications.

A complete 8-inch can booster pump and motor cutaway will be on display along with cutaways of an 8-inch lineshaft pump, and 6- and 8-inch submersible turbine pumps.

National's capability to manufacture pumps reaches far into the realm of exotic materials including Carpenter Alloy 20, Zincless Bronze, Stainless Steel, and others. National Pumps are capable of producing up to 6,000 G.P.M. with ends up to 1,400 feet. Of special interest to oil producers will be National's fabrication experience for jobs of varying complexity and size.



Backed by worldwide sales and service and a state of the art pump testing facility, National Pump Company of Glendale, Arizona, manufactures many kinds of pumps, often made of exotic materials such as zincless bronze. At the Permian Basin Oil Show, the company will feature pumps used in the oil and gas industry.

OIL FACTS

1946

The Spraberry Field in Dawson County, Texas, is discovered by Seaboard Oil Company of Delaware.

The Texas Independent Producers and Royalty Owners Association (TIPRO) is organized with headquarters in Austin.

El Paso Natural Gas Company makes the first deliveries of natural gas through its 26-inch line from the Permian Basin of Texas to the California border at Blythe to serve markets in southern California.

The first commercial operations with induction logging take place in wells drilled with oil-base muds.

The deepest well record returns to Kern County, California, as Pacific Western Oil Corp.'s well in the Miramonte area is drilled to 16,668.

The shaped charge is used in Texas for the first time for well completions to perforate pipe.

Drilco is bringing better controls to the surface.

Drilco looks at the whole drilling picture. As a result, we're broadening our product line with our new rotating head and KICKOFF™ drilling choke system. Both bring better control to the surface.

Our rotating head is a flow diverter with a proven compact design. It can be installed and operated from the rig floor. A double seal, remote-controlled power clamp and a separate rotating assembly are just a few other features which make it the head of its class.

We've also added a system that includes the Willis choke you've relied on for years, but with all the latest improvements. Such as a specially designed control console that's easier to operate. Manufactured by Willis, a Division of Smith International, Inc., the KICKOFF drilling choke system is now joining the Drilco ranks. Alongside our world famed degassers.

For more information on how Drilco can give you total control, contact your local Drilco representative in Odessa, TX, (915) 337-5541; Midland, TX, (915) 682-6239; or Hobbs, NM, (505) 393-1536.

Sharp Drilling Company's derrickman Tommy Wood took a break recently from his other duties to catch mud samples on a location in Midland County. A geologist will analyze the mud to see if the well is drilling in a pay zone.

Oil output, demand headed for drop

By VIC OSTROWIDZKI
Hearst Washington Bureau

WASHINGTON — World oil production and demand are heading for another drop by the end of this year, slightly deeper than predicted earlier, according to separate data from the International Energy Agency and the U.S. Energy Department.

Oil production in the non-communist nations is expected to drop 6 percent in 1982 and oil consumption to decline 3 percent worldwide, the Department of Energy's Energy Information Administration (EIA) officials believe.

However, officials of the Paris-based international agency (IEA), whose 21 Western industrialized nations consume more than 70 percent of the non-communist world's supplies, currently estimate a slightly larger 6 percent worldwide drop in oil demand in 1982, for the third consecutive year of decline.

Originally, IEA officials had forecast that the decline in demand would not exceed 4 percent. U.S. officials had projected a 3 percent decline in 1982 and a 2 percent increase in 1983. Last year's drop in demand, however, amounted to 6 percent.

Industry officials attributed the slump to a switch away from oil to nuclear power, natural gas and coal; a rise in the dollar's value and a deepening recession around the world.

The Soviet Union is the top oil-producing nation, followed by Saudi Arabia, United States, Mexico, Venezuela, China, Britain, Indonesia, United Arab Emirates, Iran and Nigeria.

Energy Department officials now project that world oil inventories will be 19 percent below summer, 1981, levels by the end of 1982 and end-of-year stocks at 4.4 billion barrels for 1982 and 4.6 billion barrels for 1983.

EIA Administrator J. Enrich Evered, in a new report, said total petroleum use in the U.S. will continue to decline in the remaining weeks of 1982 for the fourth consecutive year to 15.5 million barrels per day.

Evered said consumption of distillate fuel oil, which includes diesel fuel, will likely fall by 2.1 percent by the end of 1982, then rise by 4.7 percent in 1983.

The administrator said residual fuel oil use will probably decrease by 17 percent in 1982, then fall again by an additional 1.7 percent in 1983. He forecast that although motor gasoline use will rise by 0.5 percent in 1982 it will drop sharply in 1983.

Evered, in the department's publication, "Short Term Energy Outlook," projected net petroleum imports would fall by 15.6 percent between 1981 and 1982, reaching 4.6 million barrels per day — the lowest level since 1982.

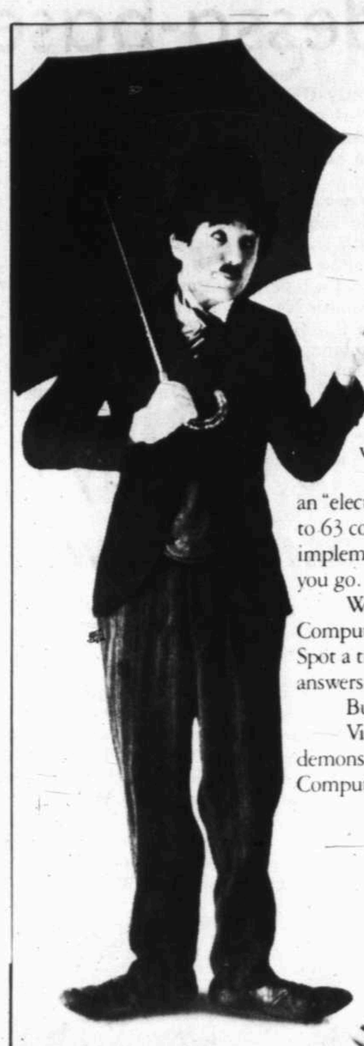
The publication projected U.S. dependency on imported foreign oil at 29 percent in 1982 and going up to 34 percent in 1983, and estimated American consumers' 1982 petroleum import tab at $65 billion in 1982 and $76 billion in 1983.

The survey also made projections for natural gas, coal and electricity production and consumption in 1982 and 1983.

It estimated natural gas consumption would fall by 2 percent to 18.9 trillion cubic feet by the end of this year and rise 4.3 percent next year. The department estimated that the average price of natural gas delivered to residential consumers will have risen at an annual rate of 17 percent between 1981 and 1983.

Coal consumption, production and exports are all projected to set new records in 1982 and again in 1983, with coal production hitting 869 million tons in 1982 and 881 million tons in 1983.

Little change was projected for electricity generation this year, with generation in 1983 estimated at 3.2 percent above the current level of 2.3 billion kilowatt-hours.



How to change a forecast.

Come into our store and see how an IBM Personal Computer can help you weather the storm of economic variables.

With software like VisiCalc* (really an "electronic worksheet") you can calculate up to 63 columns and 254 rows of numbers—implementing formulas and changing labels as you go.

We'll also show you how an IBM Personal Computer can help you create a sales forecast. Spot a trend. Test a budget. And find the right answers to your "what if" questions.

But don't wait for a rainy day.

Basin's rolling land plowed, grazed before oil was hit

By ED TODD
Staff Writer

The rolling plains of West Texas were grazed long before they were plowed, seeded and farmed, and eons before they were bit into for that rich substance called "black gold."

Though Midland — the "Tall City" of skyscrapers and office complexes — is touted as headquarters of the expansive Permian Basin oil field, the city is also the hub of an agricultural economy which annually averages $11 million in income.

While the 10-year average agricultural income is $11 million, the lowest agricultural revenue during that period was $6.7 million in 1971 and the highest payoff was $17.5 million in 1979.

Midland County's mainstay crop is cotton. This year, farmers planted 34,487 acres of cotton out of 85,266 acres of crop land. Other cash crops included alfalfa, wheat, oats, rye, grain sorghum, vegetables, watermelons and about 35,000 pecan trees.

The county's beef cattle enterprise includes about 5,000 cows calving, about 3,500 ewes of fine-wool breeding, 600 dairy cattle and about 200 swine. Approximately 475,000 acres of rangeland is in native pasture; almost 80 percent of the county's total acreage of 600,320 is in rangeland.

All told, the county boasts 180 cropland producers and 67 ranchers.

Historically, cotton is planted on 5 to 10 percent of the county's total acreage, but "the king" of Southern crops produces 50 percent or more of the total gross agricultural income.

Upland cotton production in Midland County has shifted from the long-staple, long season, picker-type cotton of the 1950s and early 1960s to the shorter-season, shipper-type and insect- resistant cotton varieties. A drawback of the longer-staple cotton was its inherent need for more water, more fertility, more labor and more attendant machinery than that required by the shorter-staple cotton.

Now, however, the new and hardy cotton varieties have a better cost-return ratio than could be expected from the longer-staple cotton due to the escalating fuel, fertilizer, machiney, labor and interest costs of today.

For the past two seasons, cotton producers have faced severe economic problems which are rooted in a generally depressed economy and in the over-supply of cotton. Last year's cotton production in the United States exceeded domestic and export needs by 3 million bales.

In last year's bumper crop, Midland County farmers averged 47 cents per pound for their lint, while their average production costs ranged from 55 to 60 cents per pound. Consequently, prices fell below projections and many producers suffered losses.

In 1981, farmers planted 42,266 acres in cotton. This year's 34,487 acres of cotton is about a 20 percent reduction. Erratic weather conditions such as the wind and washing rain in May and June caused the loss or late replanting of acreage. This year's paltry yield may average half a bale to an acre.

To offset last year's cotton surplus and this year's depressed prices, cotton farmers had the option of reducing their planted acreage by 15 percent under provisions of the 1982 U.S. Department of Agriculture's Upland Cotton Farm Program. Those farmers who exercised that option qualified for a quaranteed loan rate of 57.08 cents per pound. They are banking on working the supply-demand market in their favor.

The USDA program gives the farmer the option of placing his cotton in storage and receiving the government loan of 57.08 cents per pound for his cotton at harvest; however, the guaranteed loan will vary due to the grade and staple of cotton. Should market conditions get on the upswing, the farmer could "redeem" his cotton by repaying the loan and picking up interest and storage charges, and thereby take advantage of improved prices.

The program allows the grower to gain some cash flow at harvest when creditors are wanting repayments and to retain control of his crop to take advantage of improved market conditions. This year, about 84 percent of Midland cotton growers signed up for the 1982 federal cotton program.

Aside from the wind and washing rains of May and June, cotton was placed under stress by the dry August and early September maturing season. Consequently, much cotton opened prematurely.

An estimated 2 million acres of cotton ruined in the High Plains — from Lamesa northward to Lubbock — in June by adverse weather which, ironically, would reduce the cotton supply and help to raise prices.

In the meantime, growers are "tightening up" and are using all management options available to survive.

OIL FACTS

1859 - On a stream called Oil Creek, near Titusville, Pa., Col. Edwin L. Drake drills 69 feet, six inches and discovers oil. This is the first well ever deliberately drilled to find oil.

Lynis T. Barrett, a Confederate veteran, acquires the first oil and gas lease in Texas. It covers the Skillern tract in Nacogdoches County.

1860 — In April, the first oil lease to mention gas was recorded in Warren, Pa.

G. W. Brown, a newspaper editor, drills a 4-inch hole to 100 feet near Paola, Kansas. This is the first oil well drilled west of the Mississippi.

Rodolphe Leschot, a French civil engineer, uses a power-driven rotary drill with a diamond-studded bit.

This rig derrick is about ready to be moved to a new location near Sonora from the TMBR Drilling Company yard in Midland. TMBR is the new, wholly-owned subsidiary of Tom Brown Inc.

Fort Worth Pipe expands pipe mill operations

Two new expansions are nearing completion at Fort Worth Pipe Company's ERW mill located at Conroe.

The Wean United ERW pipe mill began operation in January, 1980. The mill manufactures 2 3/8" - 8 5/8" O. D. oil country tubular goods through API grade K-55 and API line pipe through grade X-go. The mill has an annual capacity of 120,000 tons.

The two expansion projects which will be on stream by November 1, 1982, are a high speed threading line and a quench and temper facility. The automated high speed threading and hydrostatic testing facility which adjoins the mill has the capability to thread and test in excess of 120,000 tons a year in sizes from 2 3/8" — 9 5/8" O.D.

The threaders and hydrostatic tester were furnished by PMC Industries and Taylor Wilson Manufacturing Company respectively. The quench and temper induction equipment was furnished by Westinghouse Electric. It is capable of producing oil country tubular goods with a minimum yield of 95,000 psi and has an annual capacity of 50,000 tons.

OIL FACTS

1860

In December, a company organized by Wilson M. Laird in Erie, Pa., drills a well on Laird's farm on the shore of Lake Erie to a depth of 500 feet but finds neither oil nor gas. This is the first recored dry hole.

With only two shallow wells competing with his, Col. E. L. Drake complains there is overproduction.

There were 240 wells drilled of which 201 were productive, for total production for the year of 500,000 barrels, valued at $4 million.

Charles Lockhart of Pittsburgh goes abroad with samples of crude and refined oil to show Europen merchants the value of petroleum.

Value

British playwright and wit Oscar Wilde once described Americans as "a race of people who can tell you the price of anything and the value of nothing."

It is true that the American people enjoy the liberties of a free economy. They may buy what they want and pay the going price if they are so inclined. On the other hand, the very competitive nature of the free marketplace makes it imperative that, sooner or later, the producer must deliver a product of real merit. Sooner or later, the price finds its own level.

What has this to do with El Paso Products? We are technicians with the skills to convert a raw material into an interim product. This we deliver to others to be converted into finished goods for which millions gladly pay a fair price.

It's part of a chain that says, "Mr. Wilde, you were wrong. In the end, it is the customer in a competitive marketplace who establishes the value of everything."

Being in right place at right time lead to unique oil career

NORMAN — By being in the right place at the right time, Jerlene Bright has made a rather satisfying career for herself.

An interest in data processing led Bright to the University of Oklahoma in 1965, about the same time OU was beginning to use its computer facilities to store information about the nation's oil and gas fields. She and others on the staff soon assumed important roles in a pioneering effort to collect energy data.

Today, Bright is director of what has become one of the largest non-governmental energy data-gathering organizations in the world. Her Information Systems Programs division of OU's Energy Resources Center builds and maintains vast computer databanks under contracts totaling more than $2.5 million for federal agencies and professional organizations.

"I came in at a time when computers were just beginning to be used to lend assistance in exploration activities," Bright recalls. "In the past 10 years, we've seen a dramatic turnaround in thinking, and the computer has become an important tool."

Now, just as OU is taking another innovative step in energy research with its $65 million Energy Center program, Bright and her ISP staff stand ready to provide government and the energy industry with the information they need to make their way through a challenging, uncertain future.

"It's rewarding to work for a university that today is in the limelight," Bright said. "The people are here and the building is coming, and it's just a matter of putting it all together."

When Bright came to Norman in the mid-1960s, data processing was still an infant business. The concept of a university using its computers to store important energy data was an idea just beginning to take shape, but it took Bright very little time to become involved in the effort.

Soon after taking a job in OU's administrative data processing department, Bright became supervisor of data entry activities in the Research Computer Lab, and then was named project coordinator — a position in which she was responsible for completing work done by the university under government contracts.

When the lab was transferred to what was known then as OU's Research Institute, Bright assumed responsibility for the Oil Information Center, a program created in 1962 for storing well logs and scout tickets from the Oklahoma Corporation Commission along with strip logs, completion reports and industry-donated data.

Later, the log library was separated from the OIC, which was destined to grow into something much bigger.

Bright credits Jack Morrison, a former assistant director of OU's Merrick Computing Center, with guiding the university toward using its computer facilities for energy research and making the contacts with government and industry that spurred OIC's growth.

"My involvement really just grew with the computer system," she said.

OIC picked up a major contract from the Department of the Interior in 1968, and was off and running. The contract led to development of the Petroleum Data System, which contains information on oil and gas fields in the United States and Canada. It also helped establish a reputation of quality for OU's energy data program in Washington and elsewhere.

In 1973, the OIC was renamed Information Systems Programs, because its data processing activities had expanded to include energy sources other than oil. Its emphasis, however, continued to be on serving both government and industry, a stance Bright maintained when she became ISP's director in 1974.

"The approach hasn't changed much over the years," Bright says. "When you have a quality program, it largely sells itself."

The major catalyst was a contract from the U. S. Department of Energy, providing ISP with $6.4 million for a three-year project to survey major and independent oil companies and develop estimates of national oil and gas reserves.

Nearly overnight, ISP was transformed into a major data-gathering organization. "Our staff grew from 26 to approximately 120 in little more than a year's time," Bright said.

"We all learned," she remembers. "It threw us into more of a business mode than an 'R and D' (research and development) mode. We absolutely had to recruit the right people to make the deadlines."

Realizing that a strong program manager was needed, Bright recruited Bud Barlow, who is currently ISP's associate director.

"The rush created a chaotic situation, but we were able to identify functions and find the right people as the weeks went along."

Although Bright was in the driver's seat, she says it was the skill and dedication of her staff that ultimately ensured ISP's biggest success to date.

For the future, Bright is optimistic, despite the potential for losing funds in a proposed dismantling of the DOE. She believes ISP is still in the right place, and at a very good time.

When ISP became part of the research-oriented Energy Resources Center in 1978, it found itself a home, Bright said. The program also benefits from its proximity to a number of prominent, skilled energy experts who call OU their academic home.

"Although we have had to cut back because of the current administration's budget cuts, government's and industry's belief in the quality of our product has kept us busy," she said. "In fact, the situation in DOE may create additional work for us to support energy information efforts that were previously supplied under other DOE contracts or by DOE staff.

"All in all, our future is bright. A new division for marketing the Petroleum Data System and our other energy databanks was created early last year, and industry and government decisionmakers continue to need the kind of information we provide. The quality of our work is well known, and I think the university can be proud of IDSP."

"I believe we help contribute to the reputation of excellence for which the university is striving.

OIL MEN SAY:

Barring a major foreign catastrophe, such as a severe conflict in the Middle East, the next energy crisis should NOT happen, but there is NO guarantee that the next crisis will NOT happen.

— The American Petroleum Institute

Air drilling company to show equipment

Ingersoll-Rand Compression Services will be displaying equipment it sells or rents to the oil and gas industry. An Ingersoll-Rand Compression Services Gas Compressor package will be displayed. A smaller model of I-RCS' KOA direct drive balanced opposed gas compressors will also be featured. I-RCS offers to the oil patch, compressor packages from 65 hp to 1600 hp, through contract compression, rental, sales, or lease.

Originally headquartered in Tulsa, I-R Compression Services began in 1963 as I-R Drilling Services — the first established division of the Ingersoll-Rand Company. As the name implied, full air drilling service was its reason for being. The parent company manufactured and sold air and gas compressors, while it provided customers with compressed air services for drilling. Thus, with 15 people, 24 primary air compressors, and 10 booster air compressors, the I-RCS success story began.

It was a full-scale operation by 1964, with its roots established by several large-hole drilling jobs at the Atomic Energy Commission Nevada test site and many smaller drilling jobs primarily in the Arkoma and Permian Basins.

By 1966, I-R Drilling Services was the world's largest air drilling service company. During that year it also expanded to supply compressed air to chemical and petroleum plants. To reflect this expansion, it changed its name in November, 1968, to I-R Drilling and Compression Services, and then again in January, 1971, to I-R Compression Services to better describe the even more expanded services it was offering the oil, gas, industrial and process markets, which by that time also included compressor services.

Receipt of the first Model C-25 Centac Air Compressors in 1975 enabled it to grow farther in the process and industrial markets, and the following year the parent company picked I-RCS to market the first Ingersoll-Rand Rotary Engines by placing twelve rotary units in its rental fleet.

To further service the international market, in 1975 it also began equipment fabrication in Wythenshawe, England; and in 1977, it staffed an office in Holland to serve Europe, North Africa, and the Middle East. In 1978 it also staffed and opened its first Canadian office in Calgary, Alberta and an Egyptian branch in Cairo, Egypt. By 1981, it had such diverse contracts as Centac Rental compressors in Amsterdam and Kuwait, gas compression projects in Libya, Tunisia and France, and an operations and maintenance project for four Ingersoll-Rand GT-22 Centrifugal Turbo Compressor sets on an offshore platform in the Gulf of Suez.

Today, Ingersoll-Rand Compression Services is headquartered in Broken Arrow, Oklahoma.

Museum to exhibit a 'guesswhat'

A working model of a cable-tool drilling rig and a "guesswhat" will be featured in the oil show display of the Permian Basin Petroleum Museum, Library, and Hall of Fame, Midland.

A recent acquisition, the model was donated to the museum by C. L. Pardue of Ferris, Texas. The model performs many of the functions the full-sized rigs did during their Permian Basin heydays between 1923 and the mid-1930's.

Pardue made the rig after retiring from Mobil Corporation. His son, Lon Pardue, lives in Midland.

Modernized versions of the cable-tool machines are still used on shallower wells in many parts of the world. The cable-tool method of drilling was invented by the Chinese at least as early as 600 B.C.

The display will also feature what the museum staff terms a "quesswhat" — a device used by oil people but not readily recognized. Visitors will be asked to guess its function.

The museum plans a number of drawings during the course of the four day Oil Show with participation free.

Color photographs of exhibits at the museum will be shown as part of the display.

Members of the museum's volunteer group will be staffing the booth during the oil fair. The museum staff is constructing the exhibit's units and will be coordinating activities at the show.

Paul Wecker and Mrs. John Rhea, both of Midland, study a scale model of the Oil Show display planned by the Permian Basin Petroleum Museum. Both are members of the Santa Rita Club, an auxiliary group which performs many functions for the museum.

Odessan Fred George new president of AOSC

By LESLIE HAINES
Energy-Business Writer

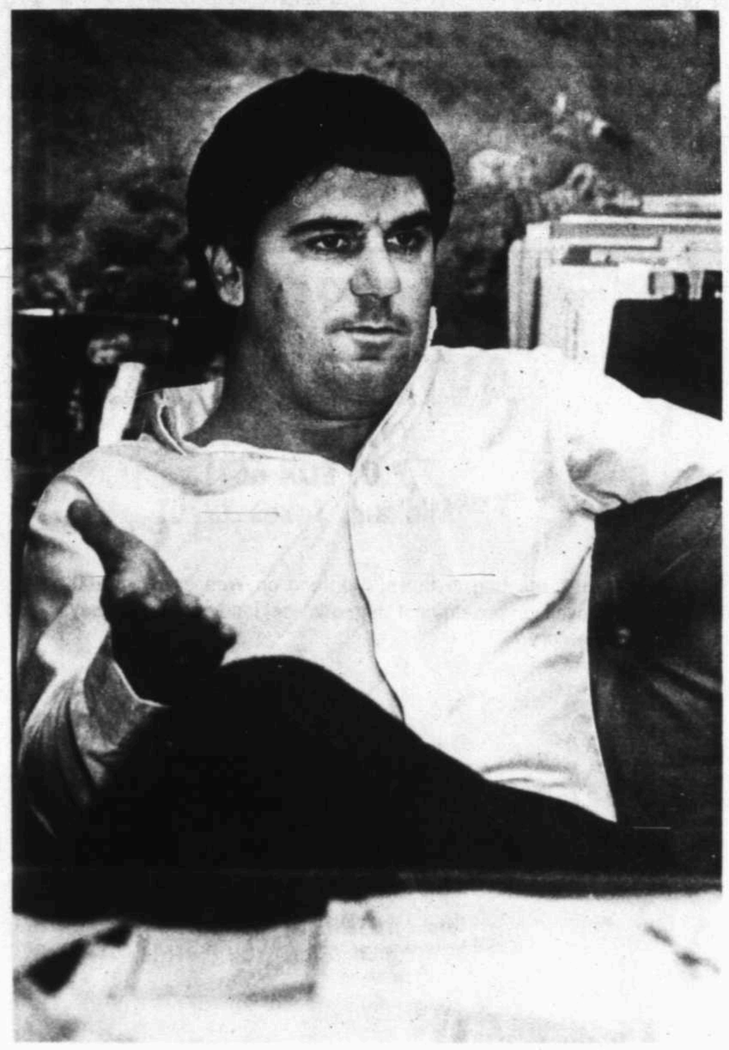
When people speak of the rig count, they usually mean the number of drilling rigs making hole, but when Fred George speaks about the rig count, he means the oil well servicing rigs which play an equally important part in the oil and gas industry by doing completions, workovers and remedial work to keep production going.

George is the recently-elected president of the Association of Oilwell Servicing Contractors — a group representing 5,300 service rigs, 500 contractors and 500 associate members (suppliers) in 20 states.

He is also president of Charles J. George Inc., a long-time Odessa company with eight servicing rigs, 11 swabbing units, one reverse circulating rig, three hydrostatic tubing testers and some more equipment due to arrive in the next 30 days.

It is perhaps fitting that George became president of the AOSC for the 1982-83 term — his father, Charles, helped start the association in Odessa in 1947.

"He never wanted to be a national officer, although they asked him several times," said the younger George. It means a lot to him now to be able to travel across the nation meeting with well servicing contractors in different regions and sharing ideas with them. Many of the principals of these companies were trained in Odessa years ago by his father's own company, which young George bought in 1976.



Fred George

"I run into them all over the place," said George. "They'll come up to me and tell me they worked for my father back in 1956 or whatever."

While the AOSC is concerned with the welfare of its members, and the industry as a whole, "we can't put rigs back to work," George admitted. "What we do is accumulate helpful information and disseminate it among our members. We are real big on safety and training, management and manpower development."

Well servicing has been the entry level part of the oil business for years, and has normally had a high turn-over rate, he added.

The servicing business is directly tied to the price of crude oil and to the drilling rig count. When both fell in January, 1982, the service rig count fell also. The relationship has been that way since 1975, George said.

Today, about 50 percent of the American service rig fleet is "parked," as George puts it.

"Our business is controlled by the world economy, and I don't see any major changes anytime soon," he said. "Those of us who are going to stay in business are going to have to make it the way it is today. My guess, and it's only a guess, is that in the latter two and a half months of 1982 it will pick up somewhat — maybe 5- or 10 percent. It will continue on through January and February, and then fall off again in March."

The well servicing business is traditionally a seasonal one, with activity picking up in the fall and winter months and slacking off in the spring and summer.

One problem, aside from the economy, is that the servicing fleet expanded beyond its needs, George said. "We have about 600 too many — there's about a two year backlog of rigs right now, and that includes 200 or 300 rigs that have been manufactured, or are in various stages of being built, and need to be sold."

In June and July, the latest months for which data is available, Well Servicing magazine reported the extent to which activity is down. Guiberson Division of Dresser Industries Inc., which monitors service activity, reported 4,005 rigs working out of 6,547 available in June, for a 61 percent rig utilization average nationwide. By July, only 3,846 rigs were working out of 6,558 available (up 11 from June), for a 50 percent utilization rate. In July, the West Texas region of the country enjoyed the highest rig utilization rate, at 64 percent. Other regional rates reported were: Rocky Mountains — 55 percent, Midcontinent — 63 percent, Texas Gulf Coast — 59 percent, Louisiana — 55 percent, Eastern U.S. — 47 percent, and Canada — 45 percent.

The slowdown should produce at least one major benefit, George believes, and that is increased rig safety. In remarks to the AOSC membership, as printed in the president's message in the latest issue of Well Servicing magazine, George said, "Now is the best time in the history of our industry to attack the (accident) frequency rate."

He went on to point out that fewer rigs will be working in 1982, the ones that will work may work fewer hours, there are many newer rigs with better equipment, and many crews have been consolidated and the less experienced employees weeded out. All factors combined should lead to greater safety performance.

The AOSC has always emphasized safety to a large degree, George said. In conjunction with PETEX (Petroleum Extension, the continuing petroleum education program of the University of Texas at Austin), the AOSC sponsors several well servicing and workover class room schools throughout the year, in Odessa, Houston and in the Overthrust region.

It covers everything from handling tools to management training and getting along with people.

The future calls for creating a hands-on school in Odessa on land already donated by UT-Permian Basin. The program has received approval by the UT PETEX board, and the AOSC will be involved, George said.

BASIN HOLE BORING, INC.

P.O. Box 1721 MIDLAND, TX 79702 915-682-5890

BASIN HOLE BORING, INC. was founded July 1, 1981, to fill the needs of the drilling industry for a local source to bore holes in round bar stock. Their modern shop is capable of drilling up to 1200 feet a day in barred stock measuring from 3/4 inch to 6 inches inside diameter with up to 13 inches outside diameter and a 40 feet length maximum.

Their 12,000 square foot shop and ten acre customer storage facility is located at 2600 East Highway 80. The shop has overhead cranes capable of handling 10 tons, powered handling equipment, bar straightening facilities with a 500 ton capacity, and sawing ability up to 18 inches.

Their staff, representing over 100 years combined experience in the oil industry, has the capabilities to repair any drilling tools needed in the Permian Basin.

For more information contact Lee Glover or Rayford Calhoun, 915-682-5890.

Totco to show drilling instruments

Totco Drilling Instrumentation, manufacturer of hydraulic, pneumatic and electronic oilfield instruments, will be displaying at the Permian Basin Oil Show, key new products to improve drilling efficiency.

The Visulogger Remote Data System TM, a major enhancement to the Visulogger System introduced in 1972, allows Totco customers to access Visulogger generated data on any of their rigs - from anywhere in the world. It will aid in expediting drilling decisions made in the home office by providing vital drilling parameters to responsible parties quickly and clearly. It can also increase supervisory involvement without increasing time at the wellsite.

The first stage of the VRDS, the Portable Master Station, is available now. Supervisory personnel on the go can obtain printed rig activity, by connecting the portable terminal to any standard telephone. Also on display is the soon to be released Fixed Master Station, which can be centrally located in a district, region or home office to receive rig data via domestic/international phone lines, microwave, UHF/VHF telemetry or satellite.

An electronic innovation in digital automatic drillers, the Drill Master TM, increases sensitivity and permits reliable, constant weight on bit. Conventional automatic drillers use "drumrider" feedback units which tend to suffer friction, drum wear on air line freeze up. But the Drill Master uses multiple solid-state proximity switches to detect drum movements which do not contact the drum or line in any way. It gives Totco customers electronic sensitivity and reliability with a simpler and more economical installation.

The Ton-Mile Indicator is the reliable way to measure ton-miles and maximize drill line life. The indicator measures every movement of the drill line, regardless of direction, to provide an overall accuracy of plus 3 percent. This means all work is counted — drilling, coring, setting casing, round trips, working stuck pipe and other downhole problems.

Thus, drilling contractors avoid making cuts too soon and it can reduce drill line costs by as much as 30 percent. It also helps increase safety measures against late cuts and prevents unscheduled downtime.

Also to be introduced is the new Electronic Depthometer for installation on well service rigs which provides depth readings for tools attached to the sand line going down the well. The operator's readout is in large, fluorescent yellow numbers for easy reading at a distance. It has storage and alarm capacity for up to six present depth readings to warn the operator when he is approaching an objective or when coming in or out of the hole.

These new products represent Totco Drilling Instrumentation's continued dedication to making the energy search more efficient.

The company maintains 56 sales and service locations nationwide to provide its customers with the expertise and quick response they deserve.

Other key products to be displayed are the 38" Driller's console, 6-Pen Drilling Recorder, Controlled Vertical Drift Instrument and E-Mud System. Visit Permian Basin booths A-3 and A-4 to see these products in action and meet a Totco salesman who can provide more details.

Midland's Most Ambitious Class A Office Park Scheduled For Completion November 1982

The prized advantages of satellite office centers — ample parking, open green space and accessibility to major traffic arteries — are transported to the Central Business District in Dinero Plaza, Midland's most ambitious Class A office park.

Envisioning an environment of continental sophistication coupled with utmost convenience, Dinero Plaza offers the ideal downtown business atmosphere featuring 235,000 square feet of space in two uniquely designed six-story structures fronting a landscaped plaza.

Midland's Drilco Industrial building special 12-foot bit

By LESLIE HAINES
Energy-Business Writer

If one of your engineers ever gets a strange notion to drill a hole, or more accurately, rotary drill a mine shaft, 144 inches wide, Drilco Industrial will be ready to accomodate you.

The mining equipment company, a Smith International Inc. subsidiary, is proceeding apace with design and manufacture of an immense, but complete, drill string for a federal contract at its yard and headquarters in Midland.

The Department of Energy awarded the $3.5 million contract to Drilco Industrial last spring.

The equipment — 144-inch and 110-inch diameter drill bits, and 90 inch OD drill collars — will be used near a nuclear power plant in Hanford, Wash., to sink a 3,600 foot shaft through basalt rock. It is the first of five DOE pilot projects experimenting with nuclear waste disposal.

The site of the four remaining projects is still being determined.

"We think this is a forerunner of the future," said Jim Brand, Drilco Industrial vice president and general manager. "If the project is successful, we anticipate a continuing market which we would hope to participate in for many years."

Scheduled completion and shipment date from the Midland yard is December 15, 1982. Brand says it will take about 75 truckloads over a period of several days to move all the pipe, bits, stabilizers and related equipment to Washington.

The initial 700-750 feet of the shaft will be drilled by a 144-inch Drilco bit especially made for this project. Once the bit has drilled below all aquifers and casing has been set, a 110-inch bit, also made by Drilco in Midland, will complete the shaft to 3,600 feet, drilling through basalt, one of the hardest rocks known to geologists.

Several acres will then be mined out at the bottom of the hole, to be used as space for nuclear waste isolation. The waste will be stored in a variety of containers provided by the government.

The idea of underground storage of hazardous wastes in this manner has been around for several years, but in general, the technology to accomplish it safely has only recently been fully developed, Brand said.

Contracts for the drilling rig, casing, mud and other equipment associated with the project have not been let yet, he added, but drilling is expected to begin early in 1983. Engineers estimate it will take a year to reach total depth.

The 144-inch drill bit took Drilco Industrial two months to make and contains 14 mill tooth cutters. The 110-inch bit contains 12 tungsten carbide button cutters.

Drilco is furnishing everything from the huge swivel to the bit to 150 joints of 13 3/8-inch OD pipe for the mining project. The company has experience with holes of this diameter which were even deeper, Brand said, although this is its first contract to provide the entire drill string.

The hole has to be straight because elevators will be installed in it to lead to the underground storage area.

The company feels this project represents the mining industry's acceptance of rotary technology.

"Hundreds of engineering hours have been put into this — I can't tell you how many," Brand said. Everything was designed by Drilco personnel in Midland.

"The background of all of these tools, these basic designs, has been developed over the years," Brand said, "going back to the early days when Stanley Moore first established Drilco and Drilco Industrial in Midland."

Photo by Bill Hunter

Drilco Industrial's vice president Jim Brand looks a little forlorn, and certainly outsized, by this 144-inch drill bit which was specially made at Drilco's Midland yard for a Department of Energy pilot project in Washington state.

DRILLING... The afternoon sun had begun its downward path to the horizon behind Sharp Drilling Company's Rig 47, making hole in Midland County for Texaco earlier this year. The rig was heading for 11,500 feet.

Oil field thieves slow down along with petroleum industry

By RICHARD ORR
Staff Writer

The current slump in drilling activity has correspondingly cut down on the number of oilfield thefts reported to local authorities. But it's a momentary lull at best.

"We've not had many thefts reported to us in Midland County lately," said Gary Painter, a 35-year-old sheriff's department investigator and former district manager for an Abilene mud company. "A lot of rigs are stacked. When the economy picks up, though, so will the thefts."

Something else that may account for a decrease in the number of theft reports is that operators don't pay much attention to stacked rigs. "Once they go into the yards to put the rigs back in the field, they'll notice the stuff that's been taken," added Painter, who estimates that in the past two years local operators have lost $2 million worth of equipment — not counting the loss of crude oil.

"There's a considerable amount of crude oil theft that goes on, but there's no way to even estimate how much," he said. "Sometimes the operators themselves don't even know it's gone."

Equipment is expensive, with some mud pumps costing up to $25,000, and power tongs that can run $75,000. One way of cutting losses is to mark equipment with identifying numbers, much like homeowners do with their household belongings, Painter advised.

Even when the ID numbers are welded over or ground out, Painter said "there are ways" to identify altered equipment.

Marking equipment can be costly and this leads to some reluctance on the part of operators to undertake the task. "This is something we're trying to get people in the oilfield to do — mark or brand their equipment. It may not cut down on the number of thefts, but it does lead to an increase in the recovery of stolen equipment."

The arrest rate for oilfield theft is low because equipment and crude stolen in one part of the country can be sold — virtually overnight — in another part.

A recent state law requires those engaged in the buying and selling of used equipment to maintain complete records of transactions, including a description of the equipment, names and addresses of the parties involved and bills of sale.

A fine of $500 — for each offense — can be imposed for violating the law.

Another feature of the law is that someone who deals in used equipment can be required to produce the records to a police officer on demand. No warrant is required.

Law enforcement agencies — including the Department of Public Safety, the Texas Rangers and sometimes even city police where oil wells are located inside city limits — are becoming increasingly cognizant of oilfield theft as the recession makes otherwise legitimate operators more prone to buying stolen equipment, which can often be purchased at half the normal price.

The Petroleum Industry Security Council of Austin conducts theft seminars for law enforcement officers who often trade intelligence information with corporate security officers at the close of the seminars, which are conducted nationally.

"Quite a few people are organized to steal in one part of the country and sell it in another part — sometimes overnight," said Painter. "It's very hard to track down, especially with oil. It may take months to find out who's doing it and how."

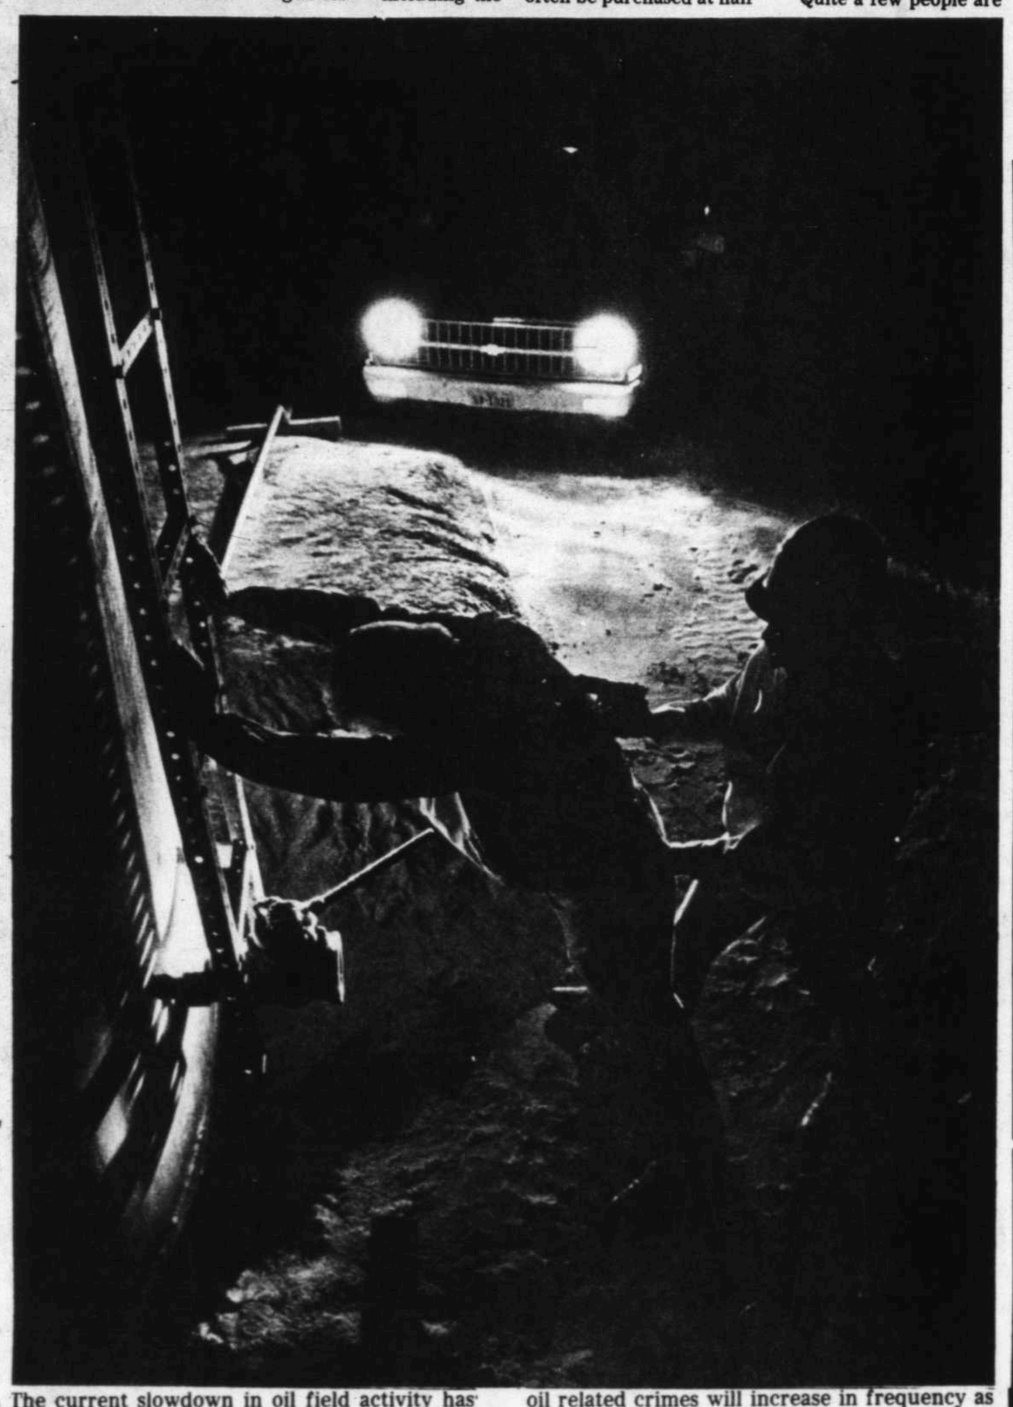
"Micro-dotting" is a recent technological breakthrough that allows liquid and bulk oil products to be "branded" much the same way equipment can be marked.

"The principle of the Micro-Dot is simple but yet very effective," says a brochure put out by Micro-Dots Inc. of Edmond, Okla. "It serves to positively identify the ownership of a liquid or solid."

The technique uses tiny pieces of micro-film that contain the company name, legal description of the lease, the tank battery number and special coded numbers that are computer-printed and change with each set of Micro-Dots.

They may be used in tank batteries, transports, pipelines or oil tankers. "Law enforcement officers also will be able to determine if this oil has been taken from a pipeline gathering system where multiple producers are placing oil into a pipeline system," says the brochure. "Refineries will also be able to determine if they are receiving stolen goods."

The emphasis on oilfield theft has resulted in the establishment of a special toll-free hotline and rewards for information that can be used to apprehend oilfield thieves. The number is: 1-800-OIL-COPS.



The current slowdown in oil field activity has caused a momentary lull in the number of oil field equipment thefts, but authorities believe oil related crimes will increase in frequency as operators get back to work.

OIL FACTS

Depending on the geology of a given oil field, the recovery factor using conventional production technology ranges from 10 percent to 70 percent of what's in the ground. The average is estimated at 30 percent, says National Supply Company.

At Booths G98 and G99, Daniel Industries will display flow products and equipment used by the oil and gas industry, including orifice fittings, meter tubes, turbine meters, electronic totalizers, solarflow computers and chromatographs.

Daniel Industries will be exhibiting flow products for oil and gas

Daniel Industries manufactures and sells flow products and equipment for the oil and gas industry. The company's Permian Basin Oil Show Exhibit will include products from the entire line, both mechanical and electronic.

Some specific products from our mechanical line include orifice fittings, meter tubes, check valves and turbine meters. Some products from our electronic line include electronic totalizers, solarflow computers, microprocessor flow computers and chromatographs.

Paul Daniel, founder of Daniel Industries, began manufacturing in Los Angeles in 1932. A branch office was opened in Houston in 1940. Manufacturing facilities are located in Houston. The facility was moved from Los Angeles in 1956. Currently the company is located in Midland.

Daniel's booth for the Permian Basin Oil Show will be Numbers 98 and 99 in building G.

Plastic pipe moved from mines to oil field

Polyethylene pipe was first introduced in the late 1940's for mining applications primarily because of its superior corrosive resistant characteristics. Since then it has emerged into one of the more popular thermoplastic systems for low pressure applications.

Poly Pipe Industries, Inc. was organized in early 1977 by a group of oil men who recognized the growing demand for polyethylene pipe in oil field applications. Since that time, Poly Pipe has doubled production and successfully entered the gas utility and industrial markets.

Its success is due to the flexibility of its production department, availability of standard stock sizes and promptness from its delivery trucks. The inplant quality control department insures only the best quality pipe manufactured under the stringent API—5-LE and ASTM specifications. Upon request, Poly Pipe will furnish certificates of compliance as origin of resins and other test criteria for applicable specifications.

Some polyethylene piping advantages are corrosion resistance, flexibility, resiliency, abrasive resistance, leakproof joints, lightweight and coiled pipe, excellent flow characteristics, ease of installation, and environmental stress crack resistance.

Before designing a polyethylene piping system, the designer should take into consideration different variables that can affect the pipe, fittings or joints.

The first step would be to determine if the material to be transported is suitable for polyethylene pipe. Poly Pipe's chemical resistance chart will show how different materials react under different temperatures.

The next step is to determine the type of system to be used. Different design parameters are used for different piping systems. For industrial applications, the ASTM-D-3035 and D-3350 standards are commonly used.

The maximum high temperature for poly pipe is 140 degree F. Since all design criteria for poly pipe is based on 74 degrees F., for temperatures between 74 degrees F. and 140 degrees F., a linear interpolation may be used to establish a temperature service factor.

For liquid flow, poly pipe recommends the Hazen-Williams equation. The constant for the inside pipe roughness has been determined by the PPI to have a factor of 150.

When computing the working pressure for a poly pipe system, it is recommended that the pressure rating of the system be 80 percent of the pipe pressure rating.

Poly pipe has been successfully used to transport materials in many above ground applications. However, certain environmental conditions can cause changes in the physical properties of the pipe. The sun's ultra violet rays will degrade polyethylene pipe, especially during the summer months. This factor plus an increase in temperature will add a substantial increase in working pressure for any above ground system. Where some materials such as water act as a cooling agent, others such as natural gas will expand, and can possibly lead to stress cracking. In an above ground applications, Poly Pipe recommends our carbon black pipe which helps retard the ultra violet rays.

Texas Pup showing first time

Texas Pup Inc. is a manufacturer of downhole tubular pup joints. The company was founded in February 1980 and serves the oil industry through distributors located throughout Texas, Oklahoma, and Louisiana.

Texas Pup Inc. is located in Willis, just north of Houston, on a six acre yard with an 18,500 square foot manufacturing complex.

The 1982 Permian Basin Oil show will be the first exhibition in which Texas Pup will participate. The company will be pictorially showing the industry what's involved in producing quality pup joints. The exhibit will graphically show the how's and why's of pipe forging, normalizing and heat treatment of various grades of steel, the proeess of threading and hydrostatic testing, and identification of various sizes and grades of materials by color code identification.

Samples of finished products will be on hand for visual inspection. Along with this, API specifications pretaining to the manufacture of pup joints and a quality control manual will be available for reference.

OIL MEN SAY:

It is far more important to exercise our minds by planning what we CAN do in the future, than let our minds become lazy by worrying about what we CANNOT do in the present.

Turbine Specialties Inc. can reassemble all makes of turbochargers used in the oil patch after repairing, overhauling or balancing them. The company's exhibit will show damaged and rebuilt turbocharger parts and blades, with various photographs and cutaways.

Turbine Specialties will exhibit turbocharger technology at PBOS

Turbine Specialties Inc. of Salina, Kansas, is the largest and most complete turbocharger repair center in the United States. The company specializes in the repair of turbochargers of large reciprocating piston engines used in the oil and process industries, marine and power fields. Alco, Brown-Voberi, Clark, Cooper-Bessemer, Delavel, Elliott and other make large turbochargers and components are overhauled, repaired, rebuilt, balanced and returned to service — at a fraction of the cost of new replacements.

Turbine Specialties' exhibit at the Permian Basin Oil Show will include display of damaged and rebuilt turbocharger parts, rebuilt and new turbine blades of high qualilty alloys, various photographs and cut-aways. Technical personnel will man the booth to handle questions of interested visitors.

In addition to the main Salina, Kansas, plant, a new repair center has been opened in the New Orleans area at Harvey, La. Turbine Specialities/Gulf Coast Inc. has been patterned after the reputable operation of the Salina plant. Expertise, plant equipment, supervision and turbocharger repair specialists have been supplied by the Salina plant.

IMCO Services booth to feature 'follow the leader' computer game

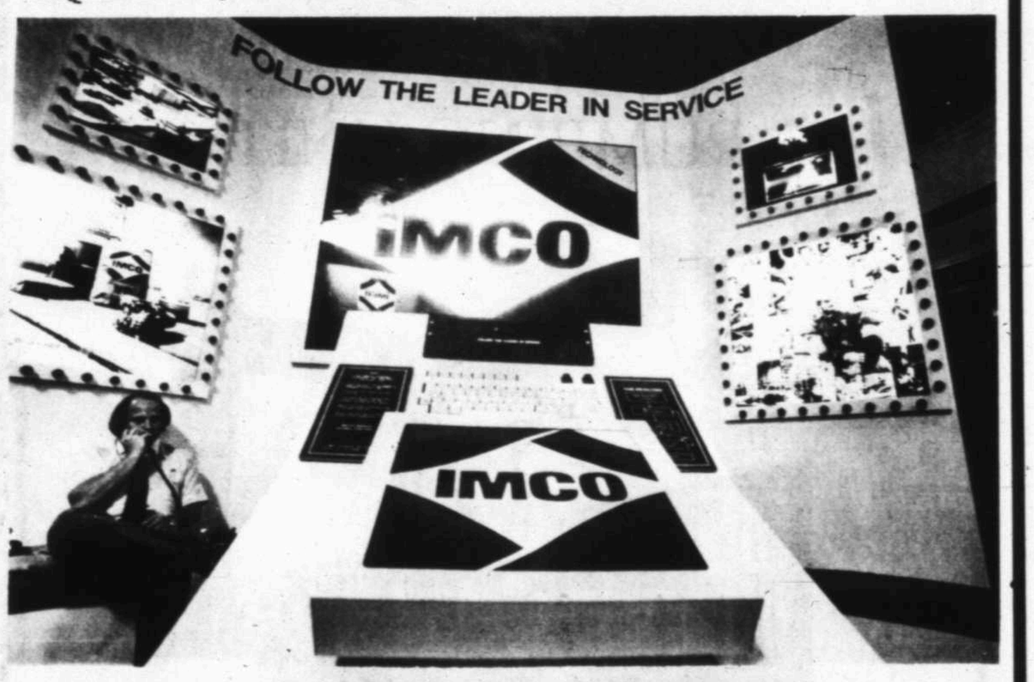
The IMCO Services exhibit at this year's Permian Basin Oil show will feature an innovative computer assisted game called, "Follow the Leader in Service."

The game board has IMCO's logo divided into four color segments mounted on a podium. Participants match wits with the computer by repeating programmed color sequence shown on the game board. Others can watch brightly colored lights surrounding a huge replica of the game board illuminate a panaromic view of IMCO's people, products, technology and distribution.

Along with the booth game, service through technology and training will be demonstrated with the award winning Drilmod (tm) and Bossmod calculator chips, plus the latest techniques in rheology and hydraulics analysis.

IMCO representatives will be on hand to answer questions. Literature on IMCO's products and services also will be available. Visit booth PH15 & 16.

IMCO Services, a division of Halliburton Co., headquartered in Houston, is an international supplier of drilling fluids, and related equipment and services to the petroleum drilling industry.



The IMCO Services booth at the Oil Show will feature this computer-assisted game called "Follow the Leader in Service," as a way to learn about the company's many services.

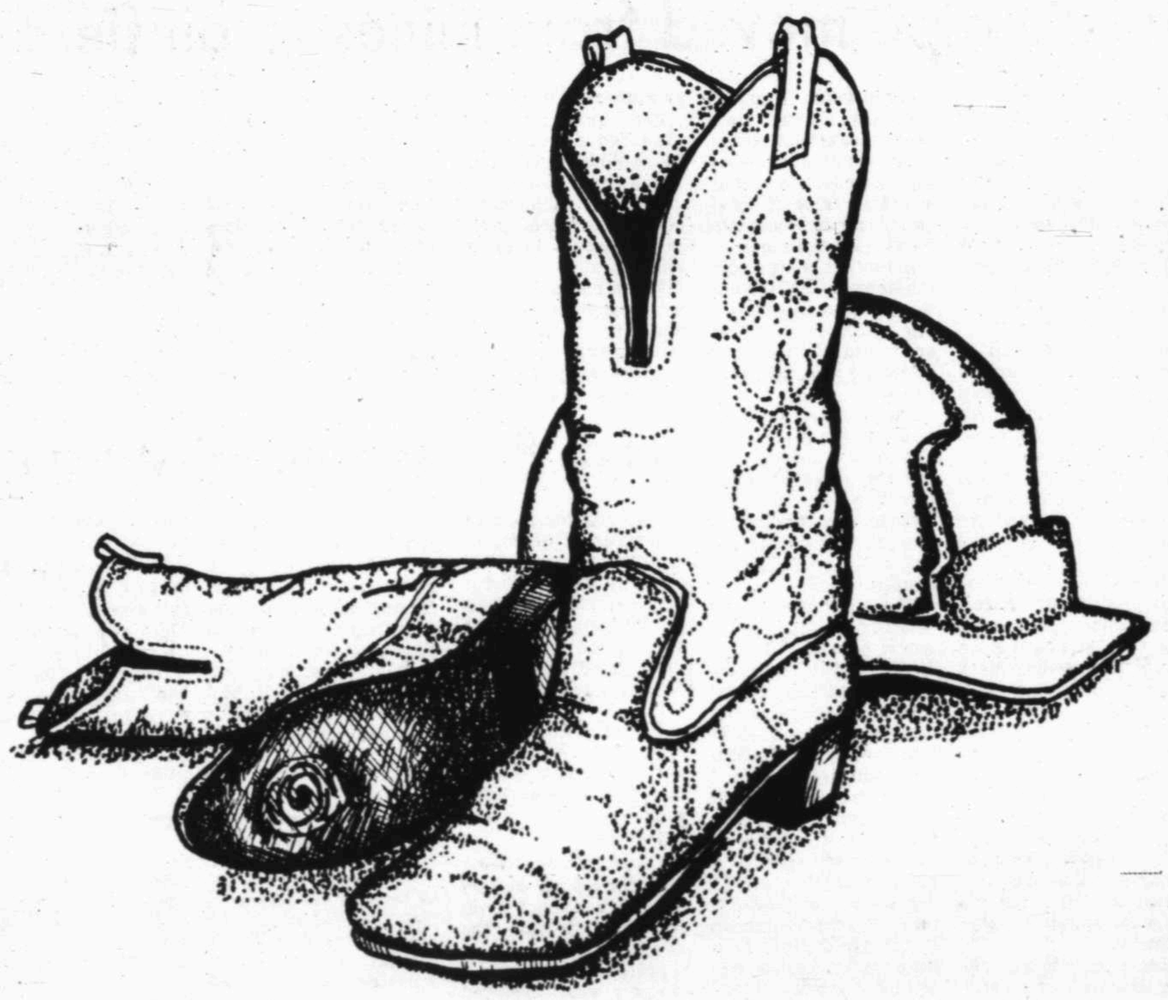
DOWELL IS PUTTING 50 YEARS OF EXPERIENCE TO WORK IN THE OIL FIELDS OF WEST TEXAS

With 10,000,000 Safe Work Hours



This year Dowell is celebrating our Golden Anniversary. For the last half century, our Dowell diamond has been the symbol for products, services and equipment designed to improve productivity in the oil field.

Along the way we've developed a reputation as our industry leader in stimulation, completion and workover services.

In fact, many of our customers have based their safety programs on procedures we integrate into every Dowell job.

We've been working with our customers for 50 years to develop safer, more efficient ways to be more productive. And we intend to keep it that way.

To find out how to put that experience to work in your operation, contact your local Dowell representative.

Visit us at the Permian Basin Oil Show, October 20-23.

Dresser-Atlas and Union Oil of California officials got together to commemorate the 50th anniversary of the wireline service company, on the site of the La Merced No. 17, the first well ever perforated by explosives and wireline. Left to right: Carroll Browning, president, Atlas Oilfield Services Group; Ray A. Burke, senior vice president, Union Oil; Harry E. Keegan, president, Union Oil and Gas Division; and Dean Hoffman, vice president marketing, AOSG.

Dresser celebrates 50th anniversary

1982 marks the Golden Anniversary of Dresser Atlas. Begun as Lane-Wells in March 1932, Dresser Atlas has evolved into a multi-national wireline logging company with more than 100 services offered at over 80 locations worldwide.

The first, ever, well to be perforated by explosive bullet guns operated by wireline was done by Lane-Wells on March 19, 1932, on the Union Oil of California's La Merced No. 17 in Montebello, California.

The success of this perforating gun and the advent of a new conductor cable with a wire rope core quickly set the Dresser Atlas progenitor apart from the other companies. And in 1934 the operations of Lane-Wells were expanded to the Gulf Coast.

These early days brought many hardships. Rolling stock was scarce even at the unheard of price of $700.00 for a 1932 Ford truck. Each truck had to range far and wide from each location in order to service the business. The truck on the Gulf Coast ranged South to the Mexican border, out to West Texas and East beyond New Orleans. The Oklahoma City truck ranged from Illinois to Montana.

This meant nights without sleep followed by days on the road. But this kind of dedication has been the hallmark of Dresser Atlas service over the ensuing half century.

1939 was a pivotal year in the life of the young Lane-Wells Company. More wells were being completed in cased holes and requirements for greater perforating accuracy were becoming increasingly important. And, the gamma ray log was born.

By January of 1941 Lane-Wells had perforated 30,000 wells for 2,800 oil companies and was on its way to becoming one of the world's largest wireline service companies.

Another milestone in Dresser Atlas' history was the merger of Lane-Wells with Dresser Industries on December 19, 1954. The merger had hardly had time to try its wings when it was hit by the recession of 1956. And, in 1958 Lane-Wells saw the handwriting on the wall and moved its operations out of Los Angeles to an obscure location "way out" on Westheimer Road in Houston, Texas.

July 1, 1968, Lane-Wells merged with the Pan Geo Atlas Corporation and Dresser Atlas, emerged as a totally integrated wireline service company.

C. M. Browning now heads this brugeoning Dresser Company which experienced a 575 percent increase in dollar earnings in the past five years.

Dresser Atlas, the modest little perforating company that began fifty years ago in Vernon, California, has come of age.

March 1932 — Bill Lane and Walt Wells prepare the first oil well ever perforated by bullet guns on the end of a wireline. Union Oil Company of California officials look on. The well was the La Merced No. 17 in Montebello, CA. The job marked the founding of Lane-Wells Company, known today as Dresser-Atlas, which is celebrating its 50th anniversary this year.

Committed to the Future of the Oil Industry

North American Royalties, Inc., a company committed to meeting present and future needs, including the need for domestic energy sources. A company committed to the future of the oil industry.

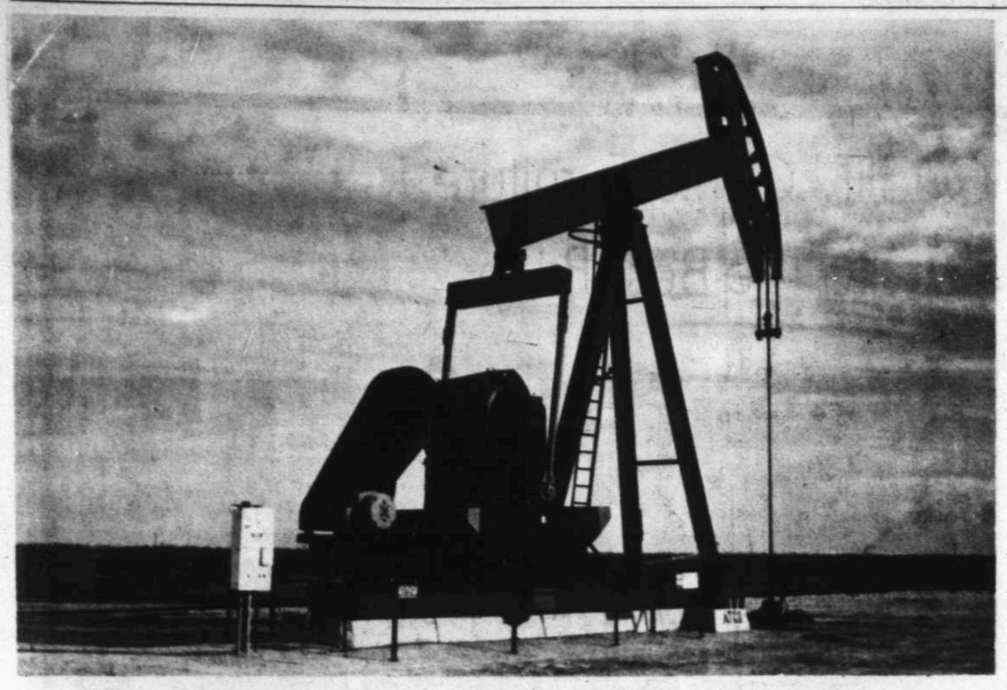
NAR carries on oil and gas exploration on the North American continent through four district offices, the largest of which is at the new location in Empire Plaza Building, Suite 850, in Midland. Headquartered in Chattanooga, Tenn., NAR's Oil and Gas Division is expanding its role in the industry.

NAR's modern foundries in Chattanooga meet other transportation and industries needs.

NAR: A story of commitment to the future.

NORTH AMERICAN ROYALTIES, INC.

Listed on the American and Pacific Coast Stock Exchanges (Symbol: NAR)



American Manufacturing Company of Texas has been producing equipment for the oil industry since 1924. The company maintains offices in six states and seven foreign countries.

AMCOT oil field equipment to be seen

American Manufacturing Company of Texas has produced high quality, long lasting oil field equipment since 1924. Today, it has offices in the following areas: Texas, Oklahoma, Louisiana, Colorado, Wyoming, California, Canada, Argentina, Colombia, Ecuador, Peru, Trinidad, Venezuela.

American Manufacturing Company of Texas, known for many years with the trademark of AMCOT to those we serve, is in a better position than ever to serve the world-wide oil producing industry.

AMCOT has quality herringbone gear reducers that have been in the field on various jobs for over 50 years.

Trico showing new well products

Trico Industries Inc. will feature several new products at the 1982 Permian Basin Oil Show: the Type "B" Mechanical Tubing Anchor/Catcher, the Thermo-Stabilizer, Log Correlation Collar and three styles of liner hangers.

The Type "B" Mechanical Tubing Anchor/Catcher prevents movement of the tubing during the pumping cycle thereby increasing pump efficiency and decreasing rod, tubing and casing wear. When set at the proper tension, the anchor/catcher will prevent the tubing and rods from falling if the tubing should part.

The Thermo-Stabilizer was recently developed for insulating steam injection lines from oil well casing. When injecting steam for enhanced recovery up to 30 percent of the heat is lost when the tubing comes into contact with the casing. Utilization of Trico's Thermo-Stabilizer can reduce this heat loss by as much as 95 percent.

With the widespread use of integral and flush joint casing it is becoming increasingly more difficult to locate datum points that are usually determined from the collar log. Trico is now manufacturing a tool to overcome this problem, the Log Correlation Collar (LCC). The LCC incorporates proven friction lock clamps allowing it to be secured around the casing at any point desired and run in the well without fear of being displaced. The LCC now provides the industry with a datum point that can be incorporated into the casing design.

Trico liner hangers come in three styles: Auto "J", Recipro-Set and Hydraulic-Set. All three have important quality features. The Auto "J" hangers set with standard left-hand release (right-hand release optional) while the Recipro-Set hangers allow rotation of the tubing string during cementing. The Hydraulic-Set hangers feature snubbing ports that set the slips smoothly to avoid potential damage. All Trico hangers and setting tools are modular, so last minute changes in the program can be accomplished with out loss of rig time.

Stop by the Trico booth for additional information on these new products. And while your're there, look into the other Trico products which include oil well completion equipment, bolted steel tanks, subsurface sucker rod pumps and accessories, oil well servicing tools, pump shop equipment and pumping units.

OIL MEN SAY:

Too much of the recent drilling spree was based on the fantasy that crude oil prices could climb forever. Now, too much of the inevitable correction is based on panic over the fact that the impossible didn't come true.

— editorial, Oil and Gas Journal, Oct. 11, 1982

Texas American Bankers --

Pulling Together To Serve You Better.

Commercial Lending Personnel: (Standing, left – right) Kris Kounce, Real Estate Secretary; Debbie White, Commercial Loan Secretary; Tom H. Stovell, Senior Vice President; W.H. Malone, Executive Vice President; Peggy Dillan, Commercial Loan Secretary; Bobbie Reynolds, Assistant Vice President & Mortgage Loan Officer; Liz Klingler, Mortgage Loan Secretary. (Seated, left – right) Donald W. Baer, Vice President; Susan Clark, Assistant Vice President – Credit Administration; J. Stephen Landy, Vice President; Lou Ann Duvall, Commercial Loan Secretary; and David J. Weir, Vice President.

And we're pulling for you. Our Lending Division has been greatly enlarged during the past year to provide commercial credit in Midland and the Permian Basin. We know the oil and gas business, and work closely with operators in financing equipment, production, and lease acquisitions.

We also know commercial real estate, corporate and personal cash management, tax investments, pension and profit sharing plans, to get the most out of your balance sheet.

Let a Texas American Banker pull for you.

Trailmaster exhibits full line of frac tanks and oil trailers

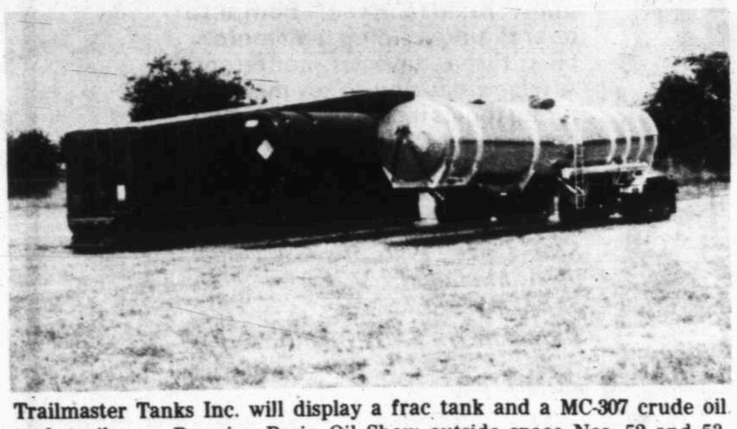
Trailmaster Tanks Inc. will display a frac tank and a MC-307 crude oil tank trailer on outside space numbers 52 and 53 at the Permian Basin Oil Show.

Trailmaster manufactures a full line of tank trailers and frac tanks for the petroleum industry. The tank trailer line includes gasoline, crude oil, vacuum, fresh and salt water, acid and truck tanks.

These tank trailers are constructed of steel, aluminum and stainless steel. Trailmaster custom designs the tank trailers to various shapes and sizes, including insulated tank trailers.

Trailmaster Tanks Inc. operates under the premise of offering the highest quality tank trailer available and at competitive prices. Trailmaster's plant, located in Fort Worth, Texas, has a conventional custom tank facility as well as an assembly line operation to ensure quick delivery. The Trailmaster's staff of qualified engineers enables Trailmaster to design tank trailers to exact customer specifications.

Trailmaster Tanks Inc. is a family owned and managed business founded in 1968 by Edward L. Harvey Sr. Prior to 1968, he was for over 20 years associated with Gorbett Bros. Tank Manufacturing Co. Inc.



Trailmaster Tanks Inc. will display a frac tank and a MC-307 crude oil tank trailer on Permian Basin Oil Show outside space Nos. 52 and 53. The company manufactures a full line of tank trailers and frac tanks.

Bender and Company booth features business publications

Tax and general business reference material, written especially for the oil and gas industry, will be featured at the Matthew Bender and Company's Permian Basin Oil Show exhibit.

Dick LeClaire, regional sales representative, El Paso, will be available to explain the many Matthew Bender publications and to answer questions.

"Bender publications are written for a wide variety of oil and gas personnel; company presidents, attorneys, landmen, tax managers, and geologists," LeClaire said.

"We have created libraries designed to give each of these executives security in seeking up-to-date information and to provide a savings in time and money," he added.

"Because of the loose-leaf format of our books, we are able to keep the customer updated throughout the year on changes that have occurred on the state and federal levels," LeClaire pointed out.

Matthew Bender and Company is currently celebrating its 95th anniversary. Since 1887 the company has published quality reference material.

The company is headquartered in New York and maintains editorial offices in California, New York and Washington, D.C.

"Besides oil and gas titles," LeClaire said, "Bender offers excellent reference material on securities offerings, government compliance, debtor-creditor rights under bankruptcy, and international operations.

"We are proud to be a part of the Permian Basin Show and I hope everyone will visit our display and review our publications with Dick LeClaire," Bob Connor, Matthew Bender national field sales manager, commented.

Those unable to attend the show can obtain a Matthew Bender catalog by contacting Dick LeClaire at (915) 821-1879.

Reed displays 'ultimate' joint

Reed Tubular Products Company will display the ultimate premium-thread connection, the RTS Two-Step; its new hydrogen-sulfide-resistant tool joint, and its standard tool joint that has made Reed a leader in the drilling industry for more than five decades. Information will also be available to explain pipe inspections.

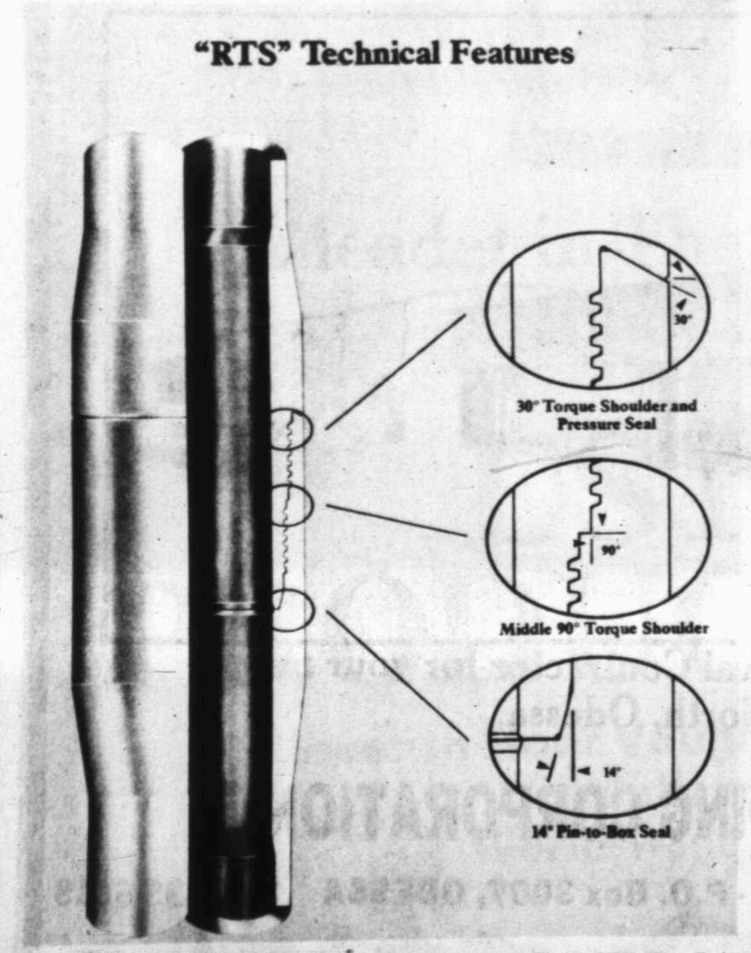
Reed has led the industry in tool joint development since it first introduced the Reed Full-Hole joint in 1926. And as a matter of fact, Reed disigned and developed every API-approved joint now in common use.

Recently Reed introduced the RTS Two-Step series, the state-of-the-art premium-thread connection. The thread provides precise alignment of the thread start and stop points as well as two-step, non-tapered, metal-to-metal sealing. These features mean greater integrity, better sealing and less danger of cross threading during critical downhole applications of tubular products.

Test specimens and technical papers will also be available at the booth to explain why, especially in deep-hole, sour-gas wells, companies should specify Reed's new hydrogen-sulfide-resistant tool joint. The premium tool joint is the first in the industry designed specifically for use in hydrogen-sulfide environments. Used in conjunction with other precautionary measures such as ph control, scavengers, overbalance control, oil base muds, etc., the new H2S-R tool joint will insure the highest level of safety for sour-gas drilling by providing resistance to sulfide stress cracking.

The tool joint that established Reed's reputation for reliability 56 years ago will be displayed with the hard metal banding.

Information pertaining to the pipe inspection service and Electro-Magnetic Inspection (EMI) unit will also be available. The unit's applications will be highlighted to show the four separate inspection services it performs: Transverse-defect inspection, longitudinal-defect inspection, wall-thickness measurement and grade uniformity checks. To see the display and talk with the engineers and designers whose designs influence the industry, visit booth No. G-106/7/8.



This illustration of the Reed Tubular Products' Reed RTS Two-Step shows the advantages of using the premium thread connection. At its Oil Show Booth, Reed will also have information available explaining pipe inspections.

The tong man is a crucial member of the rig crew team, especially when the crew is making a connection. This hand was doing his job on Sharp Drilling's Rig 47 on a well near Midland.

Mobile inspection system shown

Details of AMF Tuboscope's new generation of mobile pipe inspection equipment, the Amalog IV-B system, will be covered at this year's Permian Basin Oil show display.

Solid-state detectors (transducers) of an advanced tuboscope design make the new system more sensitive to flaws or damage in pipe. Computer circuits read and interpret the inspection data, displaying results on a CRT screen and printing reports on defective pipe.

The sensitivity of the new detectors and the computerization allow high-speed inspection. They also sharply narrow the range of doubt about pipe condition.

The new equipment is built with hydraulic pinch rolls for centering pipe and propelling it smoothly through the inspection units. It is also fitted with computer-triggered paint spray systems that mark the location of flaws on the pipe, expediting prove-up and helping eliminate chances of operator error.

The new Amalog IV-B system will inspect new casing up to 10 3/4 inches. Two other stationary inspection systems are currently being installed in Tuboscope All Weather Inspection Centers in the U. S. and Canada; the Amalog 416-P for pipe from 4-1/2 to 16 inches OD; and the Amalog II-B for tubing up to 5 inches OD.

Details on the new inspection system will be available at the AMF Tuboscope booth, PJ34 and 35.

Sioux puts pressure on dirt

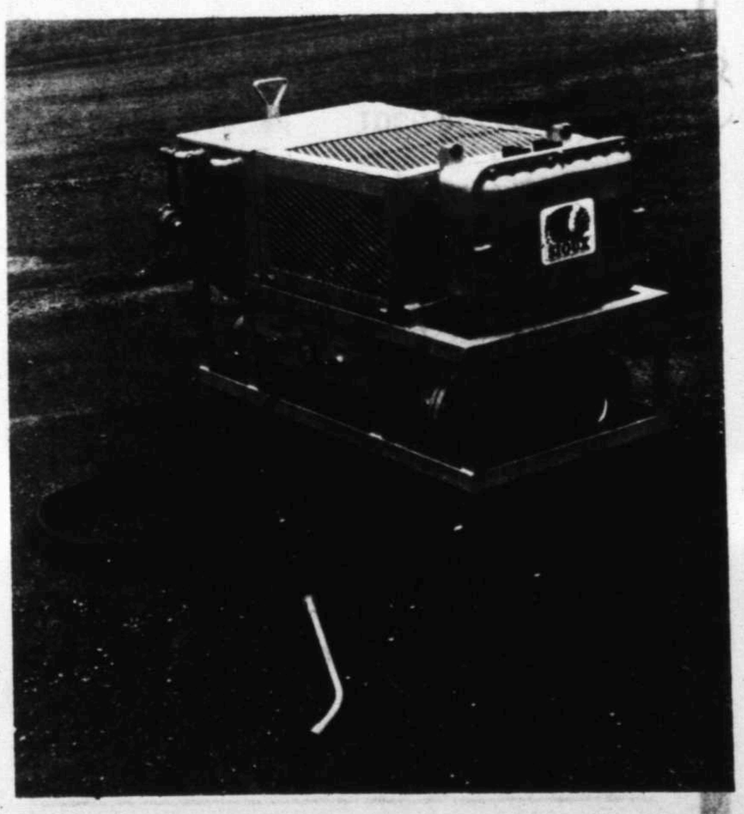
Sioux has manufactured heavy-duty industrial pressure cleaning equipment since 1939 and, at the Permian Basin Oil Show, will exhibit combination cleaners in both the conventional design and the special explosion-proof equipment for hazardous area applications.

Whatever the cleaning need, the company offers over 200 standards models and 32 explosion-proof steam cleaner/high pressure washer combinations in stationary and portable designs.

In addition, 30 models of remote, self-contained modules feature portable construction with water and chemical reserve tanks, generating systems, hose reels and 100 feet of hose allow versatile cleaning applications throughout the oil industry.

With pressures available to 10,000 PSI equipment will handle difficult cleaning applications, whereas steam at 325 degree F will remove hazardous oils and greases most effectively.

Visit Booth D-57-58 in Building E at the Oil Show to register for your engineering portfolio which can be forwarded immediately from the factory.



In Beresford, South Dakota, Sioux Steam Cleaner Corp. has manufactured heavy-duty industrial pressure cleaning equipment since 1939. See the company's products at Booths D57-58 at the Oil Show.

'All those holes in the ground' mean work for service firm

There isn't a whole lot to see in West Texas and southeastern New Mexico. Just short grass plains, mesquite thickets, cactus and sand. They don't make many picture post cards of it. It's what's below the surface that's attracted the attention of modern man.

Out here you can punch a hole somwhere between 300 and 30,000 feet deep, and the chances are reasonably good — if you've done your home work — you'll strike oil or natural gas. Much of it is locked in rocks laid down 230 million years ago, when a broad shallow sea filled what we call today the Permian Basin.

Since the first oil discoveries 60 years ago the Permian Basin has developed into one of the world's greatest oil and gas producing provinces. Approximately one-fifth of all oil and gas produced in the United States comes from here. Roughly one-seventh of the nation's producing wells are here.

"That's the one good thing about working out here in West Texas," said Wade Alexander. "We've got more holes in the ground."

Alexander, southwest region sales manager for the Western Company of North America, in Midland, has good reason to be glad for all the holes in the ground. His business — like all the rest of the petroleum industry today — is experiencing a slowdown. But all those holes mean there will always be some work to do and income to be earned, no matter how bad things get.

Western Company provides oil and gas producers services needed to drill and complete oil and gas wells. When business is good for the producer, it's good for Western Company. When the producers start pulling in their horns, Western Company — and the competition — starts tightening its belt.

Western Company has been coping with the crunch by laying off hands, and mothballing equipment.

There's been a good side to the cut back, explained Max Goff, Western Company vice president, and southwest region manager.

"In reducing personnel we probably have increased the overall quality of the workforce — because you know who you get rid of first. We feel we're going to come out of this thing with a better trained, higher quality workforce."

Around the first of the year, at the height of the late, lamented boom, more than 1,000 people worked for Western Company in the southwest region. Today only a litte more than 800 are listed on the roster.

Most of those laid off have been lower-level, hourly employees. Fewer in the upper levels were laid off, Goff said. Instead adjustments were made by "breaking people back to lower job grades."

The reductions in grade have been good for Western Company's employees — they're still working and earning at a time when many are unempolyed — and good for the company because its best trained, best qualified people are still on the job.

That's important to Western Company, because it has a lot invested in its employees.

"There is a very high priority on training in Western Company," Goff said.

Whether the employee is a salaried college graduate working in a technical field, or an equipment operator paid an hourly wage, "for all of them, they have to go to school," Goff said.

To school its employees, Western Company has established a $7 million training center at Fort Worth, known as the Western Center for Technology, or Western Tech. It's like a small college, with classrooms, dorms and places to eat. Going to school there "is just like being on a campus," Goff said.

Training is essential to Western Company operations, which has adopted the nickname "Pacesetters."

"We're on the edge of technology," Alexander said, "very close to changing the oilfield.

"I'll tell you what," he said, "in the last five years, the changes in technology have just been fantastic. The last decade has been a real fight just to stay abreast, and initiate new technology.

"Well stimulation technology has truly changed from the early '70s until today," he said.

"As far as the stimulation of oil and gas goes, we have gone from essentially using lease oil and gelled salt water to high temperature cross-linked gels for water and oil. They carry a lot more sand and effectively treat a lot more wells."

The changes in well stimulation technology have had a significant effect on Western Company. Company-wide, well stimulation is 70 percent of its business. Well stimulation is the biggest part of the business in the southwestern region.

It's the more than 100,000 existing holes in the Permian Basin that are generating much of the business for Western Company today.

"The percentage of remedial workovers has increased in a real sense with the slowdown in drilling activity," Alexander said.

"Our remedial work, compared to what it was during the boom, has almost doubled."

There are a couple of reasons for the increase in remedial work, Alexander said. First, during the boom, oilmen were too busy drilling new wells to take time out to workover old ones. The second reason is money spent on a workover can be recovered more quickly than money spent on a new hole, making workover economically attractive today.

Independent oilmen are creating much of the market for workovers, Alexander said. "When and independent is drilling a well, he usually has investors to share the cost." (Independents have shied away from drilling, because investment money is hard to come by today.) On the other hand, the cost of a workover "comes right out of the hip pocket of the independent." As a result, independents are looking for a quick return on an investment.

Typically, Alexander said, oilmen figure money spent on workovers must be paid back by increased production within 90 days, or a well isn't a good candidate for remedial work.

Using today's well stimulation technology, oilmen can, in effect, remodel an old well.

For example, Alexander explained fracturing technology 10 years ago might have only lightly fractured the producing formation, leading to only a relatively small increase in yield over that from unfractured rock. With today's techniques, the manmade fracture can be forced further into the producing strata, allowing a greater quantity of oil to flow into the well bore. In such a case, the investment in remedial work using the latest technology can be very worthwhile.

• • •

The Western Company of North America has grown along with the Permian Basin oilfields. Founded in 1939 in the small West Texas town of Seagraves, the company has played a key role in the development of the region.

Western Company is the creation of Eddie Chiles and Robert Wood. In the beginning the company was a "mom and pop" affair operating a single acid pump. Service was gradually expanded into the West Texas and southeastern New Mexico region. Western Company's acidizing service provided oilmen a means of stimulating production of wells completed in the low permiability carbonate and dolomitic rocks common in the Permian Basin.

Chiles and Wood also fostered Frontier Chemical Company of Denver City, Texas. Wood bought Chiles' share of Frontier, and left Western Company, coming to Midland in 1941. Here Wood has played a leading role in the development of the community.

Since the two parted, Chiles has lead Western Company to a position of prominence in the petroleum industry. The company today is a reflection of his dynamic personality. Chiles is perhaps best know to mainstream America as the owner of the Texas Rangers baseball team. Chiles has won recognition througout oil country with his "I'm mad" broadcast commercials, through which he made his thoughts on matters of politics and economics perfectly clear to his listeners.

During the '50s Western Company expanded operations into the Texas Panhandle, Oklahoma and Kansas markets. During the middle '50s the Spraberry Trend boom hit the Permian Basin. To better help oilmen exploit the Spraberry, Western Company added hydraulic fracturing to its bag of tricks.

During the '60s, Western Company established a cementing division.

The company grew rapidly following the Arab oil embargo. Revenues climbed from $40 million in 1973 to $561 million in 1981.

Today, Western Company of North America operates worldwide through two operating branches — Western Petroleum Services, serving the onshore market throughout the United States; and Western Oceanic Inc., which operates jack-up and semi-submersible drilling rigs at sea, providing offshore drilling services.

• • •

Acidizing and hydraulic fracturing, or "fracing," are two common and proven well stimulation techniques. Either may be used to increase the production of oil or gas wells.

Frequently, when the situation warrants, oilmen incorporate acidizing and fracing into new well completion procedures. They may chose not to acidize or frac, and a well is then said to be completed "natural."

Acidizing and fracing are quite frequently used during workovers, when producing wells are cleaned out and, just like surface property, remodeled, in an attempt to increase production.

Acidizing is the process of pumping dilute acids into a well bore, where it is forced under great pressure into the tiny oil or gas-containing pores of the producing formation. Back in the formation, the acid eats away at the rock, enlarging pathways through which oil or gas flow into the well bore, permitting the hydrocarbons to move at a greater rate.

Acidizing is used to treat carbonate formations — the limestones and dolomites. You can get some idea of how the technique works by dropping a small lump of ordinary limestone into a container of vinegar. The bubbly reaction is precisely the same as the one occurring deep in the ground when an oil or gas well is acidized.

Fracing is the process of forcing a solution of fluids and fine grained solids, or propants, down a well bore and out into a producing formation, where it acts as a wedge; forcing naturally occurring cracks in the strata to open wider, and then holding them open, permitting more oil or gas to flow into the well bore.

The fracing mixture is moved by pressures typically reaching 10,000 psi, or more. The operation may last for hours.

When fracing first came into use, the most commonly used frac fluids were lease oil and salt water. Sand was the common propant. Today chemical additives are mixed with oil and water to make them gel, which allows more solids to be blended into the frac solution. Bauxite and other solids may be blended in the slurry. The thicker, modern solutions do a better job of shattering producing formations than the older, thinner solutions could do.

Cudd Pressure Control strives for quality service

A service company, to be successful in today's competitive market, must give the operator the best service for the dollar, and provide the services vital to the oilfield.

Cudd Pressure Control Inc., a specialized company, offers a select group of well services and well control techniques indispensable to the petroleum drilling and producing industry.

Cudd's combination of services in hydraulic and rig assistant snubbing, coiled tubing, nitrogen, wireline and well control each offer many individual applications in remedial, workover, completion or production enhancement procedures.

From handling certain problems encountered while drilling into high-pressure formations, to performing completions or workovers under pressure or in fluid-sensitive zones by testing and evaluating reservoir potential, through enhancing production using foam stimulation or fracturing; from preventing blowouts to saving a well after one occurs, all Cudd service lines feature unique well service techniques and procedures.

Today, operators are not only looking for reduced risks and more cost effective service, but becoming increasingly concerned with protecting sensitive, petroleum-producing formations easily damaged by most fluids including kill or frac fluids.

Cudd's special emphasis on "live-well" servicing means most jobs can be performed under pressure without killing the well, thus saving kill fluid expense, lost production time, costly clean-ups, re-stimulation and possible formation damage.

Our well control capabilities, generally associated with emergencies or spectacular wild wells, are uniquely indigenous to almost every service line Cudd offers, and require the special skills and experience of our Strike-Team service professionals to prevent common oilfield occurrences from becoming major oilfield disasters in terms of lost production, economics or even total destruction of a well.

In-house safety training and continuing education classes give our sales and service professionals the ability to diagnose a well problem, recommend one or more corrective service applications, and then perform the procedure in the most economical way to preserve and enhance production capabilities.

Cudd Pressure Control has initiated a nitrogen applications school, a production flow test school, plus a U.S.G.S. certified well control school as expanded services to the drilling and producing industry.

Unlike conventional workover and well service techniques which require killing a high-pressure well before any downhole work can be initiated, Cudd's specialized snubbing equipment normally enables the work to be completed without kill fluids.

Hydraulic and rig-assist snubbing units are designed to handle most high-pressure or heavy hook-load assignments to 15,000 psi or more.

To handle various downhole fluids and displacement procedures, Cudd Pressure Control offers the latest in economic fluid circulation or displacement services. Through the use of coiled tubing units and nitrogen pumps, tankers, and fluid pumps, Cudd performs low-cost, yet effective displacement, circulation, clean-out and other related downhole operations.

For many well-service applications requiring nitrogen, the job is handled from beginning to end through the use of Cudd Pressure Control's coiled tubing or snubbing units. Nitrogen can be used to generate foam for numerous oilfield applications where lost circulation, hydrostatic pressure and water-sensitive formation damage must be reduced to a minimum. The benefit of foam applications for downhole remedial, completion or stimulation procedures is a fast, safe, more efficient and thus less costly technique.

For more information on the true economics of "live-well" completions, stimulations, workovers, and well servicing, contact your Cudd professional in Odessa and get the facts you can count on. Call 335-9677 or 333-4873 and come by our exhibit at the 1982 Permian Basin Oil Show, booth J-28.

OIL FACTS

Depending on the geology of a given oil field, the recovery factor using conventional production technology ranges from 10 percent to 70 percent of what's in the ground. The average is estimated at 30 percent, says National Supply Company.

Fight over 'old gas' could be someone's Waterloo

By WILLIAM GARLAND

From Our Washington Bureau

WASHINGTON, Oct. 8 - The Waterloo of natural gas battles in the coming 98th Congress may well center on so-called "old gas," estimated to be 35 to 40 percent of all gas produced in the United States.

But the question is: Waterloo for whom? For natural gas producers who have strived since 1954 to get controls off their production? Or for utilities, interstate pipeline companies and consumers who believe that controls, particularly on that category of gas, will hold down their respective prices?

If, as many lobbyists and congressmen predict, 1983 is indeed the year to resolve the controversies on natural gas, the battle next year could prove decisive.

George H. Lawrence, president of the American Gas Association, which represents the utilities and pipelines, said his powerful organization would not fight with producers over the decontrol of "new gas," defined in the complicated Natural Gas Policy Act of 1978 as gas discovered after April 20, 1977.

But "that leaves you with the most contentious issue," said Lawrence. "What do you do with old gas? Everybody has their own pet view on that. The trick is going to be to find what can be acceptable."

The "pet view" of his association is that controls on old gas should remain.

Lawrence disagrees with gas producers who say the higher prices for old gas could stimulate the industry to discover more gas.

Producers also have said they now must "shut in" some gas production in NGPA-defined old reservoirs because the cost of production is more than the value of the gas.

Lawrence's view goes this way: Producers will have plenty of cash to meet the high cost of exploration because of higher market prices for new gas, which currently is held under controls that phase out before being lifted on Jan. 1, 1985.

Although the AGA traditionally has fought decontrols, Lawrence seemed flexibile.

"You just can't rule out a solution to that problem (on old gas prices) because it's too much in all of our interests to achieve it," he said. "We're not locked into concrete on what you do on old gas."

Lawrence foresees a comprehensive 1983 natural gas bill that will address natural gas contract problems and industry difficulties with the Fuel Use Act. That act restricts the use of gas in new industrial plants, and Lawrence said the industry hopes to significantly alter the limitations.

A compromise on pricing for old gas would be part of an overall natural gas bill, he predicted.

"One of the first steps would be to convince the administration (on) that type of compromise," he said. "They're sort of waiting for the industry to see what they can sort out."

In August, Lawrence testified on the broad issue of the NGPA before the House Subcommittee on Fossil and Synthetic Fuels. He called "indefinite escalator clauses" in natural gas contracts "the single biggest problem confronting the gas industry."

Among other factors, the indefinite escalator clause often drives up the price of natural gas beyond the market price. And when contracts also have a so-called "take or pay" provision, the pipeline is locked into buying the gas.

"Take or pay" provisions in combination with indefinite escalator clauses or other contract provisions force the utilities to pass through higher costs for gas to consumers.

Although congressmen and the 200-plus-member Northeast-Midwest Congressional Coalition have called for dealing with the "take or pay" contract problem in the expected special session of Congress, Lawrence predicted there would be no action until the next session because of time constraints.

Cooper's Ajax compressors to be seen at oil show

Reliable, heavy-duty Ajax integral gas engine-compressors are built to withstand the most rigorous operating condition, says distributor Cooper Energy Services.

They are conservatively designed for high mechanical efficiency, good balance, low operating cost and minimal maintenance requirements. All units feature Ajax Economizer gas injection for fuel savings of 30 to 35 percent.

Ajax integrals are self-contained and portable. Installation requires only hook-up of suction, discharge and exhaust lines. A marine package is available for offshore installations.

A complete line of compressor cylinders is available to match specific application requirements. Most sizes are carried in stock.

Engine sizes range from 30 to 600 horsepower (23 to 450 KW) with one, two, or three power cylinders. Single-and two-stage machines with compression ratios of 6:1 and 36:1, respectively, are standard. Three-stage, higher pressure units are also available.

Other special features of Ajax integral compressors include:

High Reliability Ignition System: Permanently timed breakerless ignition system; optional systems available.

Automatic Lubricator: Force-feed lubrication to power and compressor cylinders, automatic fill valve, oil level gauge, and low-level shutdown.

Heavy-Duty Governor: For constant speed operation, pneumatic operator available for speed and capacity control.

Crosshead Construction: Crosshead guide absorbs thrust vectors, seal crankcase, and precludes contamination of crankcase lubricating oil with products of combustion.

Air Filters: Oversize design allows extra-long service in difficult atmospheres.

Thermo-Syphon Cooling: Temperature automatically adjusts to optimum level; system complete with temperature gauge and shutdown control.

Electronic Instrumentation: With full complement of shutdowns; pneumatic panels optional.

Vertical Discharge Unitized Cooler: Complete with surge tank and water shutoff valves; other types of cooling available.

Closed-Die Forged Components: Balanced crankshaft and connecting rods are forged from high-alloy steel in precision dies.

Tapered Roller Bearings: Double-row, sized for twice required load carrying ability.

Unitized Frame: Cast semi-steel frame, heavy engine-type ribbing.

High Rod Load Capability: Hardened alloy steel piston rod for extremely high rod load/bhp ratio and a wide range of pressure conditions.

Estra-Length Distance Piece: Designed for ease of packing maintenance; equipped with Lucite cover for visual inspection.

Piston Rod Packing: Segmented with a selection of different rings, depending on specific application requirements.

Oversized Surge Bottles: Extra-large to minimize peak-to-peak pulsations.

Matched Separators: Equipped with mist extractor element, automatic dump trap, liquid level shutdown, manual drain and relief valve as required.

Compressor Cylinders: Advanced design with extremely high working pressure per bhp ratio; special high-alloy cast iron, ductile iron and forged steel cylinders available.

High Adiabatic Efficiency: Achieved through low valve velocities, streamlined gas passages and large water jackets.

Clearance Adjustment: Wrench-operated variable volume clearance plugs or wheel-handle-operated variable volume clearance pockets are standard.

Compressor Valves: Heavy-duty for long life and minimum valve velocity.

Streamlined Gas Flows: Large special-shape gas passages ensure minimum pressure drop.

Oversized Flywheel: For minimum speed variation and exceptionally low coefficient of fluctuation.

Thousands of Ajax two-cycle horizontal gas engines are in service powering oil field beam pumping units and driving waterflood pumps whree fuel gas is available.

Operating cost of Ajax engines is generally much less than that of electrically powered units.

Ajax engines are conservatively designed for ruggedness, long life and dependability. All Ajax engines are equipped with Altronic solid-state ignition for easy starting. Fuel gas injection systems offer low Btu consumption comparable to the most efficient four-cycle engines on the market.

Some specific features of Ajax engines include:

Controlled Lubrication: System includes a combination of splash to crankshaft, gears and crosshead, and a mechanical feed to cylinder wall.

Thermo-Syphon Cooling: The thermo-syphon circulation system used to cool the engine jackets eliminates a water pump and increases efficiency as temperature automatically adjusts to optimum level.

Automatic Starting Valves: On all units for starting with 200 psi air or gas. Electric starting is optional on all units through the DP-60.

Tapered Roller Bearings: Provide maximum bearing life; heavy duty, double-row, factory-adjusted to maintain perfect alignment.

High pressure plunger pumps by Ajax are designed specifically for continuous, heavy-duty oil field service including waterflood injection, salt water disposal, subsurvace hydraulic pumping and offshore oil transfer systems. All Ajax pumps are available with a broad range of fluid-end materials, plunger sizes and packaging arrangements.

Ajax vertical pumps provide maximum durability, operationsl safety, and optimum use of floor or platform space. They are generally regarded as the best available pumps for low maintenance cost and minimum downtime in the toughest applications. Pumps can be equipped for either engine or electric motor drive. Ajax engines are matched to pump ratios and speeds.

In the Oil Show booth E42, Custom Safety Products Inc., of Friendswood, Texas, will display what oil field hands have come to call the "The Lifesaver," the Safety Pad II, developed in recent years to provide greater rig floor traction and safety under all conditions.

Nonslip rig floor surface shown

The safety director of a large drilling contractor made the challenge: "Invent a product that will prevent slip-fall injuries around the rotary table, under all conditions, including oil-base mud, and you have reinvented the wheel."

Roy Phillips heard that challenge in 1978. The safety director was saying that the art of "making hole", regardless of science and machines, still depends on the skills of the men on the floor. This floor (the working surface) can be so slippery that maintaining your balance is an art in itself, and maintaining maximum efficiency while making connections is next to impossible.

For years, in an attempt to combat this slippery condition, brushmats, roofing paper, sand, welded down tong dies, angle iron, etc. have been used as a standard. Their help in preventing slip-fall injuries was always marginal and with the introduction of oil-base muds, it became obvious a higher traction working surface was a must.

Phillips, an engineer with several patented items behind him, and Choice Kinchen, president of Custom Ad, formed Custom Safety Products with several ideas on how to solve the slip-fall problem.

In May 1979, after seven months testing on a workover rig, the "Safety Pad" was made available to the Oil Patch.

By October 1980, 70 rigs were using the Pad and a design change was made adding metal studs to its surface which made it look somewhat like a snow tire. Now called "Safety Pad II", sales climbed 300 percent in 1981 while the small plant in Friendwood, Texas, doubled in size to keep pace with the demand.

Surveys reveal that "Safety Pad II" has reduced slip-fall injuries 99 percent. In addition, this sure-footed surface reduced related injuries 50 percent to 80 percent. These related injuries were being caused by tongs, pipe, chains, slips, elevators, being caught in-between or hit by objects, fatigue, and over-exertion.

"Safety Pad II" is a flexible mat, custom molded to fit the rotary table or entire rig floor. Other areas it can be used are the monkey board, drillers console, dog house, and steps. Molded from a high-strength, abrasion and tear resistant urethane, it is highly chemical resistant molded with steel studs for the necessary traction.

Grooves are molded in for fluid drainage and to give additional leverage when working with the tongs. Contractor names and rig numbers are molded into the surface for traceability and warranty.

How long will it last is unknown at this time for the first pads installed in early 1979 are still working hard in the tropics, in the States, the North Slope and the North Sea. Pennies a day are providing the traction needed to make the fastest and safest trips in the oil patch.

Roy and Choice knew their goals had been met when the hands began referring to "Safety Pad II" as "The Lifesaver".

The "Lifesaver", or "The Safety Pad II" can be seen in Booth number E42.

For additional information contact Roy or Choice at Custom Safety Products, P. O. Box 833, Friendswood, Texas 77546. Area Code (713) 482-8668.

Department of Energy still alive; However, it's not doing very well

By VIC OSTROWIDZKI
Hearst Washington Bureau

WASHINGTON — The Department of Energy, marked for extinction by President Reagan 18 months ago, is still alive and kicking and continues to get in trouble.

The latest blast at the agency was leveled by the General Accounting Office (GAO) which concluded that lack of management practices has made the agency vulnerable to fraud, waste and abuse.

The congressional investigative agency, which sent 65 auditors to check the agency's books, found "significant control problems" at DOE headquarters and each of the four field offices it reviewed.

"Because of these weaknesses, we could not assure ourselves of the reliability of the data produced by the department's accounting system," the report said.

The report was especially critical of the agency's $1 billion property management activities.

Some federal officials place part of the blame for the agency's problems on the fact that since it is slated for extinction and its secretary, James Edwards, has announced long ago he is leaving, most employees have been left pretty much on their own.

"Secretary Edwards hasn't been an inspiring leader," an aide said.

The administration is currently searching for a replacement for Edwards to administer the agency responsible for a $23 billion budget.

The administration introduced a plan to abolish the agency last December, but there has been little progress made to get the plan enacted in Congress.

Two Senate committees held four hearings between June and September on the Reagan proposal to abolish the agency by transferring nearly 80 percent of it to the Commerce Department and the rest to Interior, Justice and Agriculture. No bill has been reported out.

There has been even less interest expressed in the bill on the House side.

House Speaker Tip O'Neill has said he feels the bill is "purely political".

Proud to serve the oil industry in the Permian Basin

Before end of 1980s oil crisis could hit U.S.

By VIC OSTROWIDZKI
Hearst
Washington Bureau

WASHINGTON — A major oil crisis — far more serious and more painful than the two already experienced — is highly likely to test the U.S. "on a scale matched only in this century by that of the Great Depression" before the end of the 1980's, one study contends.

This doomsday scenario is contained in a new major study, "Global Insecurity" that is critical of the Reagan administration for an energy policy based "upon complacency and inattention" which could prove very costly.

The new study, a culmination of efforts by several energy scholars, maintains that the two oil crises — of 1973-74 and 1979-80 — have already had a devastating effect on the world economy, costing Western nations $1.2 trillion in lost economic growth.

The book, edited by Daniel Yergin and Robert Stobaugh, holds the two oil crises "ended the era of high growth and full employment."

"America's new oil bill is $80 billion a year," says Yergin, co-author of the best-selling Harvard Business School's "Energy Future." "We are paying for it through higher unemployment."

The study predicts the next crisis will be more painful than previous ones because energy now commands a much larger share of the gross national product and because an increasing share of world oil exports may be concentrated in the highly unstable Persian Gulf by the end of the 1980s than is the case today.

The book contends the U.S. is unprepared for another energy emergency and that "merely repeating words like 'glut' and 'market' as if they were some mantra will not prove sufficient".

"Glut can turn to shortfall on little more than an assassin's bullet, and the orderly and reasonable functioning of markets can be brutally overwhelmed by an upheaval and by the sudden panic of the unprepared," the book suggests.

The study contends that the U.S. has not realized as effectively as have Western Europe and Japan the strong relationship between high energy prices and inflation and unemployment.

"American leaders and analysts have gone into very considerable intellectual acrobatics to deny this obvious reality, with the result that a considerable part of recent economic debate has been strangely irrelevent," the authors hold.

The study warns that the goal of full employment has been forsaken both here and in Europe where unemployment, which averaged 2.8 percent between 1966 and 1973, reached 9 percent last spring. American unemployment, meanwhile, is hovering around 10 percent.

"Global Insecurity" criticizes the Reagan administration for not stressing a "prudent, diversified energy policy aimed at minimizing a broad range of risks."

The study emphasizes energy conservation as an important element in the adjustment to an era of less abundant and secure energy supplies.

It includes in its list of major obstacles in this adjustment process the volatility in energy demand, the rising tide of trade protectionism, a general tendency in the U.S. toward short-term investment and an oil pricing pattern of "jagged peaks and sloping plateaus" which discourages investment and consistent policies as well as long-range planning.

One scenario for the future of world energy supplies developed in the book assumes a pattern similar to world events occuring between 1973 and 1980.

The authors estimate as much as a 40 percent decline from current levels of U.S. oil production might occur if dramatic political upheavals had adverse effects on OPEC production, while environmental problems, political opposition and capital constraints would impede energy production in the industrialized nations.

OPEC prices, under these conditions, might rise beyond $70 a barrel, a stunning increase. As of Sept. 1, the average OPEC price for crude oil was $33.56 a barrel; average price for U.S. crude oil as of May was $27.67.

The authors claim that reports of OPEC's death are premature and cite as the reason the fact that OPEC producers were receiving two and a half times as much for each barrel of oil on Jan. 1 of this year as they did a year earlier.

OIL FACTS

The deepest well in the world is on the Kola peninsula in the U.S.S.R., according to data compiled by National Supply Company. The well is at 34,895 feet and still drilling.

TEMPORARY SERVICE...

Whether you have clerical or secretarial skills, accounting background or data processing experience, we'd like to discuss the possibility of your joining our staff of well-trained, professional personnel available for most types of temporary assignments. We'd like to discuss our benefit programs and salary scales with you!

SECRETARIAL SERVICE...

Enjoy the ease and benefits of utilizing our in-house staff for your answering service, typing or copying needs. Our word processing capabilities include personalized, individually typed repetitive letters, text storage and editing of contracts, manuals and yearbooks etc.

MICROFILM SERVICES...

Our newest service, microfilming, gives us the capability of transforming files and records into roll film, microjackets and fiche duplicates. This allows businesses to use space efficiently, provides a secure way to preserve important documents and simplifies filing and retrieval - all at a reasonable cost.

CONSULTING SERVICES...

Management and personnel consultants are available on a retainer basis. Career counseling is provided through programs and seminars to individuals, groups of employees, or your club or organization.

Santa Rita Club works to keep Basin history alive

The Santa Rita Club, The Permian Basin Petroleum Museum auxillary, helps keep alive the history of the region. The group takes its name from the Santa Rita No. 1, the discovery well in Reagan County, Texas that blew in May 28, 1923. Located on University of Texas Lands, this discovery led to the wealth of the University of Texas system.

St. Rita is the "Patron Saint of the Impossible". Promoting the well, Frank Pickrell talked to a group of Catholic women in New York who agreed to invest in the well with one condition: that Pickrell would christen the well in the name of St. Rita. When he returned to the well site, he did so by climbing the wooden derrick and sprinkling the rose petals which the women had given him for this purpose.

In early 1975, shortly before the Permian Basin Petroleum Museum was completed, members of the auxiliary to the Mining, Metallurgical, and Petroleum Engineers of the Permian Basin (Permian Aimees) took the museum as one of its service projects. Immediately these volunteers realized the museum needed its own auxiliary.

Members of the club helped prepare for the dedication of the museum by President Gerald Ford in September 1975.The Archives and Library was opened to the Public with a reception in April 1978. Members of the Santa Rita Club served refreshments and gave tours of the new facility.

In July 1979, Governor and Mrs. Clements visited the museum to dedicate the National Drilling Rig No. 1 in the Oil Patch. Several of the club members assisted.

When the new north wing opened in November 1981, George Bush, Vice-President of the United States, came to Midland to dedicate it. Several Santa Ritans assisted with this event, which included serving a catered luncheon to the Vice-President and other guests.

In the spring of 1982, the Santa Rita Club hosted two receptions for Walter Rundell Jr., author of Oil In West Texas And New Mexico: A Pictorial History O f The Permian Basin, the museum's first publication. Much of his research was done in the Library and Archives Center, which provided most of the photographs in the book.

The work of the volunteers is divided into three general areas: a) in the Gift Shop collecting admissions, selling merchandise, and acting as hosts to visitors; b) docents (or tour guides) for the museum; c) assisting in the Archives and Library. Upon completion of 25 hours work, a volunteer is given a plastic name badge; upon completion of each 100 hours, a bar designating the hours is placed beneath the name tag. Five hundred hours rates a gold badge.

Docents are busiest during November, February, and March guiding school tours. Last year 6,772 students were conducted on tours in the museum. A school tour is usually one and a half hours, but times can vary. Docents must attend special training sessions and receive certification before conducting tours.

Mrs. John Hammett is chairman for the Library and Archives committee. These volunteers, dubbed the "Archangels," work two to four hours weekly transcribing historical taped interviews, arranging private papers and records, and cataloging the wealth of archival material acquired by the museum.

Volunteers can choose the area of interest in which to work. A number of volunteers are active in more than one area. Santa Rita club volunteers man the museum booth at the biennial Permian Basin Oil Show held in Odessa.

The Santa Rita Club is not all work. There are at least four social functions, two of which are annual affairs. The annual business meeting is held as near as possible to Santa Rita Day, May 28, for installation of officers and committee reports. The other annual event is the Santa Margarita party held each September.

Other socials are in November and March. In addition, the museum trustees honor the volunteers with a reception each January.

A special group of volunteers has worked every month that the museum has been opened. They are: Mrs. William S. Blackman, Mrs. John P. Hammett, Mrs. Scott Hickman, Mrs. E. J. Hogan, Mrs. William W. McGrew, Mrs. Richard Mendenhall, Mrs. David Miller, Mrs. Bob Shoemaker, Mrs. Donald Troy, & Mrs. Floyd Wheeler.

Mrs. Wheeler, incidentally, was the first child born at Santa Rita, an oil camp 2 miles east of the Santa Rita discovery well. She was quite appropriately named "Rita".

Santa Rita Club membership now stands at 263. As of August 31, 1982, volunteers had contributed 53,720 hours of service since September 1975 when the museum opened.

THE NEED IS JUSTICE!
THE TIME IS NOW!

In Texas criminals sentenced to twelve years usually serve little more than two because juries aren't told about the "good time" and parole provisions of Texas law.

The criminal knows. The criminal's lawyer knows. The judge knows.

Mark White thinks the jury ought to know so that when they send a criminal to prison, he'll stay there.

Mark White will work for legislation that requires that the jury be told the truth about the job they have to do.

We have a governor who talks about crime.

What we need is a governor who will fight it. **Mark White** will.

OIL FACTS

The following bits of information were supplied by the Texas Mid-Continent Oil & Gas Association:

— Petroleum industry taxes accounted for 28 percent of all state taxes in 1981.

— The Texas petroleum industry's 1981 tax payments to state government totaled $2.2 billion in 1981.

— Texas' production taxes in 1981 amounted to $1.3 billion from crude oil and $901.9 million from natural gas.

— Texas oil and gas operators paid $2.3 million in regulatory taxes and $11.7 million in well servicing taxes in 1981.

Ultra-deep drilling rig uses new rotary hose

AKRON, Ohio — A drilling rig built to probe more than 10 miles below the earth's surface will conduct its search for oil and gas with a Goodyear rotary hose that represents a new technological frontier.

The hose is Goodyear's Flexsteel rotary drilling hose that's covered with a new, highly abrasion-resistant rubber called Carbryn. In laboratory tests, Carbryn-covered hose has lasted five times longer than standard hose.

Goodyear is offering Flexsteel rotary hose with test pressures of 8,000 — 10,000 pounds per square inch.

Murco Drilling Corporation's Rig 58, the world's largest land rig, has the ability to support 2 1/2 million pounds of casing and it is designed to drill 54,000 feet. The rig features 10,000 PSI test-rated Flexsteel hose measuring 70 feet long with an inside diameter of 3 1/2 inches.

"The hose is one of the longest we produce," said Paul Sullivan, marketing manager of industrial hose for Goodyear.

The hose also is one of the toughest developed.

In addition to the Carbryn cover, the hose is reinforced with extra steel cables to provide 25 percent more strength at the ends of the hose to accomodate new one-piece fittings.

"This gives the rig operator a snug-fitting hose that can sustain greater pressure more safely than ever before," Sullivan said.

Murco's Rig 58, currently drilling in the Texas Panhandle near Shamrock, has a 156-foot high mast and, overall, is about the same height as a 20-story office building.

"The rig was developed to explore formations untouched by the drill bit," said Murco's Jack Thompson, designer of the rig. "The rig actually is ahead of the technology needed to drill that deep, but when it becomes available, we'll have the rig to go with it."

With the development of new technology and equipment, Murco expects ultra-deep drilling to become commonplace in the future as economics make it feasible.

"There's only a handful of rigs that can operate below 30,000 feet," Thompson said. "When you need to drill below 50,000 feet, there's just Rig 58."

A 24,5000-foot well, reportedly the deepest in the world, is located about a mile away from the area Murco 58 is now exploring.

Nobody knows for sure how deep the rig will have to go in its search for oil but if it's a record-setting depth, there won't be any eyebrows raised.

Sivalls Inc., an Odessa-based manufacturer of oil and gas processing and storage equipment, will display 1/4 scale operating models of a hydrocarbon separation unit and a triethylene glycol dehydration unit at its display in Booths B48-50. The company has opened two new plants since the last Oil Show, in Pampa and Brownwood, Texas.

Long-time exhibitor returning to Basin oil show to tell of new plants, products

Sivalls Inc., with general offices and manufacturing plant in Odessa for 35 years, has completed two new manufacturing facilities since the last Permian Basin Oil Show.

The second plant is located in Pampa and specializes in oil treating, separation, and storage equipment. The third plant is located in Brownwood and specializes in wellhead gas handling equipment and gas dehydration equipment.

Sivalls' Odessa plant still manufactures all standard equipment plus both offshore and onshore custom design equipment for oil and gas processing.

For the 1982 Permian Basin Oil Show, Sivalls Inc. will occupy spaces 48, 49, and 50 in building "B" as it has for the past several years.

Sivalls' exhibit for 1982 will include two actual scale plastic operating models of gas well handling equipment. These operating models, complete with simulated oil and gas flow, are built to a 1/4 scale of the actual equipment.

The HSU-5B Hydrocarbon Separation Unit Model brings the gas-oil stream from the wellhead, preheats the gas to 150-160 degrees, reduces the pressure to pipeline pressure (700-1000 pounds), delivers the gas and liquid stream into a horizontal three phase high pressure separator which separates the gas, oil, and water, and then the oil and water are dumped to storage tanks for sale to the oil handlers. The "liquid free" gas then flows into the other model that is on display.

The second plastic working model is a triethylene glycol dehydration unit. The primary function of this unit is to dehydrate the natural gas (remove the water entrained in the natural gas as a vapor to approximately seven pounds of water per million cubic foot of gas). This process is accomplished by circulating reconcentrated triethylene glycol counter-current to the gas stream. The function of the remainder of the operating model in to remove the water from the saturated triethylene glycol and allow the glycol solution to be re-circulated continuously in dehydrating the continuous flow of gas.

Sivalls manufactures triethylene glycol dehydration units to handle gas volumes from 1/4 of a million cubic feet per day to one billion cubic feet of gas per day.

Also on display will be a variety of pictures of equipment that Sivalls manufactures and sells in every portion of the oil producing world. Sivalls will also have colored cut-a-way pictures describing the operation of these units along with other equipment manufactured by our company. Sivalls is the leader in design of not only the equipment on display, but all process type equipment used in the oil & gas industry and will have literature and design manuals available for its customers.

OIL FACTS

1862

The first recorded mineral interest sale takes place. J.W. Sherman of Cleveland, Ohio, sells a 1/16 interest in his lease on a farm for an old horse. He almost sells all of his interests later, before the well comes in producing oil worth $1.7 million.

REFINING...

Operator Henry Cook surveys the technological maze at the styrene plant process area of El Paso Products Company's petrochemical complex south of Odessa, one of the oil's last stops before distribution.

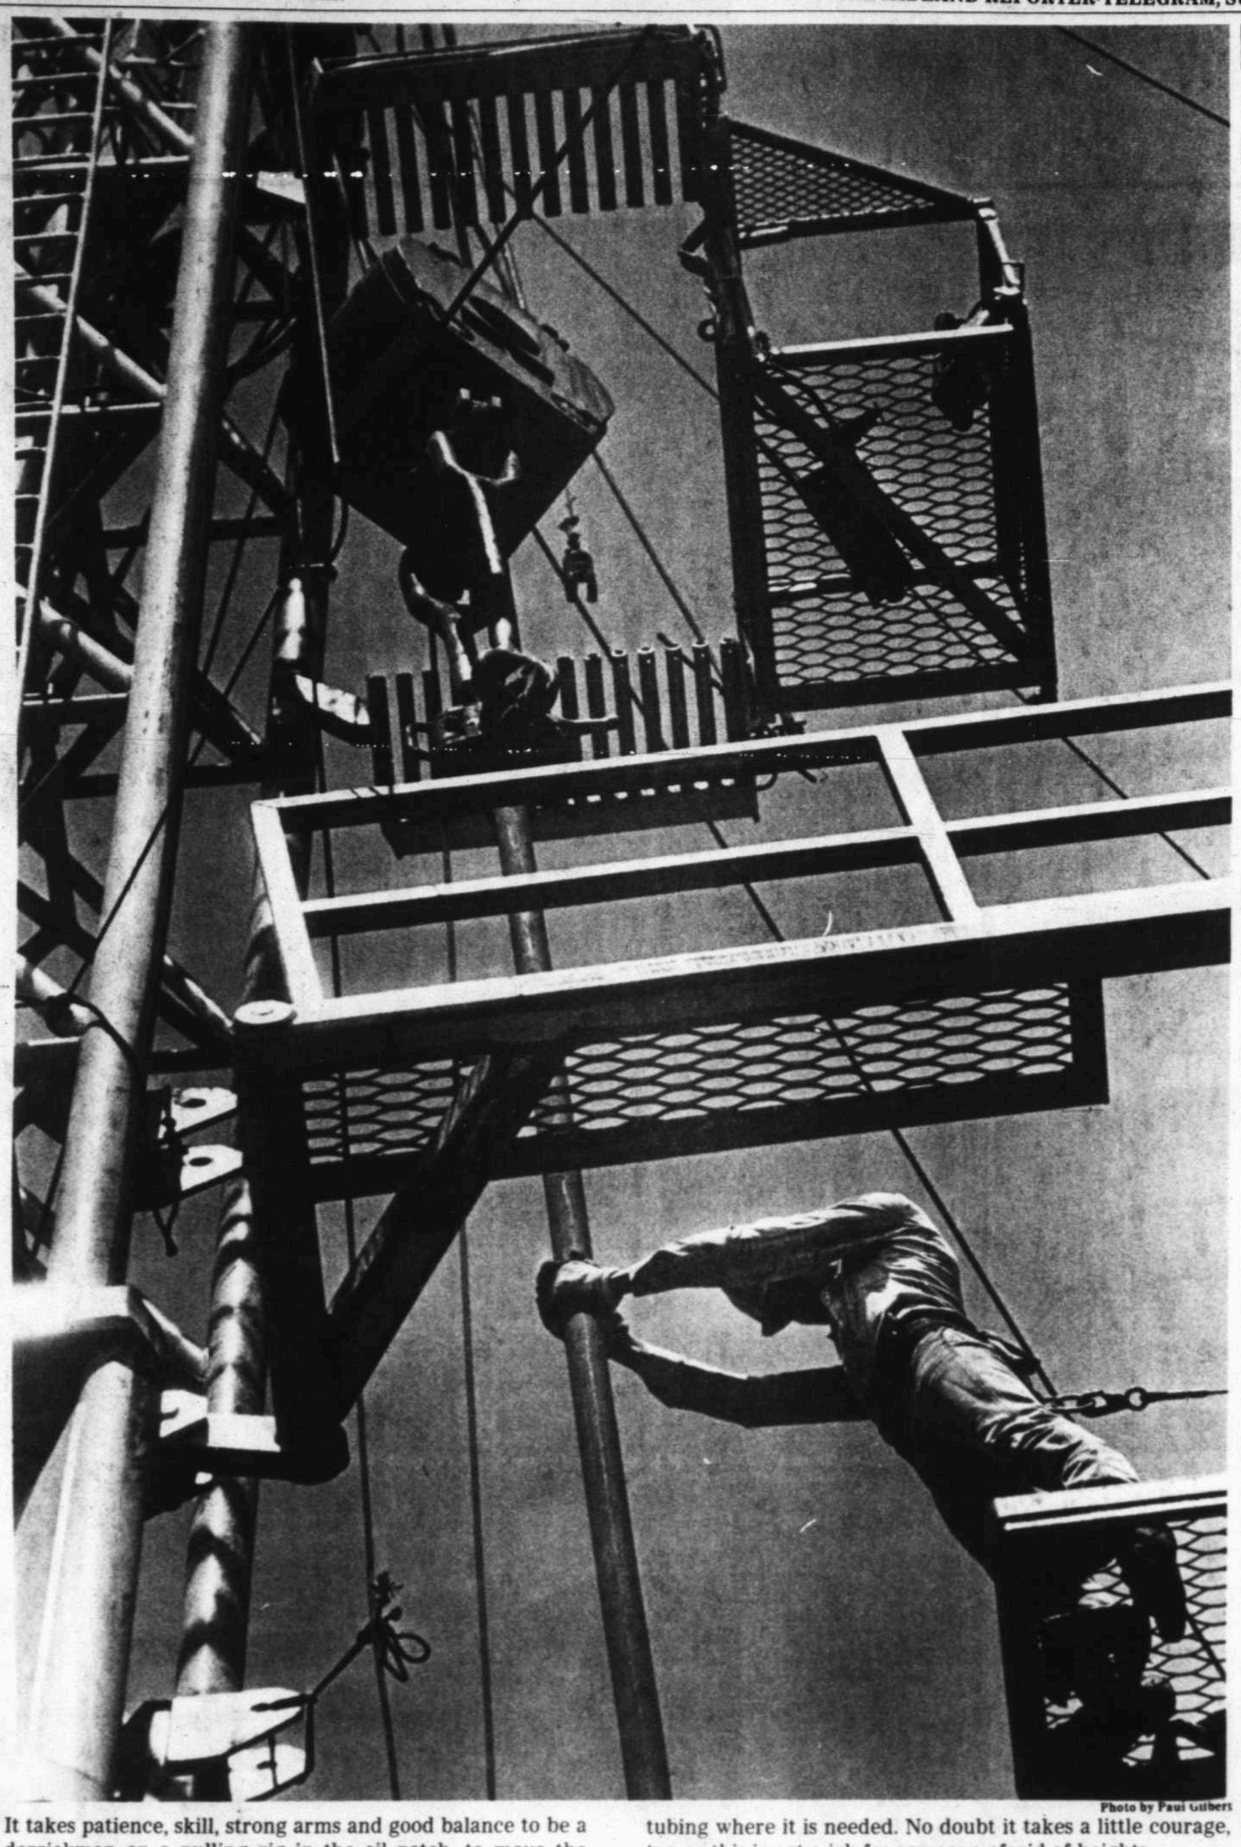

Photo by Paul Gilbert

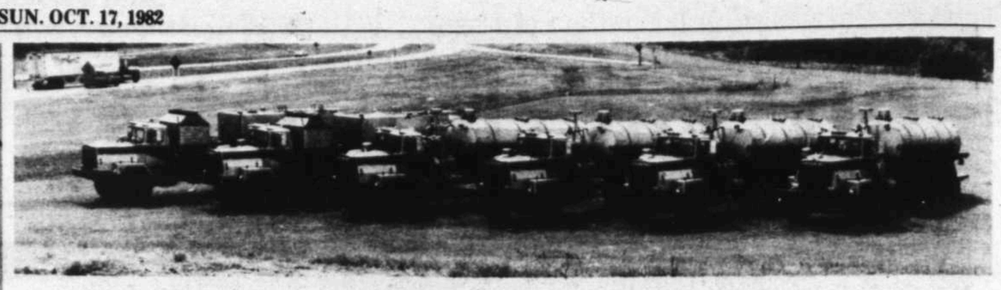
It takes patience, skill, strong arms and good balance to be a derrickman on a pulling rig in the oil patch, to move the tubing where it is needed. No doubt it takes a little courage, too, as this is not a job for someone afraid of heights.



These six trucks are the first of 100 barrel units going overseas in a shipment by Keyway, which has been a leader in oil heaters and vacuum kill trucks since 1954.

Exhibitor builds largest hot oilers

Keyway sets another milestone by building the largest ever hot oil units and vacuum kill trucks.

These six units pictured are the first shipment of one hundred barrel units going overseas.

Keyway has been a leader in oil heaters and has the distinction of being the only company continuously producing oil heaters since 1954.

Through high quality workmanship and material the patented Keyway Oil Heater has become the standard of the industry.

Quality is the watch-word with Keyway. Expert line foreman constantly monitor the progress of each worker to insure quality workmanship to match the first line material used to construct a unit that is virtually trouble free. The quality control program is second to none with inspection records and specifications recorded along with pictures of each unit, so that when a customer orders another unit he knows he will be getting the indentical top quality unit he did before.

In today's operation, efficiency is a must and Keyway delivers again with a 7 million BTU output heater with a thermal efficiency approaching 80 percent. These are available in oil, natural gas and propane fired.

Safety is top priority in the oil field and Keyway provides safety equipment that will prevent the burner from starting without sufficient flow of fluid or stop the burner if flow of fluid drops below a safe level and also stop the burner and activate the red warning lights on the control panel if pressure or temperature exceed the range set by the operator. A static ground wire is also furnished.

Keyway maintains a complete inventory to serve its customers anytime, day, night and weekends to minimize lost time.

The Keyway unit does its job safely and efficiently so you can satisfy your customers with professional service.

See you at the Oil Show at booth OS 119A.

New Tuff Breed parts to be seen

Gardner-Denver's Tuff Breed parts for pumping and drilling equipment will be shown at the Permian Basin Oil Show by Cooper Industries' Petroleum Equipment Division at Booth OS-32.

"The Tuff Breed banner is new," said Joe Massillo, parts marketing manager, "but the Gardner-Denver tradition of manufacturing quality parts for over 100 years just may be one of the best kept secrets in the oil patch. Even our very competitive pricing has remained somewhat undiscovered."

Gardner-Denver manufactures its own expendables and is putting the quality into these parts that build the reputation of the Gardner-Denver pumps, he continued. "Gardner-Denver pumps have been used by more drilling and operating services than all others."

Typical are Tuff Breed duplex and triplex liners. Their one-piece forgings are induction hardened and chromed to a hardness of 70 Rockwell C. Competitive liners are usually sleeved off a chrome cast iron with 55 to 60 Rockwell C hardness. The result according to Massillo is that Tuff Breed liners have a 15 percent lower co-efficient of friction and extended piston life.

"As today's economics for drilling, workover and production operations get tighter, we feel that the life and reliability factor of the full line of Tuff Breed parts will be more important than ever. A combination of price, quality and delivery is our way of helping beat the crunch."

Key to the Tuff Breed line's extra life and extra reliability is the company's commitment to the most modern manufacturing process and computerized design capabilities. The most advanced computer controlled robotics and other state-of-the-art technology are applied to increase productivity and quality. A computer enchanced checking machine with digital readout verifies dimensional accuracy more precisely than with conventional methods. The result is superior parts manufactured by Gardner-Denver with assurance of high quality at competitive prices.

Tuff Breed parts are widely available through major supply stores in the oil patch including the Permian Basin, West Texas and New Mexico areas.

"Using Our Resources to Further the Spirit of Free Enterprise in The Permian Basin."

Natural gas and taxes will continue to be hottest of topics

By WILLIAM GARLAND

From Our Washington Bureau

WASHINGTON — Natural gas and taxes.

They have been the major concerns of the oil and gas industry during the past few years and they'll continue to be among the hottest topics in Washington during the coming year.

That's the view of Lloyd Unsell, executive director of the Independent Petroleum Association of America and one of the most experienced oil and gas lobbyists in Washington.

Unsell predicted that the Reagan administration would come out early next year in strong support of decontrol of natural gas. And the president's backing should be enough to push a bill through Congress, he said.

"I just can't believe that if the president gets behind natural gas decontrol that the 98th Congress won't be of a mind to agree with him," said Unsell. "We haven't had a president advocating decontrol of natural gas since Eisenhower."

Next month's elections won't alter the outlook, according to Unsell.

"There's a lot of talk about a Democratic sweep, but that's not going to happen," he said. "I don't think (Congress) is going to change 1 percent. There's no basis for that kind of expectation."

"We've improved the House by about 100 votes since we came within two votes of passing that Krueger-Brown (decontrol) bill," said Unsell. "The Senate has been philosophically improved by about 30 votes since then." (Former Texas Democratic Rep. Robert Krueger was credited in 1977 with almost winning on the natural gas decontrol issue.)

Because of the conservative shift in Congress, "I think we can finally do something about (price controls)," he said. "We've been 28 years trying to do that: I think 1983 may be the year."

He said IPAA has been pushing Reagan to publicly back decontrol early next year. A similar effort failed this year when Reagan publicly announced in March that he would not support a decontrol bill in Congress for 1982. It was widely predicted then that the battle had only been postponed until after the fall elections.

"We're very much counting on the president to recommend that Congress speed up the phase-out of (the) price controls," said Unsell.

Unsell thinks Reagan will help on the tax front as well.

"Mr. Reagan said the other day there wouldn't be a tax bill unless there was a palace coup that sweeps him out," he said.

For the past two years, in the tax- and budget-minded 97th Congress, taxes have been the "principle concern" of independent oil and gas producers.

The tax cut bill of 1981 weakened the windfall profits tax on crude oil, and the bill raising taxes this year excluded independents from direct taxation.

"Last year our concern was trying to get in that tax bill. This year, it was to try to keep out of it." In both bills, independents came out far better than they might have.

Gains from the 1981 tax bill were the result of a so-called "bidding war" for the votes of Texas and other Southern congressmen to help pass either the Democratic or Republican versions of the tax cut.

After Jan. 1, crude oil production from "stripper wells," those wells that produce less than 10 barrels a day, will be totally exempt from the windfall profits tax, Unsell said. "To an independent in Texas producing a barrel of stripper, it will mean about $3.30 (per barrel), or over $1,200 per year."

But the economy will partially determine how successful the independents are in avoiding taxes this year.

"I'm hopeful we can escape new tax fights in the 98th Congress," he said. "But if this recession continues compounding deficit problems, it's not likely we will. If we don't see a revitalized economy very soon, we can expect another round of tax battles next year, and we'll be lucky to come out as well as we did last year."

API report warns U.S. has not yet gained energy security

By VIC OSTROWIDZKI
Hearst Washington Bureau

WASHINGTON — Although domestic oil production has improved, consumption has dropped and the OPEC stranglehold on prices has been weakened, the U.S. has not yet achieved energy security and there is no certainty that it ever will, the oil industry's official spokesman warns.

In a 41-page report entitled "Energy Security for the U.S.: Progress, Pitfalls and Potential," the American Petroleum Institute (API) insists government policies must become more favorable to the industry before this nation can have a secure energy future.

"Barring a major foreign catastrophe, such as a severe conflict in the Middle East, the next energy crisis should not happen," the report said, but it added such a crisis may occur anyway.

The study by the industry's public information and lobbying agency said that though oil imports have been reduced 50 percent and solid progress in conservation made, "millions of barrels a day of domestic energy production are being forfeited as a result of some public choices of the past."

The report reiterated long-standing industry positions. It recommended elimination of federal price controls on natural gas soon, contending that prior decontrol of crude oil prices had improved the energy situation. The organization also urged more leasing of government lands, onshore and offshore, to make additional energy resources available for development.

The API also recommended relaxation of what it called "complex and rigid" environmental laws and regulations that "unnecessarily restrict energy development" and urged the government to speed up licensing of new nuclear plants and locating sites for waste storage facilities. These steps are highly controversial and have been the subject of heated Congressional debate for many years.

"Careful changes in the Clean Air Act — based on comprehensive and current scientific knowledge — could add the equivalent of more than 1 million barrels a day of oil to energy production from three areas alone within the next 20 years," the industry report said. Extension of the Clean Air Act is one of the major issues facing the lame-duck Congress which will return in November after the election.

The API also warned the federal and state governments not to look to oil for additional tax revenues. It said new taxes on petroleum — coming on top of the oil excise tax passed in 1980 and decreased petroleum demand — would further reduce the industry's ability to raise capital for additional energy projects.

The industry cited federal statistics suggesting that some 85 percent of U.S. crude oil and 40 percent of natural gas — "undiscovered recoverable resources" — may lie beneath unexplored government lands, onshore and offshore. Environmentalists, however, contest those figures.

Government lands now provide only about 16 percent of domestic crude oil and 30 percent of natural gas production. The industry contended that if it were free to explore without certain environmental "restraints" this country might realize the equivalent of more than 1 million barrels of oil a day in domestic energy.

It said another 1.5 million barrels per day would not be realized because of the imposition of the "windfall profits" tax imposed by the federal government.

Oil show exhibitor has roots in Switzerland, branch in Basin

Adia, founded in Lausanne, Switzerland, is one of the largest temporary service companies in the world, with the U. S. Headquarters in Menlo Park, California. The size and reputation is attributed to superior service.

The Adia Group was founded in 1957 in Lausanne, a city on the banks of Lake Geneva, surrounded by mountains and vineyards. Switzerland, a country poor in natural resources, owes its prosperity to development of its richest source — man.

Locally, the ADIA Group came to Midland in 1972 and Odessa in 1973. With locations in both cities, the ADIA offices are prepared to take care of staffing problems throughout the Petroplex.

Call for: (1) substitute staffing — We'll meet your needs with qualified people who have the skills and experienced to do the job right from the start with minimum orientation. (2) Peak workload staffing - When a predictable (inventory time or year-end audit) or unpredictable (a rash of new orders) work period arises, ADIA can supply the skills and number of workers you require. (3) Payrolling — In some specific cases, you can select your own employees and put them on our payroll.

This is often an easier, less-expensive way to bring back former employees even after mandatory retirement, bring in temporary and project workers, or handle new employee probationary periods. Remember, ADIA employs and pays your temporary help, saving you time, money, administrative and payroll problems.

Before you call for ADIA temporaries, ADIA hires them. The Adia tests are some of the most exacting and rigorous in the industry. In addition to testing, ADIA interviews, and when possible, reference checks each applicant. Adia looks for an ability to adapt to new situations, willingness to perform at peak efficiency, motivation for working temporary in the first place, dependability, enthusiasm, and attitude. The result? Good people. It's as simple as that.

Adia is people who care about people. Its temporaries are ADIA employees, many of whom have worked for ADIA for years, because they prefer to work on a temporary basis. ADIA employee's payroll and benefits represent nearly three-fourths of its total revenue. It is the only temporary service to offer a comprehensive benefit program to its employees. Most important to its temporaries, ADIA does its best to keep them working when they want to work at a job that best fits their qualifications.

Adia can save you money. If your workload never exceeds the capacity of your workforce, you may have too many people. It's a sure bet that if you seldom have "too much work" for your staff to handle, then you have employees performing at less than peak efficiency. This is inefficiency, and it drains profits.

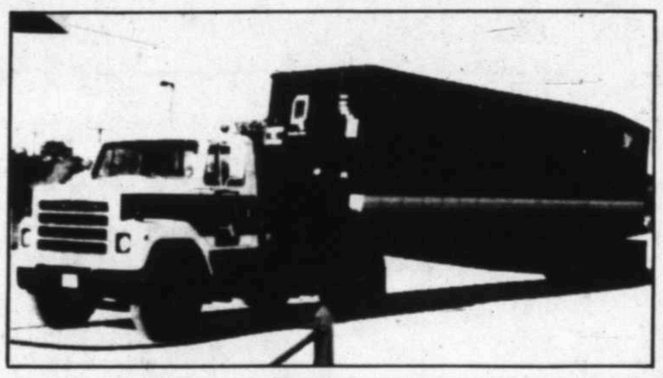
By streamlining your current staff and calling ADIA during peak periods, you will pay only for the hours worked. You no longer pay extra for sick leaves, tardiness, "slow periods" and other intangible costs. ADIA will show you how to achieve more staff flexibility, eliminate fixed costs and avoid the morale problem caused by layoffs. It will work with you to develop a plan that could make a dramatic difference in your productivity, your profitability. When you work with Adia, the big difference adds up on the bottom line.

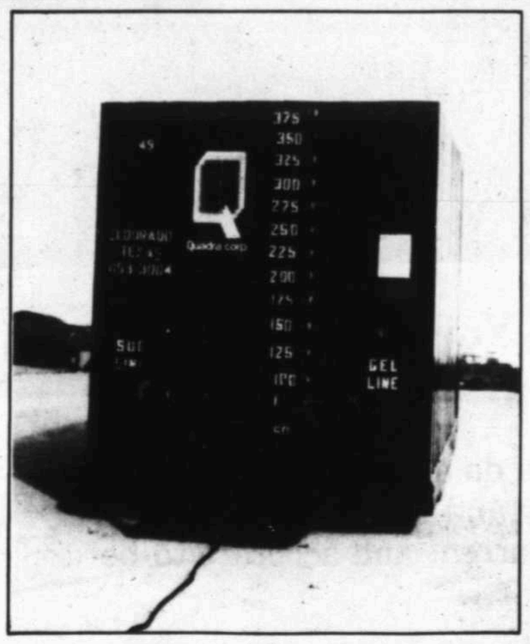
Adia service is personal service, and the Adia people serving you locally are local people you will come to know and trust. The office began with a philosophy that emphasized quality service as the best route to growth and it's paid off. With more than 300 offices worldwide, Adia is one of the largest temporary help firms in the world. As important, it's a leader in developing innovative ways to use temporary help so business can take advantage of its flexibility and responsiveness. So don't measure it by its size, measure it by its performance for you.

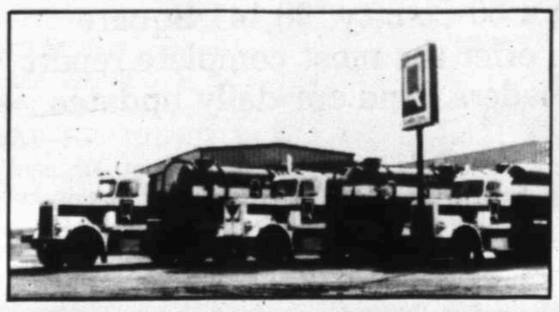
The ADIA guarantee backs up its claim for superior performance of its people. If you're not satisfied with your ADIA temporary, for whatever reason, let ADIA know as soon as possible. The company send you an immediate replacement. Notify ADIA on the first day and it'll make sure you're not charged for the hours worked by the original person.

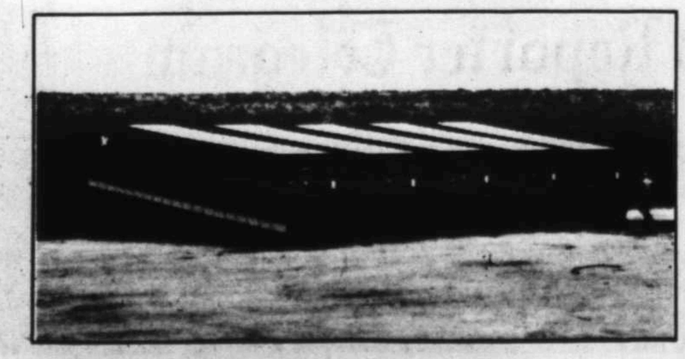
The ADIA staff waiting to serve you is small, and are people you will come to know well. The office managers, DeDe Webb in Midland and Deborah Marion in Odessa, are the voices that will become very familiar to you. They coordinate all of the inner office activities that need to take place when you call for help. They will take complete job description, ask a few pertinent questions about your company, and then, within 30 minutes, return your call with the name of the temporary who will be coming to help.

The branch managers, Ellen Harris in Midland and Debbie Bostick in Odessa, are the faces that represent ADIA. They will call on your company with up-to-date information about the services ADIA has to offer, and suggest ways to take care of your staffing problems. At your company, they will observe and obtain as much information about your company as is possible. This information will be passed on to the office managers. So, the next time you need a staffing solution, give ADIA a call, Midland: 683-6111 or Odessa: 335-0513. It could become a habit.









Quadra Corp Is a diversified oil service company with the majority of service in frac tank rental. In some areas, however, we provide vacuum truck service, steam cleaning, water hauling and kill truck service. Our base operation is in Midland, with service points at Eldorado, Texas; Artesia, New Mexico, Laredo, Texas.

Quadra Corp was formed in 1978 and has enjoyed a rapid, stable growth. Beginning in West Texas with 30 tanks, today we have a total of 176 tanks and have expanded operations to South Texas and Southeast New Mexico. Quadra personnel have extensive experience in oil well stimulation, ranging from management to field service, with such companies as Halliburton, Cardinal and The Western Company. From conception to present, Quadra's purpose is to serve its customers with quality products, personal, professional service and competitive pricing.

24-hour, 7-day mobile frac tank service

Over 100 per cent of our frac tanks are the square-axle type, allowing easy mobility and 24-hour, 7-day a week service. Other Quadra features are: complete manifolding, improved gauging systems, quick-opening manways for easy cleaning and 4-inch gelling lines for better blending of frac fluids. Many have sight eyes for easy gauging on flowbacks. To insure quality service, we maintain all of our equipment with an established preventitive maintenance system.

We at Quadra appreciate our customers who have helped us become a successful, growing, progessive company. We look forward to helping new customers and making new friends.

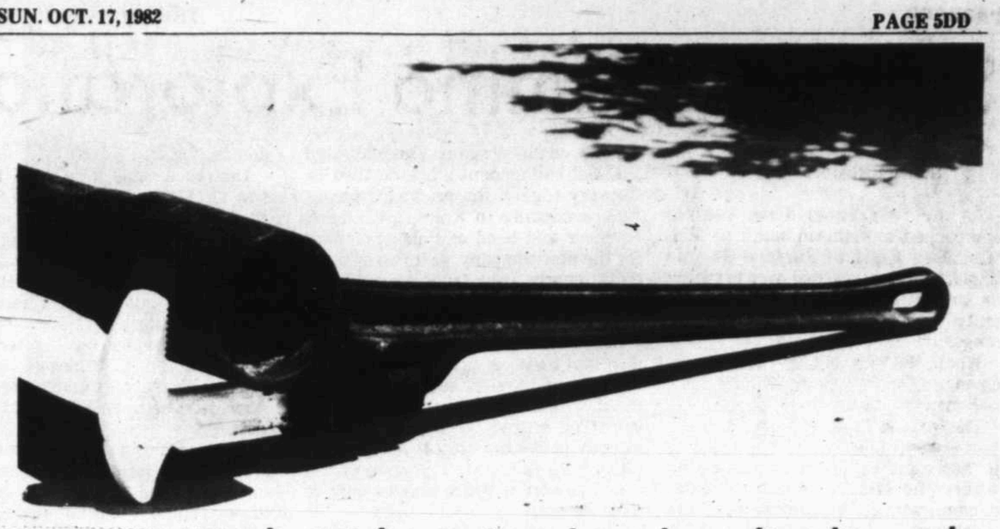
This is one of several mud pumps which form part of the mvriad of equipment needed to run drilling mud into the hole and back out again to the mud pits.



Pipe wrench with a heel to be displayed

Muschalek Tool Co. will be showing in Booth G-20 its 1982 U.S. Patented pipe wrench with a "heel" hook jaw.

The pipe wrench includes a laterally outwardly projecting heel portion supported from the L-shaped jaw, and which projects laterally outwardly from the jaw a distance that allows the pipe wrench to be supported from a floor or similar surface.

The heel portion supports one end of the pipe wrench and the free end of the handle supports the other end of the pipe wrench in a manner such that all other components of the pipe wrench are spaced relative to the floor.

Surface Gamma Exploration trying a new 'black box'

By LESLIE HAINES
Energy-Business Writer

As the four-wheel drive vehicle approached a wellhead south of Midland, Dan Knox of Surface Gamma Exploration Inc. reached over to switch on the small surface gamma logging unit sitting between him and the passenger.

Would the unit pick up radon gasses emanating from a hydrocarbon formation many feet below?

The vehicle lumbered over the terrain at eight miles an hour. As soon as it was next to the producing well where the Midland company gives demonstrations, the gamma log unit's indicators fluctuated markedly, showing the presence of hydrocarbons directly beneath the unit.

As the vehicle circled the well, the needles changed again. This indicated the well had evidently been drilled on the very edge of the producing formation, according to Knox, a chemical engineer and head of field operations for the new company. Just two or three truck lengths away from the wellhead, the unit showed no presence of oil or gas directly beneath it.

Knox switched off the surface gamma unit, a multi-channeled, nuclear geophysical surveying instrument which its inventor claims can identify shows of hydrocarbons directly below the unit. It does this by picking up the specific portion of the radon spectrum which relates only to hydrocarbons.

Tim Lawrence, son of the unit's inventor, and the man who has tinkered with it for the last five years to perfect it, smiled broadly after the demonstration.

Lawrence came here from Houston for the 'demo.' Surface Gamma Exploration of Midland has exclusive rights to market the surveying service in the Permian Basin from Nuclear Geophysical Industries of Houston, where the unit is manufactured. A patent is pending.

Surface Gamma began offering the service a few months ago, and has worked for several major companies since then, between many field demonstrations.

Certain items in the gamma log unit are totally proprietary, Lawrence said, but the overall equipment — and the theory behind it — is not unique.

"It's the calibration of the equipment that's new," he said. "The forerunner of this was the six-foot long ionization chamber. We now have the miniaturized technology," to create a portable unit weighing only 37.5 pounds.

While they realize nothing is 100 percent assured in the oil and gas industry, Knox, Dick Maxwell and Don Reed, of Surface Gamma Exploration, feel they have a pretty sure bet to offer the public.

The main obstacle seems to be the poor reputation related to this type of exploration technology developed in the past, which has created a lot of skepticism in the oil patch, they said.

"If we can just get them (customers) into this truck and let them see how it works, they'll be convinced," said Knox.

"It's a case of 'show me,'" he added. "Once they see it, then they say 'You guys have got something.'"

In one instance, the company was asked to identify the two best producers in a field of several wells near Midland, and the gamma log unit was able to do it, said Knox.

In another case, "We were given a lease with a lot of wells on it, and we traversed over six to eight wells. One was a real good producer, as opposed to the others, which were marginal. The gamma log unit picked it out," added Maxwell, company vice president.

"They said to us, 'You guys have been looking at our data.' But that stuff is so closely held, there's no way we could have seen it."

The Midland firm works closely with a company's geologists and geophysicists whenever a test or "demo" is made. "The first thing geologists think is that they'll be out of a job," Lawrence said, "but that's not true. This shouldn't threaten anybody."

Scientists have long been trying to prove a relationship exists between the presence of radon, as identified by the gamma log unit, and shows of hydrocarbons.

According to an Oil and Gas Journal article on the subject in May 1982, "If the relationship does exist, measurement of either anomalous alpha or gamma radiation should indicate the presence of hydrocarbon reservoirs."

Lawrence and the men at Surface Gamma Exploration are claiming the relationship does exist, their unit shows it, and they can prove it on a person's lease.

The theory of radiometric surveying has been around since at least the 1940s, but Lawrence claims that with technology now available in the 1980s, surface gamma exploration will work 90 to 95 percent of the time.

"Radiometrics looked at total radiation, from the earth, the sun, etc.," he explained. "We are looking at a very specific portion of the gamma ray related to radon gas (a degradation of uranium), which is related to hydrocarbons."

The gamma log unit is best used to define the extent of a pool or reservoir in areas of known production. It can also find the boundaries of channels.

The unit has limits, and Lawrence is quick to admit it. It does not indicate which type of hydrocarbon — oil or gas — is present, or the depth of the formation, or its permeability. It does not work well in swampy or marshy areas, through the surface of paved highways or caliche, or when it has just recently rained heavily.

But if the survey area is dry, results are definite, according to the men at Surface Gamma Exploration.

"You can disqualify a prospect with this unit, and save the money and time of any further seismic work," claimed Lawrence. "If you get an anomaly or show, you then come in with the other seismic techniques."

Since the probes are directional, and gamma radiation migrates vertically, readings from the unit relate only to areas directly beneath the unit — thus, when a vehicle with the unit moves just a few yards away from a well, for example, it will indicate a drop in hydrocarbons, or even a total lack thereof, if the well is on the very edge of a formation.

"This is not intended to replace traditional exploration techniques," Lawrence cautioned, "but it is definitely an additional tool."

Watt a mixed blessing for industry

By PEGGY SIMPSON
Hearst Washington Bureau

WASHINGTON — Oil and gas executives say Interior Secretary James Watt has been a mixed blessing, with his religious and ideological fervor stirring up a backlash that has hurt the industry he wants to help.

They won't talk about it publicly. But Watt's impact on the industry fortunes are a frequent subject of behind-the-scenes commiserating.

"We were worried sick about it," said one insider, when Watt first stepped into controversy by rejecting limits on oil or gas drilling because he said the "second coming" would occur before supplies were depleted.

It was the first sign they had of his religious beliefs, which they take as sincere and deeply held but as questionable in determining national policy — even when it is in their interest.

"We were kind of pleased that someone was picking up the cudgels for us. But we grew more and more nervous," the industry leader said. "We were fearful that he was giving them (the environmentalists) so much ammunition. And that's still the problem."

In short, it has been Watt's confrontationalist instincts that have alarmed the energy industry and caused mischief for it, not so much the goals he espouses.

"It's been a mixed picture. We'd catch ourselves saying, 'Gee, we wish he hadn't taken on those particular offshore California lands at just that time.' On the other hand, he's aggressive and is going to take them all on (the environmentalists)," the industry leader said.

When Watt opened up the bulk of the country's coastline for offshore leasing, he shocked even the industry. The industry has responded with a marginal increase in offshore exploration.

"But on-shore — we've got real problems," the industry leader conceded, with Congress seriously considering legislation to reinforce prohibitions against drilling in wilderness areas.

This is an explicit rebuff to Watt and "the tone he set . . . the implication that he might just go into those areas like Wyoming" despite congressional mandates to the contrary, the industry leader said.

Some energy leaders say they think the damage has been done and whether Watt stays or goes now is immaterial, especially since he has been muzzled.

Others say Watt is harmful to the industry's health and they hope he leaves after the elections but even they are loath to go beyond cryptic cocktail party talk about the subject with Reagan aides.

They feel abashed at appearing ungrateful when Watt has gone overboard to do what they always said they wanted, such as their choice of offshore coastline drilling sites.

They know Watt remains a top GOP fundraiser — and they aren't sure but what he retains the personal support of President Reagan himself.

The real reason, however, is they are reluctant to complain about Watt when they will be asking another major favor from the administration soon after the elections: to put the muscle on Congress to push through a controversial deregulation of natural gas early in 1983.

Victaulic shows grooved pipe fittings

The complete line of grooved and plain end piping products for oilfield services will be displayed by Victaulic Company of America at the oil show. Grooved piping is the fastest, easiest, most economical method of joining pipe for on-shore or off-shore production and drilling services, as well as secondary recovery, tank batteries, automation, refinery/plant piping and many other process applications.

Featured at the booth will be the Victaulic Hugger Style 995 coupling for mechanically joining plain end high density polyethylene or polybutylene pipe. Cutaway units will show use of Victaulic system on steel, stainless, plastic-coated, rubber or urethane-lined, and other pipe.

Victaulic recently opened a new regional stocking facility in Odessa.In operation at a previous location since 1955, the branch was moved to a newly constructed office/warehouse with increased stocking area to supply the ever growing demand for Victaulic products in the "oil-patch."

Victaulic Company of America is the originator and developer of the grooved piping method of mechanically joining pipe. Established in 1925, Victaulic is now a marketing and manufacturing organization with 80 factory representatives and stocking distribution throughout North America.

The grooved piping method developed from a need seen during World War I for rapidly assembling pipe to supply invasion forces. Originally, the Victaulic mechanical joining method utilized pipe with a shouldered or built-up end. Pipe preparation was simplified by the development of cut grooving techniques. Standard pipe is designed with sufficient wall to permit threading. Since grooving does not cut as deeply as threading, the integrity of the pipe could be maintained.

Based on their development of the grooved method, Victaulic proceeded to design and produce an expanding line of components for the grooved method. Standard couplings and fittings were designed through 24-inch. Other couplings up to 66-inch were developed for water and sewage, power plant and mining operations in the late 1920's and early '30's.

After extensive use for military, civil defense, and emergency piping in the early 1940's, Victualic embarked on new product development. The grooving procedure was taken out of the pipe shop in 1948, when Victaulic developed the first field cut grooving tools. The 1950's saw the emergence of the Victaulic Vic-Easy grooving concept for cold forming a groove on less than standard weight pipe. Tool development has continued, and Victaulic has a complete line of cut and roll grooving tools for pipe from 3/4-inch through 24-inch, plus accessories to provide complete fab shop or jobsite production.

Victaulic piping products are primarily malleable and ductile iron castings. These materials were selected for the combination of toughness and durability. Victaulic has two casting facilities located in Eastern Pennsylvania.

The Victaulic grooved piping method is unique for its versatility. It is applicable for most pipe materials, including lightwall, standard and extra heavy steel; stainless steel and aluminum; PVC, ABS, and other plastics, as well as FRP glass fiber pipe and high density polyethylene (HDP) or polybutylene pipe. The Victaulic system includes products for cast pipe (gray and ductile) of AWWA dimensions from 3-inch through 48-inch.

Couplings as large as 66-inch are available for joining pipe with applied Vic-Ring collars.

Applications cover the spectrum of industries. The speed of assembly, easy jobsite preparation and reduction of total installed cost, have universal appeal. Building services include domestic hot and cold water, chilled and heating hot water, plumbing and utilities services. Fire protection systems are a major application for Victaulic. Industrial plant process, hydraulics, lubrication, and even original equipment services are frequent. Victaulic is used extensively in water and waste water treatment plants across the country. Other uses include mining, oilfield production, power plant, military and marine systems.

OIL FACTS

1861

— On April 17, the first flowing oil well is drilled on the Buchanan farm near Oil Creek, Pa. Little and Merricks's well on the farm roars in and flows 3,000 barrels of oil. It explodes, catches fire and 19 lives are lost. This is the first recorded instance of such an explosion.

— Lease bonus payments come into use with $200 and $600 being paid as incentives to sign leases, in addition to royalty payments.

1862

— On July 1, Congress passes a federal duty of 10 cents a gallon on refined petroleum.

— On Dec. 12, casing is first used, on a well on Tidioute Island.

New technology makes high-risk oil patch jobs even more risky

By GAIL BURKE
Staff Writer

Working in the oil fields always has been a high risk occupation, but today with technological and industrial progress there are many more associated risks.

Most accidents — from falling off a rig to losing a limb — can be prevented.

Oil companies have recognized today's risks — hazardous substances and complex machinery.

Safety has become a top priority in these firms. Many companies have their own safety program or hire safety consultants.

One such consultant firm — Safety International Inc. — has recognized the need for safety in the oil industry and is providing comprehensive safety programs in the oil and gas fields of West Texas.

"Safety is not an eight-to-five job," said Phil Graves, president of Safety International Inc. "It must be 24 hours a day, 365 days a year."

Common sense is the first rule for safety. That means proper clothing, steel-toed boots and hard hats, along with protective guards on machinery.

Safety International and individual oil companies offer educational instruction in first aid, cardio-pulmonary resuscitation, respiratory training, personal health and safety courses, defensive driving and hazardous material handling.

Because H2S (hydrogen sulfide) is common in the West Texas area, companies educate their workers, providing safe working conditions in areas with this lethal, rotten-egg smelling gas.

Devices called fresh-air packs have been introduced for the safety of the oil field worker.

In the fields where the sour-scented gas is detected, workers carry small bottles, holding five to ten minutes of fresh air on their backs. There are also 30-minute packs that can be refilled for an indefinite time.

Detection and monitoring equipment can also be effective in accident prevention.

Lights, sirens and other warning devices are placed in the oil fields to forewarn workers of a potentially hazardous situation.

But most accidents in the oil fields occur "to someone not paying attention," Graves said.

On-going training through safety meetings and maintenance of equipment are essential for oil field safety.

Safety meetings refresh and instruct the workers on fundamental safety procedures, including on-site equipment operation training, lethal substance monitoring, drug and alcohol awareness, fire suppression and detection systems and overall accident prevention.

Safety programs and instruction help oil field workers prevent accidents by respecting their co-workers and reporting any hazardous situation.

When companies have little or no turnover in their crews, they may not need the safety meetings as often as a company that may have a new crew every week, Graves noted.

And the oil company's safety coordinator or inspector is a crucial person in any safety program.

Graves said most accidents happen after dark. A company must be willing to employ a safety inspector that will do 90 percent field work — and that includes making spot checks at 3 a.m. and holidays — and 10 percent paperwork.

If there is an accident which one of the local hospitals is not equipped to handle, Midland/Odessa charter aircraft offer air ambulance service, but not exclusively. It is standard procedure for many companies to call one of the 24-hour charter services if a transport is needed.

A spokesperson for a local charter said although an aircraft can provide the means of transportation for an accident victim, there are "no companies in this area that are exclusively air ambulances."

"You get into liability," the spokesperson said. "Most of the charters deal directly with the physician and we discuss the needs of the patient. It is the responsibility of the doctor to provide the proper equipment needed — cardiac, for instance — and usually a doctor and preferably a trauma nurse escorts the patient."

The oil industry is becoming more and more aware of the potential dangers in the fields.

Graves said a company can get safety attention foremost "by letting the employee know you're interested — a good solid program in the fundamentals of safety can save someone's life — somebody's blood has made safety programs what they are today. Essential."

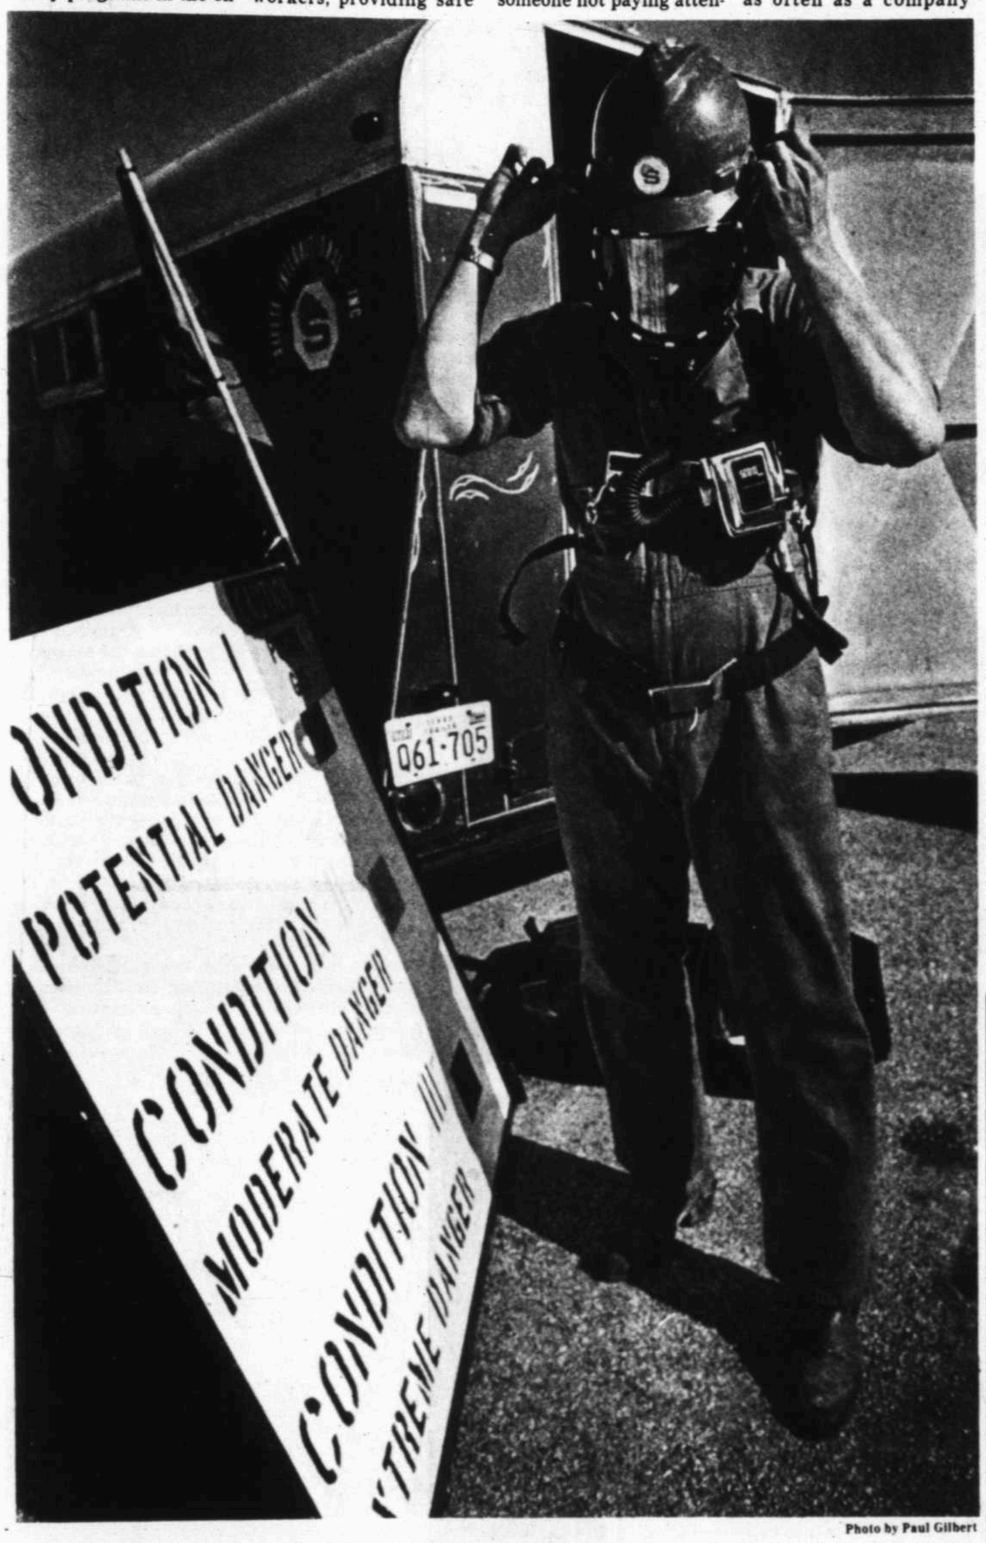

Photo by Paul Gilbert

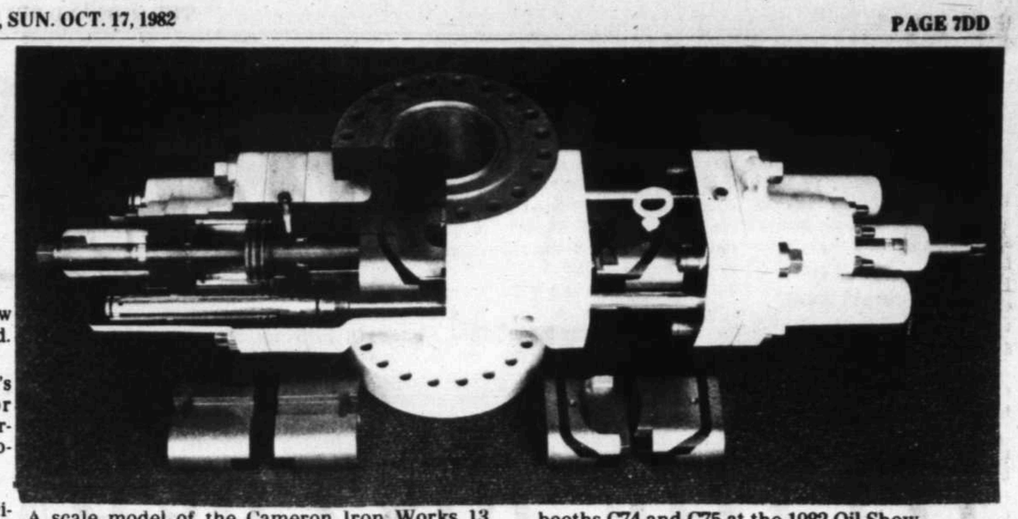
Safety technician John Farris of Safety International Inc. prepares to go on a drilling location, where he will monitor H2S levels in the air. The poisonous gas can be deadly if proper precautions are not taken.



A scale model of the Cameron Iron Works 13 5/8-inch, 10,000 psi U BOP will be on display in booths C74 and C75 at the 1982 Oil Show.

Pressure control items to be shown

HOUSTON — Cameron Iron Works Inc., a leader in oil field pressure control equipment, will display a variety of gate valves, chokes and scale models of its ram type and annular blowout preventers at booths C74-75 of the 1982 Permian Basin Oil Show in Odessa.

Cameron brings to the oil patch some of the most rigorously-tested pressure control equipment that meets or exceeds industry standards. Through use of special trims, alloys and its new Cam-Cladding bonding process, Cameron's pressure control equipment is able to meet the demands of increasingly hostile environments.

Cameron Iron Works, Inc. (NYSE: CIW), organized in 1920 as a Texas corporation, is a vertically-integrated company engaged in the design, manufacture, and marketing of a broad range of oil tools, ball valves, and forged products. These items are used by oil and gas drilling and production industries as well as by aviation, pipeline construction, power generation, and petrochemical processing and refining industries.

THE OILFIELD IS NO PLACE FOR AMATEURS

...AND THERE'S NO SUBSTITUTE FOR THE EXPERIENCE BEHIND STARR FIDELITY.

That experience begins with men like company president Ron Farquhar, a 25-year veteran in all phases of the oil industry.

And, he's just one of the team of experts at Starr Fidelity, working to provide progressive and innovative service as one of the Permian Basin's leading supplier of fuels and lubricants.

Now, in addition to their 24-hour service and full line of fuels and lubrication products, Farquhar and the folks at Starr Fidelity have announced the opening of their new technical services department. Individualized programs designed especially for Starr Fidelity's customers will reduce maintenance costs, extend the life of equipment and increase efficiency in the field through:

LUBRICATION TECHNOLOGY SEMINARS *
PREVENTATIVE MAINTENANCE SEMINARS *
FUEL MANAGEMENT PROGRAMS *
CUSTOMIZED PREVENTATIVE MAINTENANCE PROGRAMS *
INSPECTION AND EVALUATION OF FAILED EQUIPMENT *
USED ENGINE OIL ANALYSIS PROGRAMS *
SOLUTIONS TO LUBRICATION PROBLEMS AND RIG SURVEYS FOR LUBRICATION RECOMMENDATION PURPOSES *

For more information on Starr Fidelity's new technical services program, contact our sales department today.

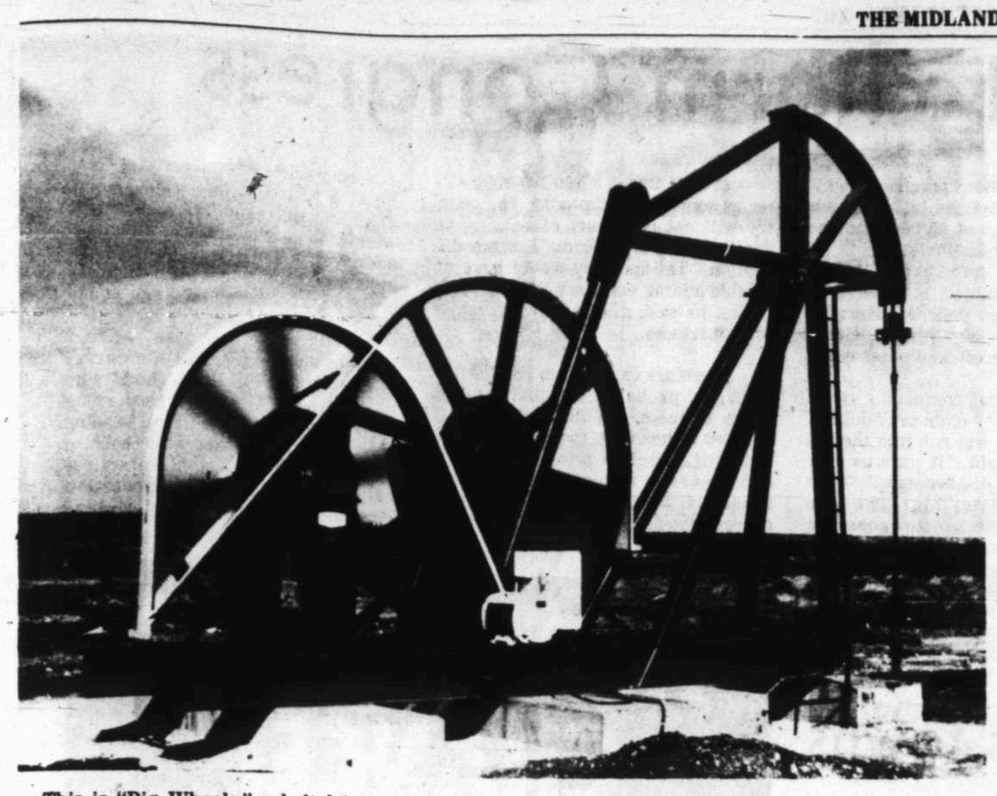
WELCOME

TO THE 1982 PERMIAN BASIN OIL SHOW

GOVERNOR AND MRS. WILLIAM P. CLEMENTS,JR.

Political Ad Paid For By Ford Chapman, 2004 Humble, Midland, Texas



This is "Big Wheels," a belt-driven pumping unit manufactured by Grooves Inc. in Odessa. The prototype unit is still on a well southeast of Midland after two years, and no maintenance has been necessary other than lubrication. President Jerry Watson expects the belts to operate another four years before replacement is required.

Petroleum reserves remain stable

By DORY DEVLIN
Hearst
Washington Bureau

WASHINGTON — The nation's crude oil and natural gas proved reserves remained virtually stable in 1981 while new field discoveries rose, the Department of Energy reports.

Crude oil proved reserves decreased 379 million barrels, or only 1.3 percent, in 1981, says the Energy Department's annual report on U.S. Crude Oil, Natural Gas and Natural Gas Liquids Reserves. (The Energy Department defines "proved" reserves as those which can be recovered under existing economic and operating conditions.)

Natural gas reserves increased 1.4 percent last year while natural gas liquids reserves increased 5.1 percent. The natural gas liquids reserves increase is attributed to increased discoveries, the report says.

Total crude oil discoveries rose 34 percent from 1980. Last year's level of crude oil discoveries was the highest since 1965, excluding the 1970 Prudhoe Bay Field reserves finding, said J. Erich Evered, an Energy Department official.

New field discoveries for natural gas were 47 percent higher in 1981 than in 1980, and 87 percent higher for natural gas liquids during the same period.

Evered noted that these findings "indicate continued stabilization of the country's oil and gas reserve inventory after a ten-year period of decline."

The Energy Department estimates that U.S. proved reserves, as of Dec. 31, 1981, were 29.4 billion barrels of crude oil, 201.7 trillion cubic feet of dry natural gas, and 7.1 billion barrels of natural gas liquids.

Texas is second to Alaska in the number of proved crude oil reserve fields with 8,093, down from 8,206 in 1980. Alaska has 8,283 reserves and California has 5,441.

Ninety-nine crude oil reserve discoveries were made in Louisiana in 1981. Texas boasts the second highest number of crude oil discoveries at 29. Discoveries in other states were minimal, averaging between 0 and 5.

Texas remains the richest natural gas state with 55,688 total natural gas proved reserves. Louisiana is second with 48,448 reserves and Alaska has 33,049.

The most natural gas new field discoveries, 6,840, were made in Louisiana in 1981. In Texas, 6,666 new field discoveries were made.

Odessa-made Big Wheels pumper unit may be seen during oil show

The 1982 Oil Show is the second Permian Basin Show for Grooves Incorporated, an Odessa based firm that manufactures "Big Wheels," a very successful belt driven pumping unit.

Grooves President, Jerry Watson, is also an engineer and the designer of "Big Wheels". Watson is a 1972 graduate of Oklahoma State University. Watson worked as an equipment engineer for a major drilling contractor for three years after his graduation and before moving to Odessa where he managed a large equipment repair center.

Grooves was formed in late 1980 after the prototype of "Big Wheels" proved successful. The prototype unit was a 114/133/54. It was placed on a well southeast of Midland, where it remains today.

This unit has had nothing done to it except lubrication. The belts have proven their durability and ability to handle the pumping unit application insofar as they have not required any attention, not even an adjustment, in almost two years of continual operation. The belts remain in excellent condition and are expected to operate for another four years before replacement will be required.

Watson's idea of a belt driven pumping unit would have been shelved in the beginning were it not for Del Stork, a belt application engineer for Goodyear in Lincoln, Neb.

Watson originally submitted his idea to Goodyear for its recommendations and approval. The idea was rejected because it was felt that conventional belts could not stand up under pumping unit conditions.

However, Stork convinced Goodyear officials that this could be an ideal application for the newly developed Torque Team Plus Belt. This belt is three times stronger than conventional belts and has 1/9 as much stretch.

Goodyear agreed with Stork and approved the application. Time has proven that Stork was correct with his recommendation. With two years of operating experience on over 20 units in the field, not a single belt problem has occurred.

Watson points out that Big Wheels was designed with four major design philosophies in mind, each of which would help operators solve some of the problems that plague conventional gear or chain driven units. The four philosophies were: 1) to make a unit as simple as possible, 2) improve on operating efficiency, 3) use standard parts that have high local availability, 4) and improve on the conventional geometry.

Grooves has successfully achieved each of these design objectives. "Big Wheels" is extremely simple. With fewer moving parts the probability of failure is greatly reduced. There are only eight bearings on the unit, each of which can be changed in the field. In fact, the unit is 100 percent field servicable by less than expert personnel. Simplicity also aids in reducing installation time.

There are five reasons why "Big Wheels" operates more efficiently than conventional units: 1) The Flywheel stores energy during the downstroke to be returned to the system during the upstroke, 2) antifriction bearings are used throughout the unit, 3) varying structural unbalance reduces counterweight requirement, 4) belts transmit power more efficiently than gears, and 5) the geometry creates lower upstroke torque factors.

Grooves chose to use standard off- the-shelf parts so any repair part can be obtained on a loal basis. This will speed any repairs and reduce lost production costs.

Big Wheels has an improved geometry over that of conventional units. The upstroke is achieved in 190 degrees of crank rotation and the downstroke in 170 degrees. This motion improves efficiency, reduces amount of counterweight required, and provides an overall lower upward acceleration of the rod string which is condusive to reduced rod stress.

Little has been done in years past to improve on the old conventional pumping units...that is, until "BIG WHEELS!"

API chief says Reagan must charm Congress

By PEGGY SIMPSON
Hearst Washington Bureau

WASHINGTON — If the oil and gas industry is to succeed in winning deregulation of natural gas, it must persuade President Reagan to turn his charms on Congress early in 1983, an industry spokesman says.

"It depends on what happens in the elections and to the economy — but if it isn't done fairly early next year, we will be in the same spot as now," said Charles J. DiBona, president of the American Petroleum Institute.

One of the industry's major disappointments with the Reagan administration was the failure to push through the deregulation last year, when Reagan still had a head of steam and before the economy worsened.

"But it became too hot. Too many other things went wrong," he said. "This just had a much lower priority."

There was a last chance for Reagan to do some arm-twisting this January or February — but re-election pressures and the dropping economy thereafter precluded any action, he said.

On balance, he gives the Reagan administration high marks, despite a recession that has exacerbated a worldwide oil glut and caused considerable dislocation in the energy industry.

"Reagan has made a clear break with the past. He found it was damned hard to get rid of government regulations but at least he hasn't added more," DiBona said.

He gave the president high marks for resisting early pressures to reverse the oil decontrol steps former President Carter had put in motion and he ridiculed the predictions made then that prices would soar once federal ceilings were lifted.

DiBona praised what he called the "bold steps" by Interior Secretary James Watt to free up most offshore leasing sites "but we have yet to see the effects of this. In on-shore leasing, with the environmentalists' reaction to the wilderness drilling proposals, I have to say we've lost a little ground."

He claimed that the major segments of the industry did not reap the benefits the critics believed it had from the 1981 tax bill and he said, in fact, that the reduction in marginal tax rates had made sales of oil shelters considerably less attractive.

The 1982 tax increase legislation contained a sleeper disincentive to overseas exploration that only now is being calculated but which could cost the industry "billions of dollars," DiBona said.

This provides for taxation of income from exploration projects such as those expected to occur on a major energy frontier such as mainland China, reversing the previous practice of writing off initial costs as losses which meant a tax break of 55 cents on the dollar for every dollar invested.

Now, DiBona said, every dollar invested will be subject to taxes — in contrast to the tax policies governing competitors for the China oilfields from Japan, Germany and other countries.

"Some individual companies say it will cost them many millions of dollars. Overall, the costs will run into the billions," DiBona said. "It puts us at a great competitive disadvantage."

Who was responsible? The key Republicans in the Senate sponsored the punitive provision, DiBona said, and although the administration protested it was against it "they weren't willing to upset the whole tax bill to do anything about it."

In a wide-ranging interview, DiBona also said:

— even if this is a 1-in-100 cold winter as some experts predict, the country will not run short of heating oil "unless there is a Middle Eastern disruption." The industry would have no trouble adding extra supplies on short notice, he said, and he saw no major price increases.

— prices are expected to rise for natural gas, probably as much as last year's increase, but this still will put the cost at less than two-thirds of that of heating oil. The price increase for consumers is exacerbated because industrial users already have been charged the limit, he contends.

— he predicted the oil industry "may be at a period of moderate growth after the shake-out" caused by the worldwide oil glut and the simultaneous recession. Lower sales prices for oil have been somewhat mitigated by lower costs of leasing land and equipment.

— the main victims of the energy convulsions have been those who believed oil prices would keep rising "and would be at $42 a barrel heading for $72," he said. "Now we're back to more cautious and stable practices with a more balanced expectation about the future."

Roughnecks, wildcatters founded West Texas towns

By PATRICK DEAREN
Staff Writer

Like the 1849 California and 1897 Klondike gold rushes that spawned men who lived fast and died hard, the discovery of black gold in West Texas produced its share of hard drinking wildcatters and roughnecks who built the shanties and frequented the saloons that were to become towns like McCamey, Crane and Andrews.

No town ever had as swift a genesis as McCamey, named for oil pioneer George McCamey who drilled in the mesa land of Upton County and persuaded the Orient Railroad to build a spur to the site.

The railroad marked its depot with the sign "McCamey," and a tent city without plan or order soon was erected. In the fall of 1926 a Corpus Christi real estate firm laid out the town, with the assigned roadways sometimes running directly through tent shelters.

The firm began leasing lots at $100 for 15 years, with the astounding provision that construction must be begun within an hour.

To those men lured to this spot at the base of King Mountain by "Texas tea," the stipulation was no problem. The initial deed was signed by T.A. Ohlhausen of San Angelo, and within half an hour he had begun work on a gas station-cafe.

THE SHACKS SPRANG up around it, and within six months the population of McCamey had burgeoned to more than 10,000.

Under this great mass of humanity, the streets soon deteriorated, especially when rains fell. Some men, it is said, made livings by pulling autos out of the muck with burros.

Although one class of residents was hardworking and sober, others took advantage of such spots as the Trice Hotel, Bloody Bucket or Green Parrot, where gamblers and prostitutes plied their trades. The lawlessness which reigned and the outrageous prices prompted the larger oil companies to establish camps for their employees.

McCamey is quiet and peaceful today; it long since has outlived its one-time reputation as one of the wildest towns in the Southwest. But with its sobriety came less desirable qualities: its population dwindled steadily until today only 3,500 or so persons walk the streets still haunted by the spectres of a boom town.

The origin of McCamey's sister city Crane is shrouded by time though it, too, likely came as the result of man's greed for black gold. According to legend, two wildcatters named Bert Fields and George M. Church broke a wheel on their drill rig truck in the fall of 1925. Taking it as an omen, they set up their rig on the spot and began drilling, striking oil on what was to become known as the McElroy Field.

MISFORTUNE SEEMS to fill the varying legends of Crane's genesis. According to another story, O.C. Kinnison was driving north from McCamey in 1926 when his car had a flat. Reflecting on the countryside as he changed the tire, he decided to plat a townsite and initiate a real estate office.

Because of the oil boom, goes the story, roughnecks and wildcatters soon brought him business, living in tents and buildings as crude as the oil itself. All was not rosy, however: It's reported that he received a severe beating by gamblers when he invited a preacher to live there.

Like McCamey, Crane also had its share of sin spots, according to legend. When the first county officials were sworn in, goes one tale, a Bible couldn't be located anywhere in town so officials were asked to place their right hands on a Sears and Roebuck catalog.

As persons swarmed into the town, one man saw opportunity knocking and established a gas station — a tent which, with the first storm, was gone with the wind. He continued "pumping" gas, however, pouring it by hand from five-gallon containers hauled in by Model-T truck.

Although organized as a county in 1887, Crane County never had functioned as such because the necessary souls did not venture into the legendary land of Castle Gap and Horsehead Crossing. With the sinking of the first well by Fields and Church, however, all that was to change: Its 27-person population boomed before settling down to its present population of some 4,000.

The boom hit Andrews in 1929, when Deeprock Oil Company discovered the black lifeblood in land leased from C. E. Ogden. The morning after the discovery, says legend, 600 scouts deluged the countryside signing leases.

BUT THE GREAT stock market crash occurred that year as well, plummeting the nation into a depression that almost sapped the life from the infant city. However, leave it to realtors to glamorize even the most undesirable of situations, as the firm of Grafa and Garlinton advertised Andrews in the Midland newspaper as the "land where opportunity awaits."

Just as the nation began pulling out of its economic woes, an event occurred near Andrews that likely preserved its existence — Humble Oil Company brought in 16 producing wells and two gas wells in 1936.

On a smaller scale, Andrews, Crane and McCamey — like their sister oil towns of Snyder, Wink, Kermit, Monahans, Iraan — are booming again under the influx of persons from throughout the nation. Only now, they are subtle booms, lacking the ubiquitous gamblers, prostitutes and sharkies.

And, unfortunately, the legends as well.

Gemini shows new goods

Gemini Industries Inc. of Belle Chasse, Louisiana, is one of many organizations that has supported and exhibited with the Permian Basin Oil Show over the years.

The success story of the company can be directly attributed to the resourceful, energetic, sales oriented Arthur M. Hayes, a proven entrepreneur. He pioneered selected products that have lent a great deal toward the economical operation of diesel engines in the market place, and he had the ability to surround himself with qualified people in the field.

The exhibit this year is unique in that for the first time, Gemini Industries Inc. will be exhibiting (and through demonstration units, show) the three backbone products the company now manufactures and distributes on a national basis.

These products are:

— The "New and Improved Original" Gemini Fuel Water Separator.

— The unexcelled Gemini Extractor Oil Purifier System.

— The improved, efficient, easily installed, unquestionably simple, oil and engine saving Gemini Everfill Oil Level Regulator.

Gemini Industries, Inc. will once again make its contribution toward the success of the Permian Basin Oil Show.

A Cleaner Home Is Automatic With STEAMATIC
"Beautify For the Oil Show"
STEAMATIC OF THE PERMIAN BASIN
Steamatic Means Cleaner Homes & Offices & Restaurants & Stadiums & Hotels & Airports.
- Steamatic's controlled heat cleaning system cleans deep-down to carpet fiber base
- Extracts ground-in dirt that causes deterioration of carpet fibers
- No carpet pile distortion or fuzzing – even in thick shag carpets
- Protects and preserves the color and beauty of fine carpets
- Carpets stay cleaner longer
- Exclusive cleaning system protected by 8 patents
- Extracts hard-to-remove spots and stains
"We clean Furniture and Drapes 100 brite Dry Cleaning
Fire & Water Damage
- Restores carpet pile to almost new appearance and resiliency
- Removes or destroys more allergy-carrying particles and bacteria
- No shampoo or soap residue to cause rapid dirt build-up
- Eliminates long, inconvenient drying time
- Absolutely safe for all carpeting and rugs
Authorized Applicator Scotchgard Carpet Protector

What oil industry earns

By VIC OSTROWIDZKI
Hearst Washington Bureau

WASHINGTON — Do you believe that the oil business is an unusually profitable American industry?

If you do, then join the crowd.

Oil industry officials insist, however, that such an impression is wrong.

Most public opinion polls confirm there is a general belief across the country that the oil companies are raking it in.

One such survey by the Public Opinion Index reported recently that the public estimates oil industry after-tax profits on sales to be about 62 cents on each dollar.

Actually, oil industry profits on sales, after taxes, were 5 cents per dollar in 1981.

Industry spokesmen concede, however, that from time to time the oil industry's profits are relatively higher than the national industrial average.

In the past 10 years, oil industry profits rose sharply and briefly during two periods: after the Arab oil embargo of 1973-74 and again following the fall in Iranian oil production in 1979.

But these periods have not been typical for the petroleum industry, said a spokesman for the American Petroleum Institute (API).

Since the late 1960s, oil companies in some years have been less profitable than other American manufacturing companies and have for the entire period been about as profitable as other industries, he said.

In 1979, according to Citibank data on a wide range of oil companies, the return on stockholders' equity in oil companies was 22.6 percent compared with 18.4 percent for total manufacturing.

The year 1980 was even better for petroleum: 25.4 percent compared with 16.5 percent for total manufacturing.

In 1981, the return on stockholders' equity for the petroleum industry dipped to 20.2 percent -- still a very good year, although one ending on a downward trend. The return on the rest of U.S. manufacturing in 1981 was 15.7 percent.

Preliminary data for the first half of 1982, Citibank said, show the rate of return on stockholders' equity was down to 13.1 percent for a sample of leading oil companies and 11.9 percent for a sample of non-oil companies – or close to the same level. The joint decline reflects the deepening national recession.

Industry spokesmen emphasized that the three years of 1979, 1980 and 1981 were not typical.

For the years 1968 through 1981 median net income as a percent of stockholders' equity was about the same for oil companies and total manufacturing: 14.3 percent for oil companies and 14.9 percent for total manufacturing.

During the period analyzed, petroleum was ahead of total U.S. manufacturing in eight of these years and behind it in six.

This model 1600 Oilfloat made by Trail King Industries of Mitchell, S.D., handles a capacity of 80,000 pounds. It and other Trail King equipment will be on display at the Permian Basin Oil Show in Odessa.

Trail King line of oil field trailers to be exhibited

Trail King Industries of Mitchell, South Dakota, manufacturer of a full line of trailers for oil field, construction, and agricultural uses, will be showing its products at the Permian Basin Oil Show.

The company has introduced the Model 1600 Trail King, an 80,000-pound capacity trailer with two 25,000-pound axles.

Standard equipment includes 10:00 by 20-14PR Michelin tires, Hutch H900-50 suspension, tail roll with pin sockets, front half roll with winch hook and folding park stands. A third axle for 100,000 pound capacity requirements is offered as one of many options.

As a 20,000 pound capacity trailer, the Model 1700 features an inverted fifth wheel and 9:00 by 20-10 PR tires.

Victaulic shows Swinger

The SWINGER check valve, Series 712, has been introduced by Victaulic Company of America. The new swing check valve features grooved ends for fast installation with two Victaulic couplings. The bonnet access, through a Victaulic grooved closure, eases in-line maintenance or coating before installation, of particular importance for oilfield and other critical services.

Available in 2 through 4 inch sizes, Swinger is rated for services to 300 psi. The full port opening provides excellent flow characteristics and permits easier passage of pigs, spheres or scrapers. A bumper bonded to the stainless clapper reduces damage to valves which are coated. The housing is a rugged ductile iron casting, as is the bonnet cap and closure. The standard clapper disc and pin are 316 stainless steel for corrosion resistance. A nitrile seal, for oil services, and EPDM seal for water services are available, with optional Viton for harsher corrosive services.

For details, write Victaulic Company of America, Easton, Pa. 18042. In Canada, Victaulic Company of Canada Limited, Rexdale, Ontario M92 5N7.

Victaulic Company of America is introducing the "SWINGER" check valve, series 712, featuring new grooved ends for fast installation with Victaulic couplings. The company originated the grooved piping method of mechanically joining pipe in the 1920s.

Steve Biggs

Nobody can tell you more about Cessna Citations than Steve Biggs

Steve is Cessna's factory-direct Citation Sales Manager in the Midland/Odessa area. He's ready to show you a new Citation and prove why it's the most fuel-efficient, most sought after business jet in the world.

Steve will have a new Citation II on display at Airmarc Aviation, Schlemeyer Field, Odessa, during the Permian Basin Oil Show, October 20-21.

For a personal showing, give him a call at (512) 735-6983. And ask him about Cessna's new Company Airline™ program and the special opportunities—extremely low cost being one of them—it offers companies wanting to step up to a jet.

CESSNA/CITATION

To some, luxury items are not a luxury, but a necessity. This is evident in their homes, the clothes they wear and the cars they drive. The La Jolla is a pool designed for those who desire the very Best.

Pools of Distinction
by
Golden

First time offered in Midland, Tx.

The La Jolla is a 100% Automatic Swimming Pool. Features include: * Automatically backwashes filter when needed * Automaticaly adds chlorine when needed to 0.1 TPM * Automatically adds acid to 0.1 P.H. unit * Automatically cleans steps, benches, love seats, and therapy pools without floating devices to impair swimming (no hoses in pool wall or floor). Reduces expensive electrical cost. Lifetime warranty. * Automatically heated electrically 7 days a week with a Airaqua 2000 Heat Pump for around $1.00 a day. Ideal for all elec. homes.

5 year warranty on compressor unit.
Thermastatically controlled, will pay for itself in one year on electric savings alone.

Fully Gunited, custom - built & designed to fit your yard and personality.

Part of the routine of finding good oil and gas prospects involves digging through paperwork. Independent landman and geologist Curtis Pool spends another morning researching well logs and scout tickets at Midland's Subsurface Library.

Pipe joiner to be shown

A mechanical pipe joining system far less costly than welding, but with quality as strong, is a feature of AMF Tuboscope's 1982 Permian Basin Oil Show display.

The system, called Crimp-Kote, joins pipe with a close-tolerance, interference fit connection that is crimped upon assembly. Independent laboratory tests show the joint as strong as the pipe itself, and the joint can be assembled two to three times faster than pipe can be welded, usually with two-thirds fewer crew members than a welding crew.

Pipe slated for Crimp-Kote installation is first prepared by forming bell and swedge ends at a Tuboscope facility. Pipe may then be internally coated or not, depending on the requirements of the line.

In the field, bell and swedge ends are brought together in a hydraulic joining tool. An epoxy is used to lubricate the jointing and seal later. The tool setting determines the joint depth and crimp, eliminating chances for overstressing or understressing the metal.

Independent laboratories have tested joints in seamless and ERW pipe. Strengths are at least equal to that of the pipe itself.

Details of the Crimp-Kote system will be available at the AMF Tuboscope booth, No J34 and 35.

Seattle firm bringing separator to Basin oil show

SEATTLE — MARCO Seattle has developed a fully-automatic oil/water/solids separator that effectively cleans produced water for waterflooding.

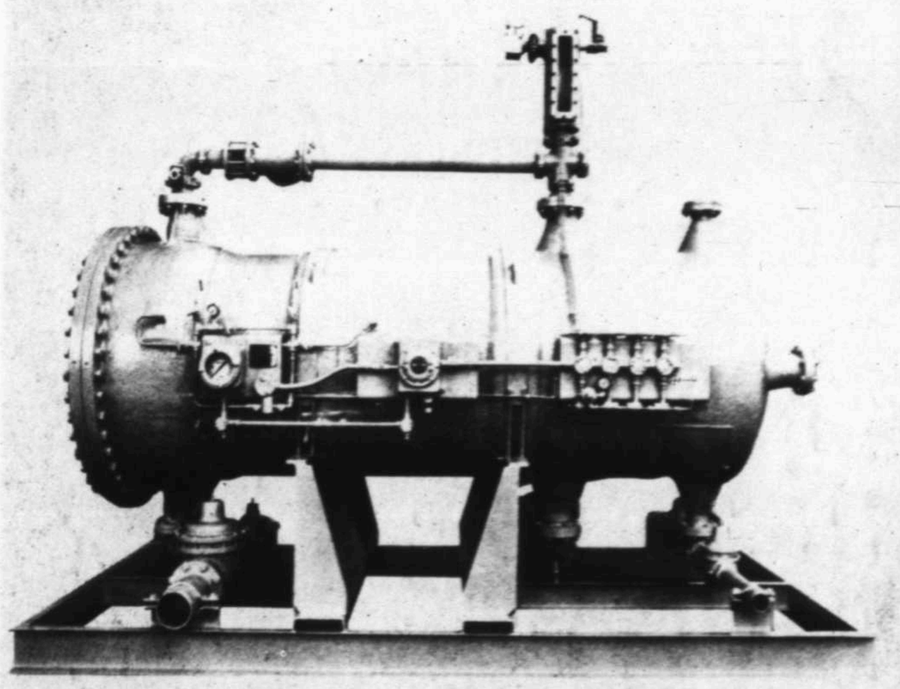
Designated Model FTS-48, the Flo-Thru Separator removes oil and solids from produced water at rates up to 16,000 BWPD. Only four feet in diameter and 13 feet long, this compact separator is an advancement in oil/water separation because of its simplicity and economical, automatic operation. MARCO officials point out that the FTS, designed to be "virtually foolproof," operates continuously and unattended.

The MARCO Flo-Thru Separator has been field-proven with units on line at several West Texas and New Mexico waterfloods. At one major oil company installation, three separators have processed more than 1,000,000 barrels of water in ten months of uninterrupted operation. These units were put in line between the free-water knockout and the injection-pump feed tanks; their preformance has been excellent.

The FTS uses a special, patented foam pack as its separation medium and normally needs no chemical additions. When required to clean itself, the separator automatically runs through a five-minute regeneration cycle. During this time, the foam pack is compressed and approximately ten barrels of recovered liquid are discharged into a tank where the mixture breaks rapidly into oil, water, and sludge.

The oil is either skimmed off to a sale oil tank or reprocessed with the water through a free-water knockout or gun barrel. Following regeneration, the FTS immediately resumes normal operation.

MARCO has established a service office in Midland, to provide prompt assistance for Permian Basin customers. For more information, contact the Midland office at 1801 North Midland Drive No. 235, Midland, 79703, (915) 697-7335.



MARCO SEATTLE has developed a fully automatic oil/water/solids separator that effectively cleans produced water for waterflooding. The company has placed several Flo-thru Separators on line with waterfloods in West Texas and New Mexico.

OIL FACTS

Wildcatting in search of new fields increased 29.8 percent for independents and 7.6 percent for major oil companies in 1981, says Petroleum Information Corporation. Total wells completed were up 27.4 percent over 1980 for independents and 14.1 percent for the majors.
